3 ผู้บริหารให้ 3 ปัจจัยบวกสำหรับปีทองในปี 2022

เราออกจากการประชุมทางโทรศัพท์กับ 3 ผู้บริหารสำคัญของ IVL พร้อม 3 ปัจจัยบวกเกี่ยวกับ แนวโน้มการเติบโตของกำไรสุทธิของบริษัทฯ ในปี 2022-23 ข้อแรก EBITDA ของธุรกิจ Integrated Oxide and Derivatives (IOD) อาจเพิ่มเป็น USD0.7พันล้านในปี 2022 จาก Oxiteno ที่ซื้อมา อัตรากำไรที่สูงขึ้น และปริมาณที่เพิ่มขึ้น ข้อสองกลุ่ม cPET น่าจะสร้าง EBITDA ในระดับที่ดีโดยอยู่ที่กว่า USD1.3พันล้านในปี 2022 จาก PET-PTA margins รวมที่ อยู่ในระดับสูงอย่างยั่งยืนในอเมริกาและยุโรป ข้อสาม IVL ยังอยู่ระหว่างรอรับรู้ประโยชน์จาก ธุรกิจ Recycling PET (rPET) ตามแผนจากอำนาจในการตั้งราคาที่สูงกว่าและความต้องการ ผลิตภัณฑ์ rPET ที่เพิ่มขึ้นหลังการประชุม COP26

Oxiteno จะช่วยเสริมสร้างพอร์ต IOD และ HVA

จากสินทรัพย์ IOD ของ Oxiteno ในบราซิลและการเริ่มดำเนินงานของ Ethane Cracker ของ บริษัทฯ เราคาดว่า EBITDA ของกลุ่ม IOD จะโตขึ้น 2x y-y จาก USD0.3พันล้านในปี 2021 เป็น USD0.7พันล้านในปี 2022 ซึ่งคิดเป็น 25-30% ของ EBITDA รวมในปี 2022E ที่กว่า USD2.8-3.0พันล้าน จากข้อมูลของ IVLกำลังการผลิต Surfactants รวมในสินทรัพย์ IOD (IVL+Oxiteno) น่าจะช่วยทำให้ IVL ไม่เพียงแต่จับการเติบโตของความต้องการที่คาดไว้ที่กว่า USD40พันล้านในตลาด Surfactants โลกได้ แต่ยังรวมถึงในตลาดสหรัฐฯ (ซึ่งคิดเป็น 35% ของตลาด Surfactants โลกในปี 2020) เราคาดว่า Surfactants เพียงอย่างเดียวอาจสร้าง EBITDA รายปีได้ USD0.2-0.3พันล้านนับตั้งแต่ปี 2022 เป็นต้นไป ในปี 2022 เราคาดว่า ผลิตภัณฑ์มูลค่าเพิ่มสูง (HVA) จะคิดเป็นกว่า 60% ของ EBITDA รวมและ 50% ของรายได้

อะไรทำให้ PET-PTA margin ของ IVL ทรงตัวสูงกว่าอย่างยั่งยืน?

cPET (บรรจุภัณฑ์ PX PTA PET และเคมีพิเศษ) เป็นกลุ่มสินค้าที่ใหญ่ที่สุดของ IVL ด้วย กำลังการผลิตรวม 12mtpa (67% ของกำลังการผลิตรวมใน 3Q21) เราคาดว่า PET-PTA margin รวมที่อยู่ในระดับสูงจะอยู่ต่อเนื่องไปในปี 2022 จากข้อได้เปรียบ 4 ประการ ประกอบด้วย ความสามารถในการร์ไซเคิลที่สูงกว่า โครงสร้างตลาดที่เกื้อหนุน กำแพงขาเข้า รวมถึงราคาและอัตรากำไรตามสัญญาที่อยู่ในระดับสูง ซึ่งทำให้ IVL เรียก Premium ได้ USD500/t จาก PET-PTA margin รวมในเอเชีย (USD820/t เทียบกับ USD300/t ในเดือน ต.ค. 21)

หุ้นเด่นในกลุ่มวัฏจักรไทย

เราคงคำแนะนำซื้อที่ราคาเป้าหมาย 62 บาท (7.4x ของค่า 2022E EV/EBITDA) IVL ยังเป็น หุ้นเด่นของเราในกลุ่มปิโตรเคมีของไทยจากแนวโน้มการเติบโตของกำไรสุทธิที่มีความชัดเจน และอยู่ในระดับสูงจากการเติบโตทั้งจากภายใน (ปริมาณและอัตรากำไรที่สูงขึ้น) และจากการ ควบรวมและซื้อกิจการ

บทวิเคราะห์ฉบับนี้แปลมาจากบทวิเคราะห์ของ FSSIA ฉบับวันที่ 9 ธันวาคม 2021

Investment thesis

We believe IVL is now at an inflection point for its third growth phase, transforming from a high value-added (HVA)-driven, polyethylene terephthalate (PET)/purified terephthalic acid (PTA)-focused product company into a packaging, olefin-integrated company in 2019-23.

