Winner on reopening & disruptions

Turning around in 2022, led by the recovery of IE land sales

AMATA, Thailand's leading industrial estate (IE) operator, has suffered from the Covid pandemic due to the lockdowns and travel restrictions. The tables should be turned in 2022 following the country's reopening plus the favourable macro environment due to the investment relocation to diversify the supply chain risk. We expect earnings growth of 44%/18% in 2022/23, driven by 1) the recovery of land presales in Thailand to 600-700 rai; 2) solid demand for land presales in Vietnam; and 3) stable recurring income from its utilities, rental, and power businesses.

Pent-up demand to boost land sales in Thailand and Vietnam

IE land sales in Thailand plunged 67% y-y in 2020 to 212 rai. We expect it to recover to 400 rai in 2021, though still below Amata's 5-year average of 544 rai (2015-19). We think Thailand's Covid situation should bottom out in 3Q21, and estimate that AMATA's land presales should rebound to 600-700 rai per year in 2022-23. For Vietnam, AMATA currently has 770 rai (123 ha) of land available for sale, of which c212 rai (33.9 ha) was already sold for solar panel manufacturing and is being transferred within 4Q21. We see the potential for higher land demand from this client as well as a number of automotive and pharmaceutical firms, and expect the currently available land for sale (up to 770 rai) to be sold in 2022.

Windfall from global investment relocation

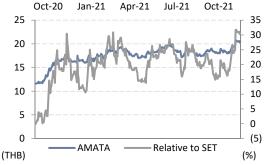

On top of the pent-up demand recovery, we see multiple tailwinds which could boost FDI in Thailand in 2022-23, comprising: 1) global relocation due to the US-China trade war; 2) the zero-emissions policy in China; 3) energy shortages in China; 4) rising electricity costs for industrial usage; and 5) the weakening Baht trend. Given that FDI in China totalled USD187b in 2019 vs USD7.1b for Thailand, we think Thailand could benefit from some FDI shifting from China to Thailand for supply chain diversification, which should drive up the country's land presales demand.

A prime beneficiary of travel restriction easing

We initiate coverage of AMATA with a BUY rating and an SoTP-based TP of THB27.5. We think AMATA would be a prime winner on the return of FDI after travel restrictions are eased. The current power shortage and environmental issues in China are likely to trigger investment diversification amid the intensifying US-China trade war during the post-Covid era in 2022 onward. AMATA is trading at 15.5x 2022E P/E, or at a slight discount to its 5-year average of 16.2x.

Investment thesis

AMATA is one of the leading industrial estate (IE) operators in Thailand. The IE business has been a victim of the Covid pandemic due to the lockdowns and travel restrictions. The tables should be turned in 2022 following the country's reopening plus the favourable macro environment due to the investment relocation to diversify supply chain risk. Moreover, stagflation (slow economic growth with high inflation) could benefit AMATA, considering that it is one of the key asset plays and is currently trading at deep discounts to its NAV of THB34/shr. Overall, we expect that its earnings could grow by 44%/18% in 2022/23, driven by 1) the recovery of land presales in Thailand to 600-700 rai; 2) solid demand for land presales in Vietnam; and 3) stable recurring income from its utilities, rental, and power businesses.

Company profile

AMATA is a world leading industrial city developer which operates four key businesses: city development, infrastructure and utilities, services management, and investment. Its diversified portfolio provides a cushion from the economic cycle downturn.

Catalysts

Key potential drivers for AMATA are: 1) travel restriction easing in Thailand and Vietnam; 2) power shortages and environmental issues in China which could cause a capital investment relocation to ASEAN, especially Thailand and Vietnam; and 3) government stimulus packages to boost private investment.

Risks to our call

Downside risks to our SoTP-derived TP include 1) lower-than-expected IE land sales and transfers in Thailand and Vietnam; and 2) a lower-than-expected utilisation rate from the utilities business in Vietnam.

Earnings sensitivity

- For every 100 rai increase in IE land transfers in Amata City Chonburi, we estimate 2022 net profit to rise THB400m, and vice versa, all else being equal.
- For every 100 rai increase in IE land transfers in Amata City Rayong, we estimate 2022 net profit to rise THB125m, and vice versa, all else being equal.
- For every 100 rai increase in IE land transfers in Vietnam, we estimate 2022 net profit to rise THB62m, and vice versa, all else being equal.

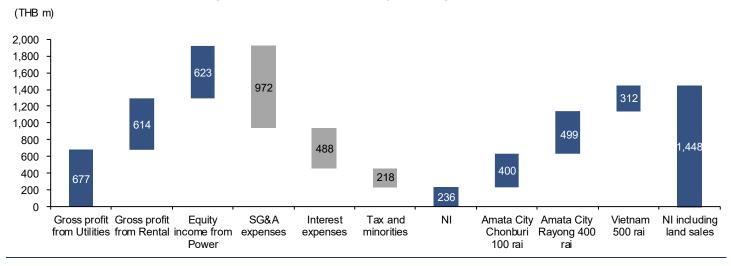

Source: FSSIA estimates

Prime beneficiary of the country's reopening

AMATA is one of the leading IE operators in Thailand. Like other businesses relying on foreign investment, the IE business has been a victim of the Covid pandemic due to the lockdowns and travel restrictions. The tables should be turned in 2022 following the country's reopening plus the favourable macro environment due to the investment relocation to diversify the business disruption risk.

