#### Investment thesis

SHR raised THB7.5b at THB5.20/shr during its IPO in Nov-19. Its share price has fallen since then, mainly due to operating losses from two hotels under the Crossroads Maldives project and the impact from the COVID-19 outbreak.

Maldives has reopened its borders to international tourists since 15 July 2020. SHR's two hotels in Maldives (43% of total revenue as of 9M20) should capture the strong tourism recovery during the high season from Dec-Apr. Meanwhile, other hotels in other countries (Thailand and Fiji) should continue to recover in 2021 along with global tourism.

SHR's share price is attractive as it is trading at a deep discount to its replacement cost value of THB5.0/shr and has a potential upside from M&A deals, considering that it has a strong balance sheet with only 0.5x D/E as of 9M20.

# Catalyst

Key growth drivers include 1) a faster OCC ramp-up rate following a global tourism recovery; 2) the availability of a COVID-19 vaccine; and 3) M&A deals

#### Risk to our call

Downside risks to our DCF-based target price include 1) extraordinary events such as political turmoil and natural disasters; 2) a higher hotel room supply, which may result in price competition; and 3) the slower-than-expected recovery of international tourist numbers.

# Maldives hotel industry is on the road to recovery

Maldives has reopened its borders to international tourists since 15 July. Tourist arrivals have steadily increased m-m. A total of 67,564 tourists have arrived in Maldives between 15 July and 25 November. The key tourist arrival markets are Russia (22% of total tourists), India (11%) and the UK (8%). Based on 27.2k tourist arrivals during 1-25 November, tourist arrivals have recovered to 24% of pre COVID-19 levels (monthly tourist arrivals were 142k in 2019).

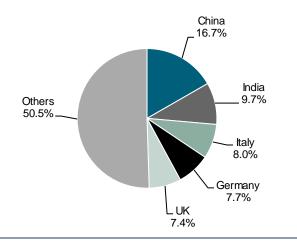

In addition, the Maldives government has allowed 'split stays' since 31 August, permitting tourists to travel from one resort to another to enable longer stays in the country during holidays. The average length of stay for tourists after reopening the borders has been 10.3 days – longer compared to 6.3 days in 2019.

As of 25 November, 368 facilities (resorts, hotels and safari vessels) have reopened, accounting for 38% of registered facilities. Based on the Maldives Ministry of Tourism, OCC has gradually ramped up to 8% in September. We do not have a more recent update on OCC in October and November from the ministry. However, it should significantly improve following the higher tourist arrivals. According to STR, OCC ramped up to 26% on 26 October.

### **Expect more tourist arrivals due to more upcoming scheduled flights**

As of 25 November, 16 airlines have resumed operations, and the Maldives government expects 26 airlines to resume operations by the end of this year. We estimate that currently there are c124 flight movements from/to Maldives per week, accounting for only 29% of the 428 flight movements per week average as of 2018 from 38 operating airlines. Thus, we expect tourist arrivals to accelerate in December up to 1Q21, along with an increase in flight movements.

# SHR's two Maldives hotels are expected to hit 70% OCC by Dec-20

SHR reopened its two hotels in Maldives (SAii Lagoon Maldives and Hard Rock Hotel Maldives) under the name of 'Project Crossroads' on 15 July. The OCC for these hotels has gradually ramped up to a recorded average of 9% in 3Q20. However, SHR provided the latest data in its analyst meeting, noting that OCC has increased to 21% in October, and expects it to jump to 41% in November and 70% in December, based on forward bookings.

The overall OCC of SHR's Maldives hotels is better than the average for Maldives hotels. We believe this is due to its key advantage in that the two hotels are easy to access by speed boat, within 10-15 minutes from Male. The OCC in 4Q20 should be sufficient to surpass the OCC EBITDA breakeven threshold of 30-40%.

### RECOMMENDATION STRUCTURE

### Stock ratings

Stock ratings are based on absolute upside or downside, which we define as (target price\* - current price) / current price.

BUY (B). The upside is 10% or more.

HOLD (H). The upside or downside is less than 10%.

REDUCE (R). The downside is 10% or more.

Unless otherwise specified, these recommendations are set with a 12-month horizon. Thus, it is possible that future price volatility may cause a temporary mismatch between upside/downside for a stock based on market price and the formal recommendation.

\* In most cases, the target price will equal the analyst's assessment of the current fair value of the stock. However, if the analyst doesn't think the market will reassess the stock over the specified time horizon due to a lack of events or catalysts, then the target price may differ from fair value. In most cases, therefore, our recommendation is an assessment of the mismatch between current market price and our assessment of current fair value.