Unlike its last two growth cycles when IVL funded its capacity growth through debt and capital increases using warrants (IVL-W1 and IVL-W2), key growth strategies in IVL's third growth cycle could be driven by 1) M&A in the global packaging business, non-PET packaging in frontier markets and specialty chemicals for polyester chain products; and 2) backward integration into the olefins business, including an ethane cracker, propylene production, and downstream polyethylene (PE) and polypropylene (PP), as these are key feedstock materials for IVL's growing packaging segment. The integration focus should only be on self-sufficient, non-merchant applications.

Company profile

Indorama Ventures (IVL) was incorporated in 2003 to start up a petrochemical business in Thailand. Initially focusing on wool fibre, the company expanded into the polyester chain, including polyester fibre, PET, and PTA.

www.indoramaventures.com

Catalysts

Potential catalysts for IVL include 1) higher PET and PTA margins; 2) a 10% y-y rising sales volume due to multiple acquired assets in 2018; and 3) an EBITDA margin recovery for HVA products, given the re-pricing of HVA products to reflect higher feedstock costs.

Risks to our call

The key downside risks to our EV/EBITDA-based TP are weaker-than-expected margins for PX-PTA and PET-PTA, lower demand for polyester, and delays in IVL's projects.

Earnings sensitivity

- For every 1% change in the THB/USD exchange rate, we estimate a 1.4% change in 2021 EPS, all else being equal.
- For every 1% increase in latex price, we estimate 2021 EPS would fall 0.7%, and vice versa, all else being equal.
- For every 1% increase in utilisation rate, we estimate 2021 EPS would rise 1.5%, and vice versa, all else being equal.
- For every 1% increase in ASP, we estimate 2021 EPS would rise by 0.8%, and vice versa, all else being equal.

Indorama Ventures IVL TB

Greener growth in IOD and cPET

We have come away from our conference call with three of IVL's key executives – Mr. Dillip Kumar Agarwa, CEO, Mr. Alastair Port, President and COO of the IOD group, and Mr. Muthukumar Paramasivam, COO of the integrated PET group, Americas – with three major points that confirm our positive view on the company's net profit growth outlook in 2022-23.

First, IVL's IOD EBITDA could grow markedly to USD0.7b in 2022, driven by the acquired Oxiteno, higher margins, and rising volumes. Second, the cPET group should generate strong EBITDA of over USD1.3b in 2022, driven by the sustainably high margins of integrated PET-PTA in the Americas and Europe. Third, IVL is on track to realise the benefits of its rPET business in the wake of the higher pricing power and rising demand for rPET products after the COP26 meeting.

Exhibit 1: Core net profit before tax, net profit, and core net profit growth

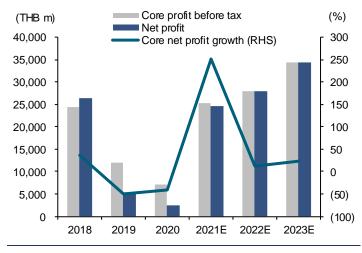

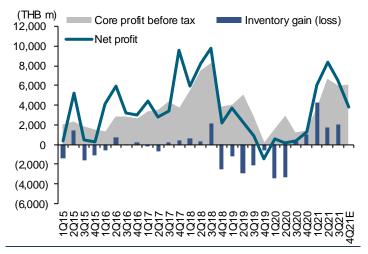

Exhibit 2: Quarterly core net profit before tax, inventory gain (loss), and net profit

Sources: IVL; FSSIA estimates

Sources: IVL; FSSIA estimates

In 2Q-3Q21, IVL saw strong earnings of over THB0.5b per quarter in both its core operating net profit and reported net profit (including inventory gains (losses)), thanks to rising sales volumes on higher utilisation rates, its lower-than-peers' cost structure as a result of IVL's continued effort to streamline in order to maintain its cost competitiveness, and the high industry margins of PET-PTA, particularly in the Western markets (North America and Europe), and downstream IOD products (surfactants, ethanolamine, propylene oxide (PO), propylene glycol (PG), and ethylene oxide (EO)).