Moreover, we think the likely stagflation (slow economic growth with high inflation) in 2022-23 could benefit AMATA as one of the key asset plays due to its attractive valuation, trading at deep discounts to its NAV of THB34/shr.

Exhibit 1: Positive bottom line during Covid outbreak cushioned by recurring income

Sources: AMATA; FSSIA estimates

We project AMATA to have net profit growth of 44% y-y in 2022 and 18% y-y in 2023, driven by 1) the recovery of land presales in Thailand to 600-700 rai, its pre-Covid level; 2) solid demand for land presales in Vietnam after the country's easing of the full lockdown in 4Q21; and 3) stable recurring income from its utilities, rental, and power businesses as cash cows for AMATA.

Exhibit 2: Expect earnings to pass the pre-Covid level in 2023

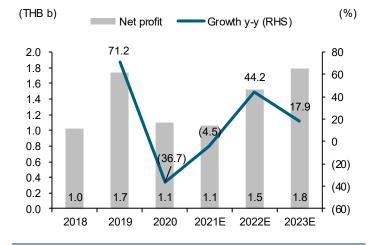

Exhibit 3: Estimate revenue from IE land sales to leap in 2022 onward

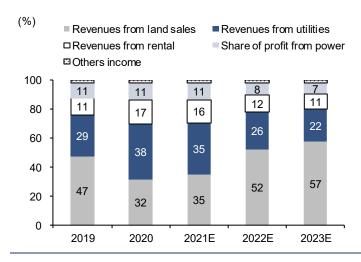

Sources: AMATA; FSSIA estimates

Sources: AMATA; FSSIA estimates

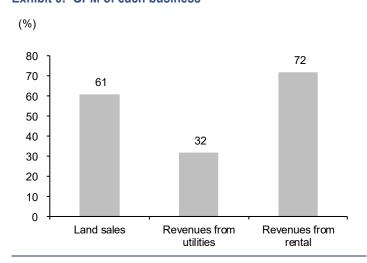

AMATA has a well-diversified business portfolio with a solid recurring income stream from its utilities (water), rental, and power businesses, accounting for 62% of the company's total revenue estimated in 2021. Despite the severe impact from the multiple lockdowns and travel restrictions due to the Covid-19 pandemic in 2020-21, AMATA's net profit remains in the black thanks to its highly resilient earnings from its core business of industrial land sales and the low-risk non-IE earnings, with a high gross margin of 72% for the rental business and 32% for utilities vs 61% for IE.

Exhibit 4: AMATA's revenue structure

Note: We include equity income from the power business into the revenue structure Sources: AMATA; FSSIA estimates

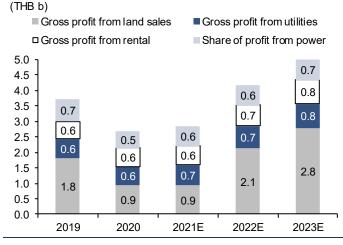

Exhibit 5: GPM of each business

Sources: AMATA; FSSIA estimates

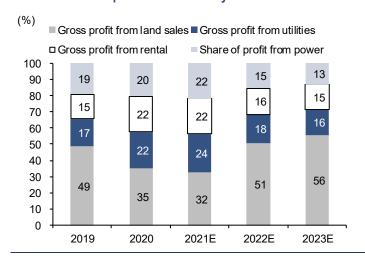

In terms of gross profit, IE normally contributed around 50% of AMATA's total gross profit during the pre-Covid period in 2019, on par with the 47% proportion to total revenue. This reflects that AMATA's revenue and gross profit are growing in tandem with one another thanks to the similar gross profit margin (GPM) levels for IE (61%) and non-IE (60%).

Exhibit 6: AMATA's gross profit structure

Sources: AMATA; FSSIA estimates

Exhibit 7: Gross profit breakdown by business

Sources: AMATA; FSSIA estimates

Expect a strong land sales recovery in Thailand in 2022

While AMATA's core business, IE land sales in Thailand, plunged 67% y-y to 212 rai in 2020, we project the land sales to double y-y to 400 rai in 2021, though still below its 5-year average of 544 rai (2015-19) as a result of the lockdown measures and travel restrictions in both Thailand and Vietnam.

We think Thailand's Covid situation should bottom out in 3Q21, and estimate that AMATA's land presales should rebound to exceed its pre-Covid level at 600-700 rai per year in 2022-23. The key driver, in our estimation, is the pent-up demand for land to be used for new investments in IEs, particularly in the areas covering three provinces in Eastern Thailand – Chacheongsao, Chonburi, and Rayong – under the government's Eastern Economic Corridor (EEC) investment scheme.

AMATA has IEs located in Chonburi and Rayong in the EEC zone, which should incentivise foreign investors to choose AMATA's IEs for their foreign direct investment (FDI) in Thailand.

