## Surfing the GRM growth wave

### Weak 3Q21 net profit of THB691m should mark the bottom quarter

We expect SPRC to post a weak q-q net profit of THB691m in 3Q21, down 11% q-q but up 158% y-y. We project its core net profit to decline to a net loss of THB84m, down from THB228m in 2Q21 but up from a net loss of THB291m in 3Q20. Key expectations are 1) a q-q lower market gross refining margin (GRM) to USD2.48/bbl, down from USD2.65/bbl in 2Q21 due to the higher crude premium that was partly offset by the rising product margins; 2) a lower utilisation rate to 75%, down from 77% in 2Q21, due mainly to the planned shutdown of its residual catalytic cracking unit for 15 days starting from 27 Sep-21; 3) a q-q lower inventory gain of USD25m (THB0.8b), or USD2/bbl; and 4) an FX loss of USD5m.

### Expect a strong 4Q21 net profit of over THB2b

Starting in 4Q21, we expect SPRC's quarterly net profit to rebound markedly, driven by three factors. First, we project a q-q and y-y higher market GRM of over USD4/bbl, driven by 2x q-q higher margins of diesel and jet-Dubai and an improving gasoline-Dubai margin by USD2-3/bbl q-q on the back of higher demand after the global reopening and the substitutional impact from the gas and coal price spikes. Second, we forecast a q-q higher utilisation rate to 78-83%, or over 135kbpd, as a result of the expected demand recovery for both domestic and export markets and a significant rise in the jet-Dubai margin, allowing SPRC and other refiners to ramp up their utilisation rates to optimum levels of over 80%. Third, we expect an inventory gain of THB0.5b-1.0b in 4Q21 due to the rising crude oil price.

### GRM uptrend of over USD4/bbl should continue into 2022

We believe SPRC's market GRM should remain high at above USD4/bbl in 2022, thanks to the higher projected demand from the global economic reopening that should boost transportation activities. The hefty coal and gas prices should also help sustain its margin. We expect the elevated prices to continue into 2022 due to the structural undersupply and strong demand during the upcoming winter, which we think will last until 2Q22.

### An attractive refinery pure play to ride the higher GRM wave

We maintain BUY and raise our target price from THB11, previously based on 7.6x 2021E EV/EBITDA, to THB13.5, now based on 7.8x 2021E EV/EBITDA, to reflect our more positive view on SPRC's GRM outlook which has prompted our 18% EPS upgrade for 2021.

### Investment thesis

With IMO 2020 coming into force in Jan 2020 – limiting the sulphur content in fuel oil used by the shipping industry – we think SPRC faces a potential downside risk from a lower fuel oil-Dubai spread; but this should be offset by a widening diesel-fuel oil spread. While purely a refinery business, SPRC’s earnings sustainability comes from its low-cost structure, high crude flexibility, and high operational efficiency, supported by its parent, Chevron.

We think SPRC’s earnings will continue to grow in 2021-22, driven by sustainable earnings from a higher market gross refining margin (GRM) and its low-cost structure.

### Company profile

SPRC is a subsidiary of US-based Chevron, with capacity of 165kb/d. Its competitive, low-cost structure and high crude consumption flexibility are key to sustaining its high market GRM.

### Catalysts

Higher refinery utilisation rates and a higher market GRM are key potential earnings drivers.

### Risks to our call

TP is based on EV/EBITDA. Downside risks are a sharp rise in oil price and weak demand for refined oil products.

### Event calendar

### Key assumptions

	2021E	2022E	2023E
Utilisation rate (%)	85.0	95.0	95.0
Market GRM (USD/bbl)	4.1	5.1	5.8
Dubai crude price (USD/bbl)	65.0	60.0	60.0
Gasoline-Dubai spread (USD/bbl)	10.0	14.0	16.0
Jet-Dubai spread (USD/bbl)	5.0	12.0	15.0
Diesel-Dubai spread (USD/bbl)	6.0	15.0	15.0
Fuel oil-Dubai spread (USD/bbl)	(3.0)	(7.0)	(7.0)
Crude premium (USD/bbl)	3.7	4.5	4.5

### Earnings sensitivity

- For every 1% increase in average Dubai oil price, we project that 2021 earnings would rise by 2.8%, and vice versa, all else being equal.
- For every 1% increase in market GRM, we project that 2021 earnings would rise by 2.5%, and vice versa, all else being equal.
- Stability in crude oil price, rising diesel cracks and low crude premiums are key for earnings growth.

**Disclaimer:**

The disclosure of the Anti-Corruption Progress Indicators of a listed company on the Stock Exchange of Thailand, which is assessed by Thaipat Institute, is made in order to comply with the policy and sustainable development plan for the listed companies of the Office of the Securities and Exchange Commission. Thaipat Institute made this assessment based on the information received from the listed company, as stipulated in the form for the assessment of Anti-corruption which refers to the Annual Registration Statement (Form 56-1), Annual Report (Form 56-2), or other relevant documents or reports of such listed company. The assessment result is therefore made from the perspective of Thaipat Institute that is a third party. It is not an assessment of operation and is not based on any inside information. Since this assessment is only the assessment result as of the date appearing in the assessment result, it may be changed after that date or when there is any change to the relevant information. Nevertheless, FSS International Investment Advisory Company Limited does not confirm, verify, or certify the accuracy and completeness of the assessment results.

Note: Companies participating in Thailand's Private Sector Collective Action Coalition Against Corruption programme (Thai CAC) under Thai Institute of Directors (as of June 24, 2019) are categorised into: 1) companies that have declared their intention to join CAC, and; 2) companies certified by CAC.

## RECOMMENDATION STRUCTURE

### Stock ratings

Stock ratings are based on absolute upside or downside, which we define as  $(\text{target price}^* - \text{current price}) / \text{current price}$ .

**BUY (B).** The upside is 10% or more.

**HOLD (H).** The upside or downside is less than 10%.

**REDUCE (R).** The downside is 10% or more.

Unless otherwise specified, these recommendations are set with a 12-month horizon. Thus, it is possible that future price volatility may cause a temporary mismatch between upside/downside for a stock based on market price and the formal recommendation.

\* In most cases, the target price will equal the analyst's assessment of the current fair value of the stock. However, if the analyst doesn't think the market will reassess the stock over the specified time horizon due to a lack of events or catalysts, then the target price may differ from fair value. In most cases, therefore, our recommendation is an assessment of the mismatch between current market price and our assessment of current fair value.

### Industry Recommendations

**Overweight.** The analyst expects the fundamental conditions of the sector to be positive over the next 12 months.

**Neutral.** The analyst expects the fundamental conditions of the sector to be maintained over the next 12 months.

**Underweight.** The analyst expects the fundamental conditions of the sector to be negative over the next 12 months.

### Country (Strategy) Recommendations

**Overweight (O).** Over the next 12 months, the analyst expects the market to score positively on two or more of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.

**Neutral (N).** Over the next 12 months, the analyst expects the market to score positively on one of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.

**Underweight (U).** Over the next 12 months, the analyst does not expect the market to score positively on any of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.