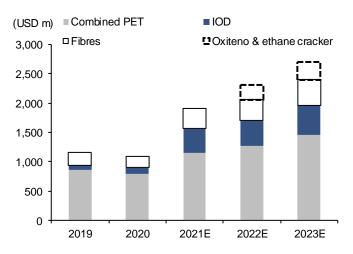

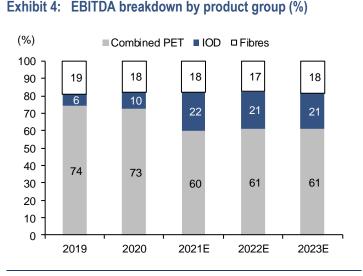

Exhibit 3: EBITDA breakdown by product group

Sources: IVL; FSSIA estimates

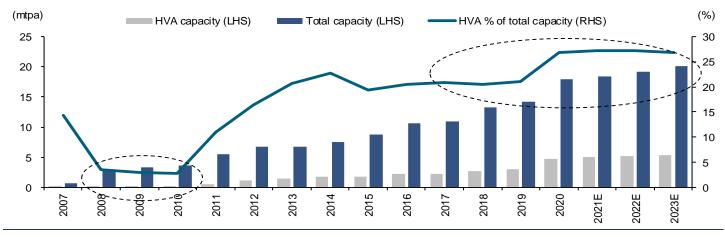

Sources: IVL; FSSIA estimates

After posting a strong 9M21 net profit of THB21b, we remain confident that IVL should see a series of strong net profits in 2021-23, rising from THB24.7b in 2021, to THB28b in 2022, and THB34.4b in 2023, growing by 256% y-y in 2021 up to 14% y-y in 2022, and 24% y-y in 2023. We project IVL's EBITDA to rise from USD1.1b in 2020 to USD1.9b in 2021, jumping to USD2.1b in 2022 and USD2.4b in 2023. However, if we include the EBITDA from the ethane cracker and Oxiteno, we expect IVL's EBITDA to jump to USD2.3b in 2022 and USD2.7b in 2023.

4Q21/2022/2023 net profits could beat our forecast and Bloomberg's consensus estimate by a large margin. We think one of the potential catalysts to drive up IVL's share price in the next six months would be if Bloomberg consensus upgrades its net profit forecasts on IVL in 2022-23 by 30-50%. We think IVL's strong EBITDA from the IOD and cPET groups could positively surprise the market's expectations.

Note that although our net profit forecasts of THB28b in 2022 and THB34.4b in 2023 are already 30% and 50% higher than Bloomberg's consensus estimates, respectively, we still believe that IVL could post strong net profits in 2022-23 that could beat both our forecasts and Bloomberg's consensus estimates. The key drivers for the potentially surprising upsides could come from strong EBITDA of over USD150m-200m from Oxiteno and USD100m EBIDTA from the ethane cracker, which already started its commercial operation date (COD) in Nov-21.

Exhibit 5: Total capacity, HVA capacity, and HVA capacity as % of total capacity

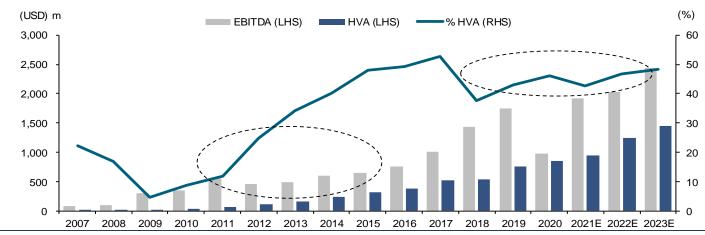

Sources: IVL; FSSIA estimates

HVA portfolio is strengthened further after the acquisition of IOD assets

(Huntsman and Oxiteno). IVL acquired 4.1mtpa of IOD assets from Huntsman in 2020. However, IVL has seen its EBITDA from HVA products (defined as highly sustainable and lucrative products with an EBITDA margin of over 10% vs IVL's 2021E average of 17%) decline from the 54% of total EBITDA peak in 2017 down to 43% in 2021, based on our estimate.

Exhibit 6: EBITDA, HVA EBITDA, and HVA EBITDA as % of total EBITDA

Sources: IVL; FSSIA estimates

The main reason for the downtrend in HVA EBITDA as a percent of total EBITDA is due to the increase in non-HVA, commodity product capacity, mainly for PET, resulting in the HVA capacity as a percent of total capacity dropping from 25% in 2014 down to 21% during 2015-2019.

However, after the acquisition of the 4.1mtpa IOD assets from Huntsman in 2020, IVL has seen its HVA portfolio rise from 21% of total capacity in 2019 to 25% in 2020, which has been maintained in 2021. With the acquisition of around 1mtpa of IOD capacity from Oxiteno by 1Q22, we estimate that IVL's HVA capacity as a percent of total capacity will rise to 27% in 2022 onward.

IOD emerges as IVL's next growth driver. After having successfully transitioned its production portfolio from commodity-driven to HVA-driven during its two growth cycles (2000-18), we estimate that IVL is now in the next growth phase to increase its EBITDA by 2.3x during 2019-23 to USD2.7b in 2023. It should be backed by the EBITDA from its IOD group that we project at USD0.6b-1.0b, and the remaining EBITDA growth should come from IVL's capacity expansion into new markets and the capacity growth of its rPET globally, which we project to reach 750ktpa by 2025.