Exhibit 8: Average selling price and GPM for each of AMATA's IEs

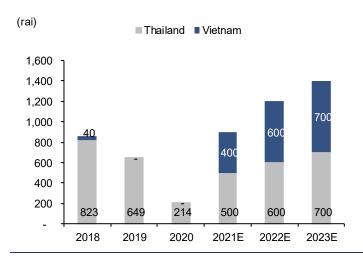

IE	Average selling price	GPM	Cost	Profit
	(THB/rai)	(%)	(THB/rai)	(THB/rai)
Amata City Chonburi	11.0	70	3.3	7.7
Amata City Rayong and Thai-Chinese	4.0	60	1.6	2.4
Vietnam	4.0	30	2.8	1.2

Sources: AMATA; FSSIA estimates

Amata's land sales target is at 1,150-1,350 rai in 2021, comprising 1) 650 rai of land sales in Thailand (100 rai in Chonburi, 100 rai in Thai-Chinese IE and 450 rai in Rayong); and 2) 500-700 rai in Vietnam.

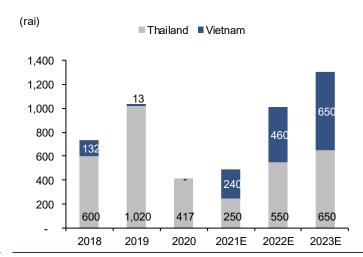

The company has already recognised presales of 343 rai in 1H21 (131 rai in Thailand and 212 rai in Vietnam). AMATA is currently negotiating with over 20 potential customers in a number of Thailand's key export industries (food, rubber, auto parts) and sees a potential land sales demand of 1,000 rai in 2H21, comprising 1) 600 rai in Amata City Chonburi IE and Amata City Rayong; and 2) 400 rai in Thai-Chinese IE in Rayong.

Exhibit 9: IE land sales

Sources: AMATA; FSSIA estimates

Exhibit 10: IE land transfers

Sources: AMATA; FSSIA estimates

Backlog is high in 2H21-2022. AMATA has a land sales backlog of THB2.0b, which it expects to recognise in 4Q21-3Q22, based on the company's guidance. While certain land transfers may be delayed due to the lockdown restrictions in 3Q21, we believe the land transfer should accelerate in 4Q21 onward, given that Thailand's government plans to lift the quarantine for vaccinated visitors in Nov-21, which should allow investors to enter Thailand without any required guarantine period. We expect up to 30-40% of the THB2.0b backlog to be recognised in 2H21, with the remaining backlog to be realised in 2022.

Exhibit 11: Land sales backlog

Vietnam: Attractive FDI destination with plenty of demand for IE land

Among AMATA's two IEs with available land for sale in Vietnam - Long Thanh IE and Halong IE – AMATA is currently focusing more on Halong IE due to its more resilient demand.

Exhibit 13: Amata City Halong

Exhibit 14: AMATA City Long Thanh

Source: AMATA

Source: AMATA

IE #1: Amata City Halong IE has a total development area of 36,238 rai (5,800 ha). The first phase of 4,463 rai (714 ha) has already been granted an investment registration certificate (IRC). AMATA currently has 770 rai (123 ha) of land available for sale, of which c212 rai (33.9 ha) was already sold to Jinko Solar Hongkong (JKH), a Chinese solar panel manufacturer, and is expected to be transferred by 4Q21.

In addition, JKH signed a memorandum of understanding (MOU) in Sep-21 to purchase another 126 rai (20 ha) from AMATA at an average selling price of cTHB3.6m per rai. We see more potential land demand from JKH, as the company plans to invest in the solar energy industry to serve the growing demand for renewable energy in the global market.

Moreover, AMATA is currently negotiating with a few automotive and pharmaceutical firms, which could turn into eventual land sales to fill up the demand for AMATA's currently available land totalling 770 rai within 2022, based on our estimate.

Exhibit 15: IE land sales in Vietnam

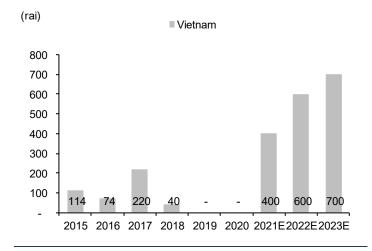

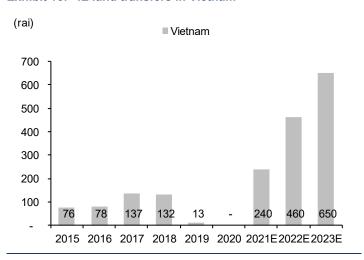

Exhibit 16: IE land transfers in Vietnam

Sources: AMATA; FSSIA estimates

Sources: AMATA; FSSIA estimates

IE #2: AMATA City Long Thanh (ACLT) has a total granted area for development of 6,400 rai, comprising 1,700 rai of IE land for sale and 4,700 rai for commercial areas. ACLT is currently under the land expropriation process with the government, and we expect the first phase of 500-600 rai of IE land to be available for sale in 1H22. AMATA sees a potential pent-up demand of 200-300 rai, which could be immediately turned from available land status into land sales based on customers' intentions.

IE #3: Quang Tri Industrial Park, located in Quang Ninh province in Northern Vietnam, is AMATA's latest IE in Vietnam which is still in an early phase of development. AMATA is in the process of obtaining Investment Registration Certificate (IRC) approval and expects the IE land to be available for sale by 2024-25.