Exhibit 7: IVL's and Oxiteno's IOD product portfolios

| IVL's capacity post acquisition of Huntsman's assets | Huntsman | Ethane cracker | Texas plant | Oxiteno | Total |
|--|----------|----------------|-------------|---------|--------|
| | (ktpa) | (ktpa) | (ktpa) | (ktpa) | (ktpa) |

| Others | 188 | | | 1 | 188 |
| Total | 3,147 | 440 | 550 | 440 | 4,577 |

Source: IVL

HVA vs commodity product portfolio. Of IVL's total capacity of 18mtpa, HVA

currently accounts for 25% of total capacity, including 1) most of the fibre capacity of 2mtpa; 2) one-third of PET capacity; 3) dimethyl 2,6-naphthalene dicarboxylate (NDC) and purified isophthalic acid (PIA; 0.44mtpa capacity); and 4) all downstream IOD products (surfactants, ethanolamine, PO, PG, purified EO/linear alkyl benzene (LAB)).

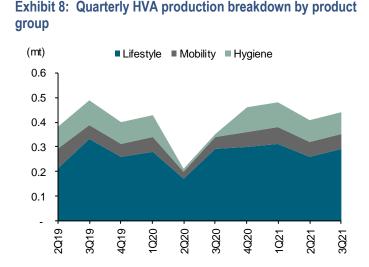

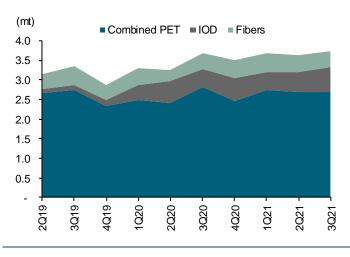

Exhibit 9: Quarterly production breakdown by product group

Source: IVL

Source: IVL

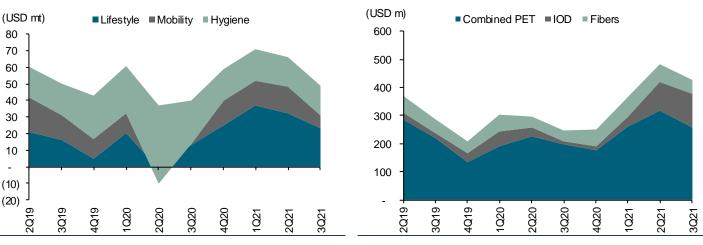

We estimate that IVL has a total HVA capacity of 4.5mtpa, around 25% of its total capacity of 18mtpa. According to IVL, its HVA is classified into three segments:

HVA #1: Lifestyle HVA for the polyester fibres for clothes, furniture, and personal wares. This lifestyle product has seen demand weaken in the past two years during the pandemic as a result of the global lockdowns that hindered the sales of clothes in stores.

HVA #2: Mobility HVA for the products used in the automotive industry. Demand was also impacted by the global lockdowns due to the supply disruptions that led to the chip and auto part shortages worldwide, as well as the temporary shutdowns of plants.

HVA #3: Hygiene HVA is the largest and most resilient HVA product segment in IVL's HVA portfolio, given its lower demand elasticity to the lockdowns. Hygiene HVA products include fibres for pampers, sanitary, and personal care cleaning products.

Exhibit 10: Quarterly HVA EBITDA breakdown by segment

Source: IVL

Source: IVL

HVA vs commodity EBITDA margin. Among three HVA product segments, the EBITDA per tonne for the hygiene segment is the not only the highest but also the most sustainable, thanks to its lower demand elasticity than those of the mobility and lifestyle segments, whose EBITDA per tonne and sales volumes have been highly volatile during the pandemic in 2020-3Q21.

Exhibit 12: HVA EBITDA per tonne by segment

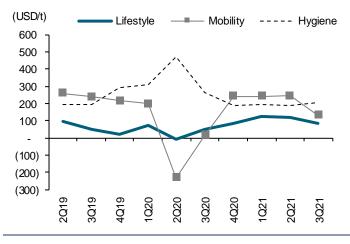

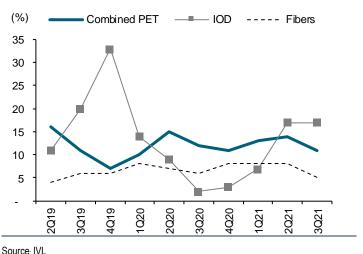

Exhibit 13: EBITDA margin by product group (includes stock gain (loss)

Exhibit 11: Quarterly EBITDA breakdown by product group

Source: IVL

However, compared to IVL's other non-HVA products – mostly in the cPET group (paraxylene (PX), PTA, PET), upstream IOD products (ethylene, propylene), intermediate IOD products (MTBE, MEG) – HVA EBITDA margins are more sustainable than those of the commodity products as there is less competition from China and a more consolidated market structure.

In 2020, IVL witnessed a significant drop in the IOD utilisation rate due to planned and unplanned shutdowns, the polar vortex, and hurricane impacts, which led to the weak EBITDA margin in 2020. However, since 2Q21, the IOD utilisation rates and EBITDA margins have since recovered steadily and have now returned to normality at a 25% core EBITDA margin in 3Q21.

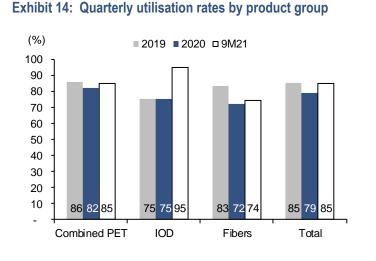

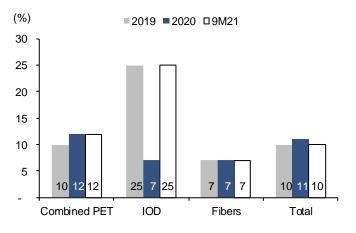

Exhibit 15: Core EBITDA margin by product group

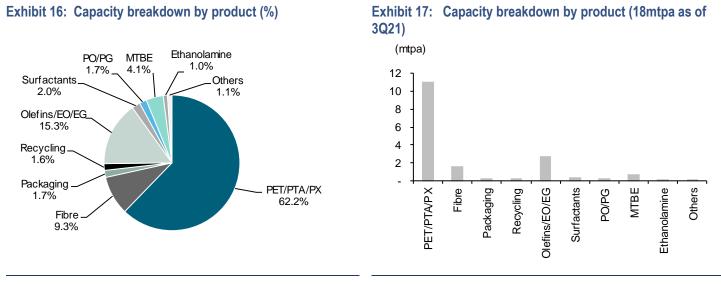

Source: IVL

Source: IVL

IOD is emerging as IVL's crown jewel

With the soon-to-be-completed acquisition of Oxiteno's IOD assets in Brazil and the recent COD commencement of its ethane cracker after over a year's delay, we project IVL's EBITDA from the IOD group to grow by 2x y-y from USD0.3b in 2021 to USD0.7b in 2022, accounting for 25-30% of IVL's total 2022E EBITDA of over USD2.8b-3.0b.

Sources: IVL; FSSIA estimates

Sources: IVL; FSSIA estimates

Currently, IVL has a total IOD group capacity of 4.5mtpa, representing 25% of its total 18mtpa capacity as of 3Q21. Most of the IOD group's capacity comes from 4.1mtpa of IOD capacity acquired from Huntsman in 2020. In the next two quarters, IVL is set to increase its IOD capacity from 4.5mtpa in 3Q21 to 5mtpa in 4Q21 and 6mtpa by 1Q22, adding 0.44mtpa from its ethane cracker in Nov-21 after its successful COD in Nov-21 and 1mtpa of Oxiteno's IOD diversified product portfolio in 1Q22.

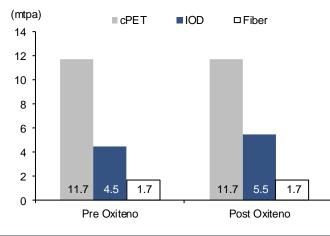

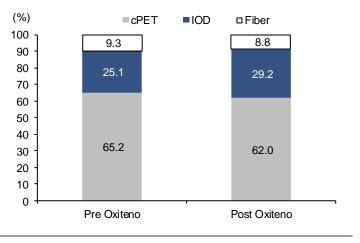

Exhibit 19: Estimated IOD group capacity breakdown preand post-Oxiteno acquisition in 1Q22 (%)

Sources: IVL; FSSIA estimates

Sources: IVL; FSSIA estimates

With the acquisition of 1mtpa of Oxiteno's IOD product portfolio and the start-up of its 0.44mtpa ethane cracker, we expect IVL's upstream and downstream IOD product portfolio to be further strengthened.

Upstream-wise, the additional 0.44mpta production of ethylene and propylene from the ethane cracker should reduce IVL's dependence on the outside supply of olefins for its IOD product group and allow it to capture the high gas-based ethylene margin in the US market.

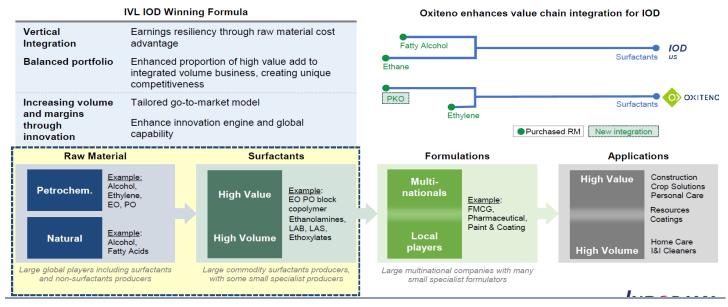

IVL/Oxiteno Production Raw Material **End Markets** Upstream & Intermediates Downstream Propylene Propylene Oxide Ethylene Oxide Ethane Ethylene Surfactants & EO Synthetic Alcohols Derivatives Natural Fatty Acids/ Natural Alcoh<u>ols</u> Palm Kernel Oil LAO/Paraffin I AB Virtual integration¹ Butane MTBE Ethylene Glycols Integrated **PET/Fibers** MX РX PTA Methanol ackaging Purchased RM IVL Oxiteno

Exhibit 20: IVL's product portfolio value chain: IOD with Oxiteno, cPET and Fibres