Quang Ninh: Vietnam's attractive site for China's manufacturing relocation

Quang Ninh is a strategic investment location in Northern Vietnam due to two reasons. First, Quang Ninh is the only area in Vietnam that shares both land and sea borders with China. Second, Quang Ninh is located near Guangdong province, one of the main provinces for the light manufacturing industry in China.

Exhibit 17: FDI in Vietnam temporarily dropped in 2021 following lockdowns and travel restrictions

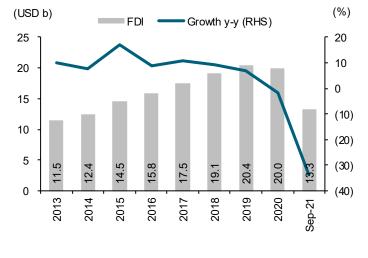

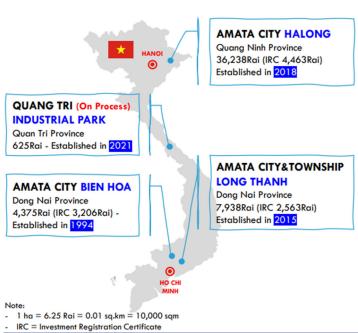

Exhibit 18: AMATA's IE locations in Vietnam

Source: Foreign Investment Agency, Ministry of Planning and Investment of Vietnam

Source: AMATA

Quang Ninh province ranked third for provinces with the fastest growing GDP in Vietnam in 2020, second only after Bac Giang and Hai Phong provinces. Quang Ninh has held the top rank in the Provincial Competitiveness Index (PCI) for four consecutive years, according to the <u>Vietnam Briefing website</u>.

Exhibit 19: FDI: top ten provinces, Jan-Apr 2021

A 'windfall' winner from global relocation

On top of the pent-up demand recovery, we see multiple tailwinds which could boost FDI in Thailand in 2022-23, comprising: 1) global relocation due to the US-China trade war; 2) the zero-emissions policy in China; 3) energy shortages in China; 4) rising electricity costs for industrial usage; and 5) the weakening Baht trend. Given that FDI in China totalled USD187b in 2019, far higher than the USD7.1b FDI in Thailand, we think Thailand could benefit from some FDI shifting from China to Thailand for supply chain diversification, which should drive up the country's land presales demand.

Exhibit 21: FDI in China

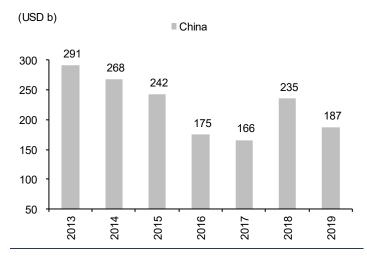

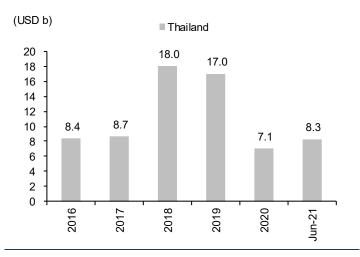

Exhibit 22: FDI in Thailand

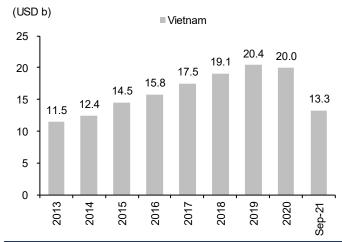

Source: Bloomberg

Sources: Board of Investment (BOI); FSSIA's compilation

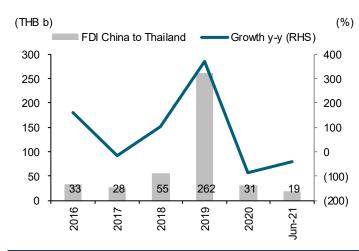

FDI in Thailand significantly jumped y-y in 1H21. As of 2Q21, Thailand has already seen a markedly higher FDI of USD8.3b, even higher than the entire FDI of USD7.1b in 2020. We believe FDI, boosted by the EEC and other investments in the government's promoted industries, including electric vehicles (EVs) and related supporting industries to create an extensive cluster for the EV-driven automotive industry, and other biotechnology and information and platform-based industries, should surpass the USD17b-18b FDI levels in the pre-Covid-19 years in 2018-19.

Exhibit 23: FDI in Vietnam

Sources: Bloomberg; FSSIA's compilation

Exhibit 24: FDI from China to Thailand

Sources: BOI; FSSIA's compilation

However, FDI from China has remained weak in 1H21 after rising to USD262b in 2019 before the Covid-19 pandemic hit Thailand in 1Q20. Nevertheless, we expect FDI from China to surge meaningfully in 4Q21 onward on the back of Thailand's full reopening for tourism and economic activities, along with a number of attractive investment packages from the Thai government, including tax exemptions and strong supportive infrastructure projects like upgrading U-Tapao Airport and the high-speed train linking all major airports in Central and Eastern Thailand.

BOI is another engine to boost FDI and demand for land sales in IEs. Another incentive to draw more FDI into the country is the more attractive investment package from the Board of Investment (BOI) which effectively grants a multi-year tax exemption and reduction for FDI in IEs or the EEC.