Source: IVL

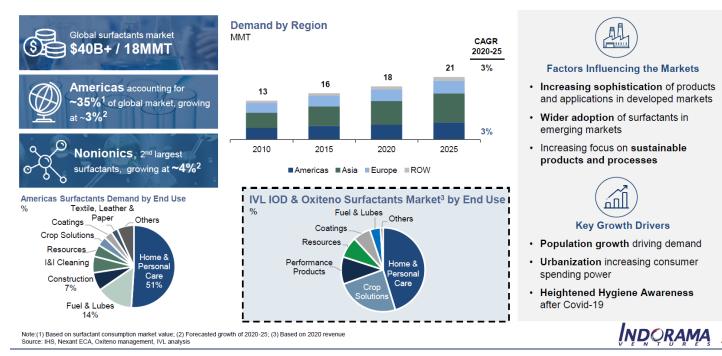

Downstream-wise, the acquisition of Oxiteno will add not only the upstream olefins of intermediate EO/EG and PO/PG and the downstream surfactant ethanolamine, but also the green, oleo chemical products of fatty alcohol, all being products to serve the high-growth markets in the pharmaceutical, paint & coating, and fast-moving consumer goods (FMCG) or consumer packaged goods segments.

Exhibit 21: A more integrated IOD portfolio will allow IVL to serve the higher demand in the high-margin surfactants market

Source: IVL

Exhibit 22: Surfactants are one of the most lucrative downstream IOD products in IVL's portfolio

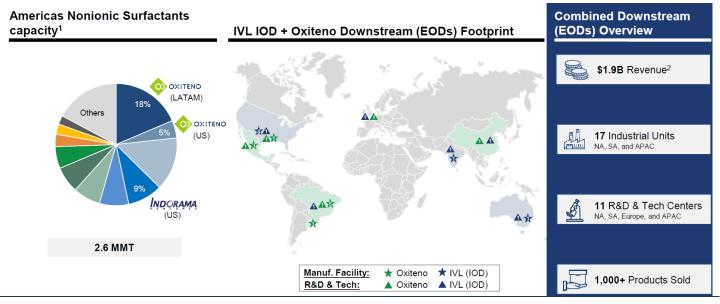

Source: IVL

With a combined 2.6mtpa capacity of surfactants in IOD assets (IVL+Oxiteno) should allow IVL to capture not only the projected demand growth of over USD40b in the global surfactants market, but also from the US market (35% of global surfactants market in 2020), according to IVL.

We estimate that IVL's surfactants alone could generate up to USD0.2b-0.3b in annual EBITDA in 2022 onward following the acquisition of Oxiteno's assets and the start-up of its ethane cracker.

Exhibit 23: Non-ionic surfactants capacity in the Americas and IVL's plant locations

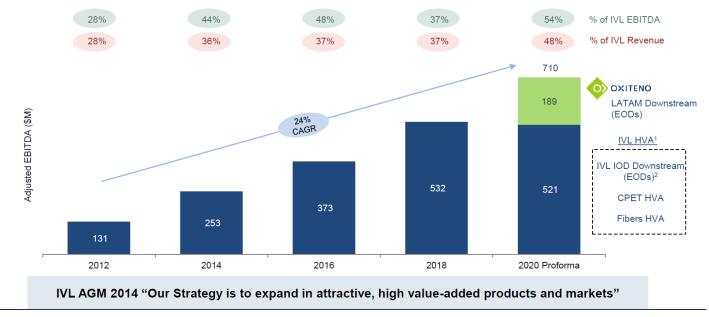

Source: IVL

Surfactants and IOD in IVL's HVA portfolio. With the capacity growth of over 5mtpa from its two IOD asset acquisitions (Huntsman in 2020 and Oxiteno in 2022), we expect IVL's HVA portfolio to significantly grow from 21% to 27% in 2022 onward.

According to IVL, HVA would have contributed 54% of EBITDA (USD1b in 2020) and 48% of revenue (USD10b in 2020) if Oxiteno's IOD asset was added in 2020. In 2022, when Oxiteno's asset is set to be fully added in 1Q22, we estimate that HVA will account for over 60% of total EBITDA and 50% of revenue.

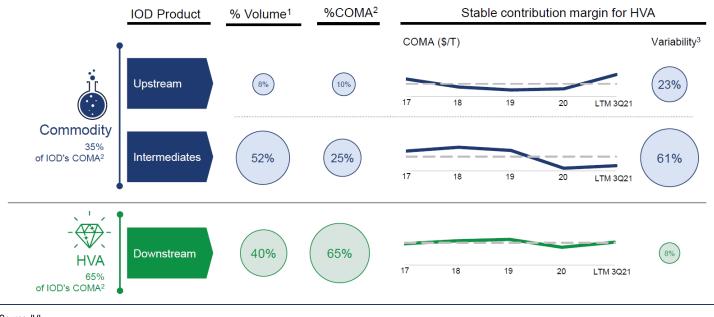

Source: IVL

Margin volatility of IOD products. Within the three IOD segments, downstream IOD products have the most sustainable contribution margin (COMA), followed by upstream IOD products. Intermediate IOD products (MTBE, MEG) are the most volatile COMA product group, given its more fragmented market structure.

Exhibit 25: IVL's strong HVA product portfolio

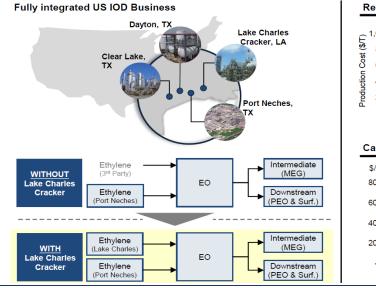

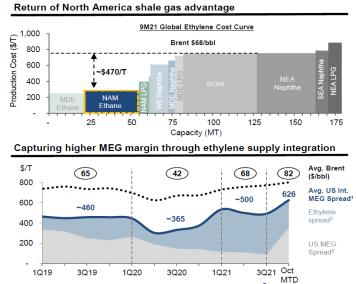

Source: IVL

Upstream IOD product margin outlook in 2022. With a fully integrated IOD production value chain in the US Gulf of Mexico, we believe the start-up of IVL's ethane cracker in Nov-21 will 1) add USD100m in annual EBITDA to IVL; 2) reduce the ethylene supply risk; and 3) enhance the EBITDA margin of the downstream IOD products by using the ethylene produced at the ethane cracker plant in Lake Charles, Louisiana, USA.

As the global oil price has remained high at above USD70/bbl, we think IVL's shale gas-based ethane cracker will result in a much higher margin of MEG-ethylene, which we estimate to have up to a USD470/t cost advantage over the naphtha-based ethylene producers in Asia.

Exhibit 26: The start-up of IVL's ethane cracker should timely capture the high ethylene margin in the US market

Source: IVL

Margin outlook for the intermediate IOD products MTBE and MEG in 2022.

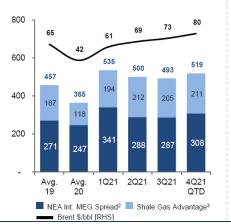

Meanwhile, the most vulnerable IOD products in IVL's portfolio are the intermediate products of MTBE and MEG. MTBE, a key gasoline blending agent to improve the octane of the gasoline sold at oil stations, has seen its margin over butane and methanol, the two key feedstocks, sharply decline in 2020-21 as a result of the LPG price hikes, given that butane is a key component of LPG.

Exhibit 27: Margins of the intermediate IOD products MTBE and MEG in the US market

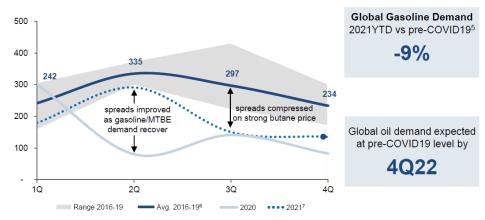

US Int. MEG spreads remain strong US Int. MEG spreads benefit from ASP price increase, as crude oil price rises, returning shale gas advantage to US producers

US Int. MEG spreads¹ (\$/T) vs. Brent (\$/bbl)

USGC MTBE spreads compressed in 3Q21 and maintain in 4Q21 QTD USGC MTBE spreads compression, largely a result of unseasonal strong butane price, which more than offset improved MTBE price. Average global gasoline demand for 2021YTD was at ~9% below pre-COVID19 level; upside on MTBE price as oil demand expected to recover by 4Q22

USGC MTBE Spreads⁴ (\$/T)

Source: IVL

We think the MTBE-butane margin will remain weak in 2022 below the USD200/t level, but should average above USD100/t, close to the breakeven level of USD130/t, based on our estimate. Hence, we project that MTBE will continue to generate negative EBITDA for IVL in the range of USD50m-150m in 2022.