In 1H21, the number of investment projects that had applied for the BOI tax privilege had already surpassed the 2020 level of USD6.2b to USD8.3b in 1H21, and we expect the BOI to approve projects worth over USD4b in 2H21, likely bringing the total BOI-approved investments to exceed the 2020 level of USD7.8b.

Exhibit 25: Project value submitted to BOI

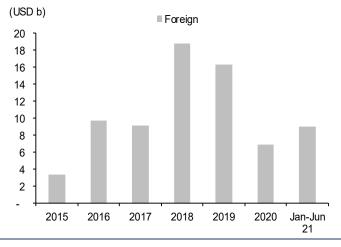

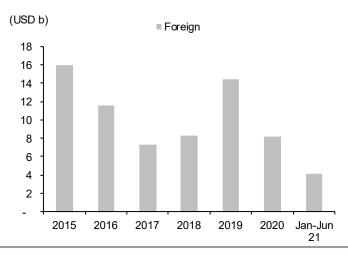

Exhibit 26: Project value approved by BOI

Five key factors to favour FDI in Thailand in 2022-23

We believe five key factors will lead to higher FDI and land sales for AMATA's IEs in 2022-23, including production site diversification, to:

- 1) Reduce the risks from the US-China trade war and supply chain disruption;
- 2) Avoid China's intensifying environmental and emissions control policies for industrial companies;
- 3) China's current power shortage crisis has led to industrial production shutdowns or cuts as mandated by the Chinese government in many provinces;
- 4) The structurally higher energy costs for industrial production in China;
- 5) Weaker THB currency exchange rate.

All of these factors should play a significant role in influencing foreign investors to pick Thailand as one of their overseas investment locations of choice, which could eventually would lead to higher land sales in IEs for Thai IE companies, including AMATA.

1) Global relocation due to US-China trade war

Since 2018, the US-China trade war has caused an investment exodus and the relocation of manufacturing facilities into other countries outside of China. On top of that, the Covid-19 pandemic has increased the incentive to diversify the supply chain from China.

According to the AmCham Supply Chain Survey, 64% of US firms are likely to diversify their supply bases and 24% could relocate manufacturing or sourcing capacities out of China. Hence, the relocation of manufacturers from China should benefit AMATA, which has IEs in both Thailand and Vietnam. in our view.

Exhibit 27: US imports from China fell, imports from rest of world (ROW) rose

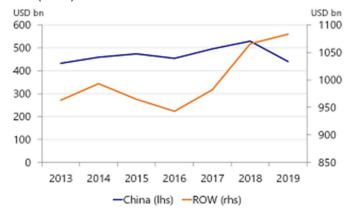

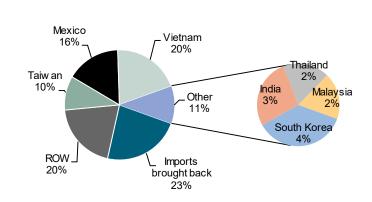

Exhibit 28: Relocation of former manufacturing imports from China (USD88b)

Source: RaboResearch Source: RaboResearch

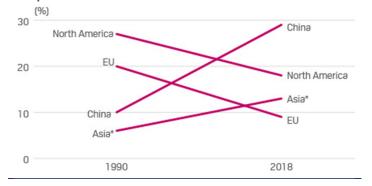

2) China's zero emissions policy leading to business operation difficulties

At the UN General Assembly in Sep-20, China vowed to reach its carbon emissions peak before 2030 and is aiming to achieve net zero carbon emissions by 2060.

China's economic planning agency, the National Development and Reform Commission, released a dual-control plan to restrict energy intensive activities and consumption. China aims to cut its energy intensity (the amount of energy consumed per unit of economic growth) by about 3% in 2021 to meet its climate goals. Provincial authorities have enforced the emissions curbs more strictly since Aug-21 after only 10 out of 30 mainland regions were able to achieve their energy goals in 1H21.

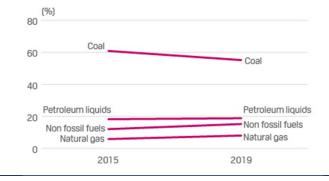

The strict emissions policy is leading to power cuts, as currently more than 50% of China's power generation is derived from coal. Many factories in Jiangsu, Guangdong and Zhejiang, the main industrial provinces in China, received warnings for missing their energy consumption targets. Some factories announced on the Shanghai and Shenzhen stock exchanges that their production output has been hit by power cuts.

Exhibit 29: Carbon emissions from China have increased over past decade

Sources: International Energy Agency (IEA); S&P Global

Exhibit 30: More than 50% of power generated in China is derived from coal

Sources: National Bureau of statistics; S&P Global

3) Power shortage in China

China's zero emissions policy has also contributed to the current power shortage in China following the low investments made in coal mining and the rebound in export demand after the Covid pandemic subsided. Some provincial authorities ordered factories to stop for a few days each week. Power usage has been limited, such as avoiding the use of air conditioners at low temperatures. For example, one factory which normally consumed 1,600kWh of electricity per day was forced to reduce its usage to 640kWh. Moreover, some factories, such as an aluminium manufacturing factory in Dongguan, have had to rely on three back-up generators to run. The cost of renting generators has increased 3x from RMB60k in June to RMB180k currently.

Exhibit 31: Thermal power (mostly coal-fired) remains China's main power generation capacity

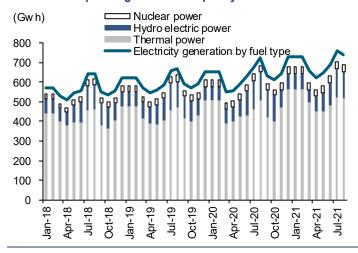

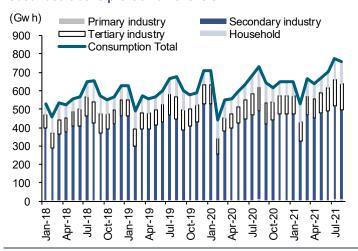

Exhibit 32: China's electricity demand has sharply rebounded above pre-Covid-19 levels

Source: Bloomberg

4) Rising industrial electricity costs

Source: Bloomberg

The current spike in the coal price has already led to significantly higher electricity costs for industrial users in China, and we expect many provincial governments in China to increase their power tariff rates to allow power producers to at least break even or reduce their operating losses. In Guangdong province, the government plans to raise the power tariff by 25% during peak hours for industrial users, while household and non-industrial users would be exempted. The National Development and Reform Commission plans to liberate the pricing for power generation from coal-fired plants, and all industrial and commercial users will buy at the market price. This implies that the average power price for these users would increase by c20% from the current price, in our view.

Exhibit 33: China's electricity generation

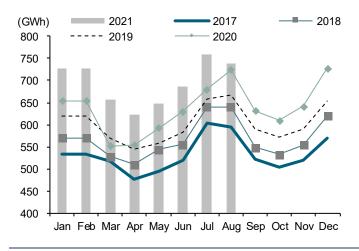

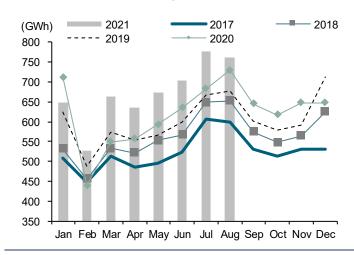

Exhibit 34: China's electricity consumption

Source: Bloomberg Source: Bloomberg

5) Weakening Baht trend

The THB has weakened by c10% YTD against the RMB and VND, making the investment cost much more competitive in Thailand than in China and Vietnam. Hence, the lower investment cost should be another catalyst to make Thailand a more competitive and attractive country.

Exhibit 35: RMB vs THB

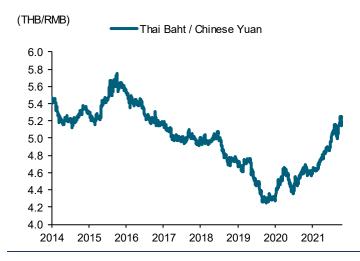

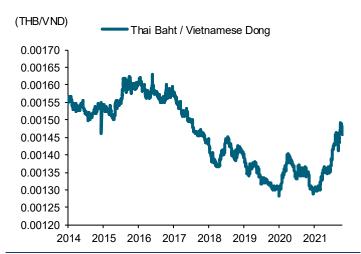

Exhibit 36: VND vs THB

Source: Bloomberg Source: Bloomberg

Earnings downside risk is limited by recurring income stream

AMATA's recurring income can be divided into three parts: 1) revenue from utilities services (water); 2) rental revenue from its logistics business (built-to-suit warehouses and factories); and 3) equity income from its power business. Combined, these businesses contribute 62% of the total revenue and 68% of the gross profit that we estimate for AMATA in 2021.

Exhibit 37: AMATA's revenue structure (2021E)

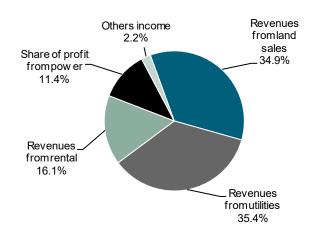

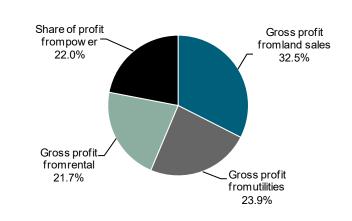

Exhibit 38: AMATA's gross profit structure (2021E)

Sources: AMATA; FSSIA estimates

Sources: AMATA; FSSIA estimates

Utilities (water) has the largest recurring income. AMATA provides raw water, industrial water, wastewater treatment, and facility services at its own IEs, and the business generated revenue of THB1.8b in 2020. We expect its service revenue to grow by 4-5% in 2021-23, premised on 2% y-y organic growth from existing customers at AMATA's IEs and 3% y-y growth from new customers.

Rental income is highly sustainable. Rental income is another source of AMATA's recurring income, which generated revenue of THB0.8b in 2020. AMATA has readybuilt factories with a total leasable area of 445k sqm. The occupancy rates are high at 86% in Thailand and 100% in Vietnam. We expect 7-8% rental revenue growth in 2021-23, driven by new rental spaces and a higher occupancy rate in Thailand.

Exhibit 39: Expect revenue from utilities services to grow 4-5% in 2021-23

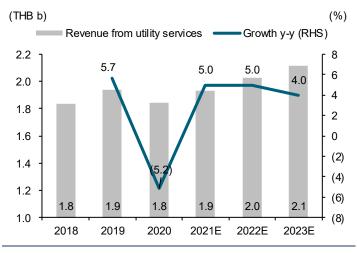

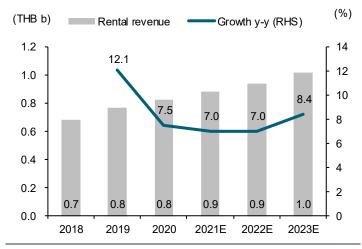

Exhibit 40: Expect rental revenue to grow 7-8% in 2021-23

Sources: AMATA; FSSIA estimates

Sources: AMATA; FSSIA estimates

Power income mainly from SPPs. Equity income from its power and natural gas business was at THB548m in 2020 and we expect it to grow by 13.6% y-y in 2021 to THB623m due to the low base in 2020. We project it to grow steadily at 3% p.a. in 2022-23.

We see upside risks from the two small power producer (SPP) replacements, Amata B.Grimm Power 1 & 2 (ABP1 and ABP2), whose commercial operation dates (CODs) are scheduled to start in 2022 and fully operate in 2023.

Exhibit 41: Details of investment in power business

Sources: AMATA; FSSIA estimates

According to FSSIA's report on B.Grimm Power (BGRIM TB, BUY, TP THB56), "B.Grimm Power (BGRIM TB) - Growth, gas, and green roadmap", dated 2 Jun-21, the new SPP replacement power purchase agreements (PPAs) for ABP1 and ABP2 should generate higher EIRRs of 35% vs 30% previously. This is due to the better operational efficiency of its power plants, as they require less heat to generate power, with energy requirements declining sharply from the current 8,300mmBTU/kWh (vs the Electricity Generating Authority of Thailand (EGAT)'s contracted heat rate of 8,282mmBTU/kWh-8,600mmBTU/kWh) to 7,000mmBTU/kWh (vs EGAT's new contracted heat rate of 7,409mmBTU/kWh).

Valuation and recommendation

We initiate coverage of AMATA with a BUY rating and an SoTP-based TP of THB27.5, comprised of:

- 1) The net asset value (NAV) of the currently developed land and raw land in Thailand;
- 2) The net present value (NPV) of its utilities and rental businesses (7.2% WACC and 2% terminal growth);
- 3) The NPV of its power plant based on AMATA's equity stake (7.2% WACC and 2% terminal growth);
- 4) The market value for its 73% stake in Amata VN (AMATAV TB, not rated) and its 17% stake in Amata Summit Growth Freehold & Leasehold REIT (AMATAR TB, not rated).

We think AMATA will be one of Thailand's key winners on the FDI influx following the easing of travel restrictions and the full economic reopening starting in Nov-21. The current power shortage and environmental issues in China should further trigger an investment relocation to reduce the impact of the US-China trade war and minimise the supply chain risk.

We think AMATA is an attractive investment for the country's upcoming reopening, the pending infrastructure boom, and the industry's ongoing transition to a more diversified production base worldwide. Trading at 15.5x 2022E P/E, or at a slight discount to its 5-year average of 16.2x, AMATA is our top pick in Thailand's IE sector.

Corporate Governance - AMATA

Board structure

Number of Independent Directors (ID)	4* of 7 board members
Percentage of IDs on the board	57%
ID participation/attendance at board meetings	100%
ID participation in audit/remuneration committees	3/3 in audit committee and 3/3 in remuneration committee
ID terms (years of service, re-election/replacement procedures)	9 years consecutively, reappointment subject to the Board of Director's discretion

^{*} One is in the position for over twenty years and the other is around fourteen years.

Source: AMATA

Additional comments: AMATA disclosed in its 2020 annual report (page 106) that the company is still unable to apply the principles from the SEC CG Code 2017 which regulates that 1) The Board of Directors should limit the consecutive years an Independent Director can work in his/her position at 9 years. The Board of Directors must have a sound reason if the Board would like to appoint any Independent Director beyond 9 consecutive years; and 2) The Company should have an external corporate governance specialist or consultant to assist in the guideline set up and Director evaluation at least every 3 years. The results of the work also have to be revealed in the Annual Report.

The company explained that 1) The Company's Board has an appropriate number of members, which is 7. All of the Directors are required to prepare well before the meeting. They understand the operation of the Company. Three Independent Directors have had terms of over 9 years. Each of them is specialized in their field and it is difficult to find others with the same level of expertise to replace. However, the Company has the Policy on Diversity of Directors and a revised Good Corporate Governance Policy with the maximum number of directors not exceeding 12 persons to support the expansion of the Company's business; and 2) The Company performs an evaluation of the Board of Directors as a whole, an evaluation of the sub-committees as respective groups and an evaluation of individual Directors annually. The results of the 2020 evaluation are as follows:

- The average score for the Board of Directors as a whole is 91.31%
- The average score for the sub-committees as respective groups is 92.75%
- The average score for individual Directors is 96.43%

However, the Board of Directors has already assigned the Nomination and Remuneration Committee to study the evaluation via a third-party outside consultant for the upcoming years and report to the Board of Directors for consideration.

Audit Practices

Auditor	EY Office Limited
Length of service	More than 15 years since 2006
Reporting incidents	None
Fee track record	Remuneration to auditors comprise THB7.77m audit fee, and THB2.38m non-audit fee
Policy on change of audit firm	To review every 5 years

Source: AMATA

Additional comments: None

Compensation and remuneration

Directors' remuneration vs earnings/ROE/share performance	In 2020, THB 11.44m vs net profit of THB 1,103.44m
Changes/stability in senior management	Stable
Incidents of termination of senior management	None
Track record on insider sales	None

Source: AMATA

Additional comments: None

Shareholders' rights

Communication - shareholder participation in AGMs/EGMs	AGM annually, EGM as appropriate
Related party transactions	To be observed by the Board of Directors for both direct and indirect connected transactions and others with potential conflicts of interest. All must comply with related laws, company's regulations, and regulations of the SEC, SET and good corporate governance.
Voting issues - policies, incidents of rejected proposals	None

The disclosure of the survey results of the Thai Institute of Directors Association ('IOD") regarding corporate governance is made pursuant to the policy of the Office of the Securities and Exchange Commission. The survey of the IOD is based on the information of a company listed on the Stock Exchange of Thailand and the Market for Alternative Investment disclosed to the public and able to be accessed by a general public investor. The result, therefore, is from the perspective of a third party. It is not an evaluation of operation and is not based on inside information.

The survey result is as of the date appearing in the Corporate Governance Report of Thai Listed Companies. As a result, the survey results may be changed after that date. FSS International Investment Advisory Company Limited does not confirm nor certify the accuracy of such survey results.

* CGR scoring should be considered with news regarding wrong doing of the company or director or executive of the company such unfair practice on securities trading, fraud,

Level

Certified

This level indicates practical participation with thoroughly examination in relation to the recommended procedures from the audit committee or the SEC's certified auditor, being a certified member of Thailand's Private Sector Collective Action Coalition Against Corruption programme (Thai CAC) or already passed examination to ensure independence from external parties.

Declared This level indicates determination to participate in the Thailand's Private Sector Collective Action Coalition Against Corruption programme (Thai CAC)

Disclaimer:

The disclosure of the Anti-Corruption Progress Indicators of a listed company on the Stock Exchange of Thailand, which is assessed by Thaipat Institute, is made in order to comply with the policy and sustainable development plan for the listed companies of the Office of the Securities and Exchange Commission. Thaipat Institute made this assessment based on the information received from the listed company, as stipulated in the form for the assessment of Anti-corruption which refers to the Annual Registration Statement (Form 56-1), Annual Report (Form 56-2), or other relevant documents or reports of such listed company. The assessment result is therefore made from the perspective of Thaipat Institute that is a third party. It is not an assessment of operation and is not based on any inside information. Since this assessment is only the assessment result as of the date appearing in the assessment result, it may be changed after that date or when there is any change to the relevant information. Nevertheless, FSS International Investment Advisory Company Limited does not confirm, verify, or certify the accuracy and completeness of the assessment results.

Note: Companies participating in Thailand's Private Sector Collective Action Coalition Against Corruption programme (Thai CAC) under Thai Institute of Directors (as of June 24, 2019) are categorised into: 1) companies that have declared their intention to join CAC, and; 2) companies certified by CAC.

You can contact the analyst named on the front of this note or your representative at Finansia Syrus Securities Public Company Limited

FSSIA may incorporate the recommendations and target prices of companies currently covered by FSS Research into equity research reports, denoted by an 'FSS' before the recommendation. FSS Research is part of Finansia Syrus Securities Public Company Limited, which is the parent company of FSSIA.

All share prices are as at market close on 20-Oct-2021 unless otherwise stated.

RECOMMENDATION STRUCTURE

Stock ratings

Stock ratings are based on absolute upside or downside, which we define as (target price* - current price) / current price.

BUY (B). The upside is 10% or more.

HOLD (H). The upside or downside is less than 10%.

REDUCE (R). The downside is 10% or more.

Unless otherwise specified, these recommendations are set with a 12-month horizon. Thus, it is possible that future price volatility may cause a temporary mismatch between upside/downside for a stock based on market price and the formal recommendation.

* In most cases, the target price will equal the analyst's assessment of the current fair value of the stock. However, if the analyst doesn't think the market will reassess the stock over the specified time horizon due to a lack of events or catalysts, then the target price may differ from fair value. In most cases, therefore, our recommendation is an assessment of the mismatch between current market price and our assessment of current fair value.

Industry Recommendations

Overweight. The analyst expects the fundamental conditions of the sector to be positive over the next 12 months.

Neutral. The analyst expects the fundamental conditions of the sector to be maintained over the next 12 months.

Underweight. The analyst expects the fundamental conditions of the sector to be negative over the next 12 months.

Country (Strategy) Recommendations

Overweight (O). Over the next 12 months, the analyst expects the market to score positively on two or more of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.

Neutral (N). Over the next 12 months, the analyst expects the market to score positively on one of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.

Underweight (U). Over the next 12 months, the analyst does not expect the market to score positively on any of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.