Exhibit 28: US MEG industry integrated spread

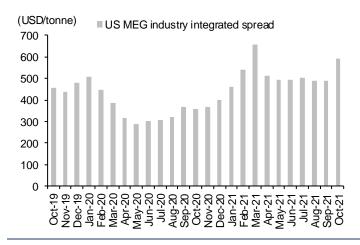

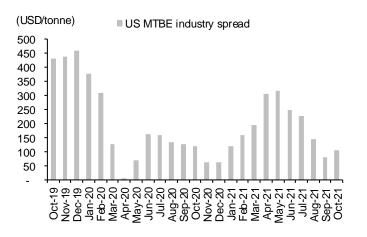

Exhibit 29: US MTBE industry spread

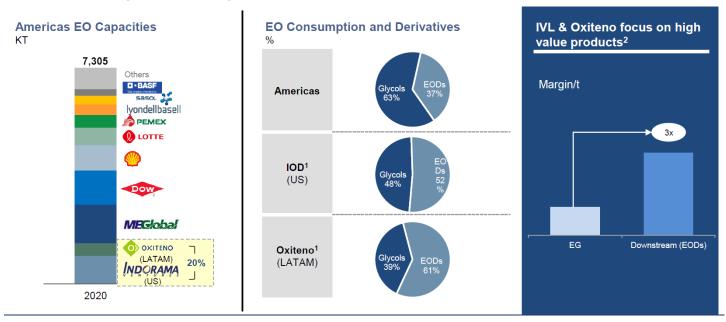

Source: IVL

Source: IVL

MEG margin should remain healthy in 2022. Unlike MTBE, we think the margin of MEG-ethylene will remain strong in 2022, driven by the high demand for MEG as a key intermediate feedstock to produce ethylene oxide derivatives (EOD). EOD command a 3x higher EBITDA margin than the normal ethylene glycol (EG) used in the production of polyester fibres and PET plastics.

Given the strong demand for MEG for EOD in the US, we believe IVL should continue to enjoy a high margin of MEG at over USD450/t, the 3-year average level. The MEG margin spiked to over USD600/t in Oct-21, driven by the high demand and tight supply caused by import disruptions.

Exhibit 30: MEG margin remains strong for EOD

Source: IVL

Combined PET remains IVL's sacred cash cow

cPET is IVL's largest product group with a total capacity of 12mtpa (67% of total capacity in 3Q21), including packaging, PX, PTA, PET, and special chemicals.

What makes IVL's PET-PTA margin sustainably higher than those of other packaging materials and IVL's competitors? Thanks to its superior characteristics, quality, and recyclability, the integrated PET-PTA margin has continued to strengthen, particularly in Western markets. Four advantages for PET and PTA – superior recyclability, favourable market structure, import barriers, and high contract prices and margins – have contributed to the highly sustainable and strong integrated PET-PTA margin in Western markets, commanding a USD500/t premium over the integrated PET-PTA margin in Asia (USD820/t vs USD300/t in Oct-21).

Exhibit 31: Asia industry PET and PTA spread

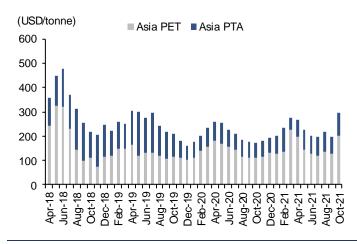

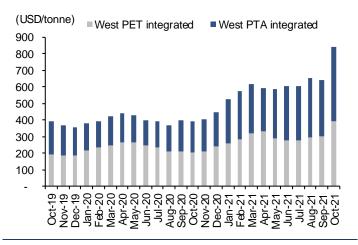

Exhibit 32: West industry PET and PTA spread

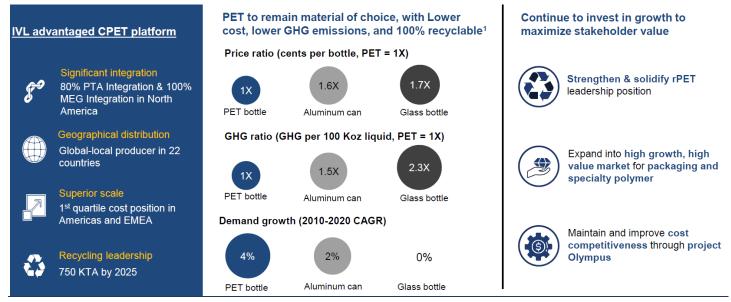

Source: IVL

Source: IVL

Advantage #1: Superior recyclability and quality. Unlike other plastics and packaging materials such as aluminium, paper, and glass, PET has some unique advantages over its substitutable materials, including 1) its lowest price per bottle compared to aluminium and glass bottles; 2) its lowest greenhouse gas emission ratio; 3) its highest recyclability of up to 100%; and 4) its lightest weight for cost savings. According to IVL, the demand growth for PET is projected to grow at a 4-5% CAGR from 2021-30, slightly higher than the 4% CAGR in 2010-20.

Exhibit 33: PET is one of the most environmentally friendly plastics and packaging materials due to its light weight, low carbon emissions, and high level of recyclability

Source: IVL

IVL's ESG policy. As a major global producer of PET plastics and polyester fibres, IVL has a clear vision and goal to raise its footprint in green plastic products by expanding its PET recycling capacity. With its recent 100% acquisition of CarbonLite Holdings LLC (CHL), located in Dallas, Texas in the US in May-21, we project that IVL is now on track to achieve its 750ktpa recycling capacity target by 2024.

As of 3Q21, IVL's total recycling capacity stands at 319ktpa, covering three continents (2% of total capacity), comprising 1) 134ktpa in the EU (62ktpa in France, 50ktpa in the Netherlands, 22ktpa in Poland); 2) 104ktpa in the US (44ktpa in Texas, 30ktpa in New Orleans, and 30ktpa in California); 3) 42ktpa in Mexico; 4) 30ktpa in Thailand; and 5) 9ktpa in Brazil.

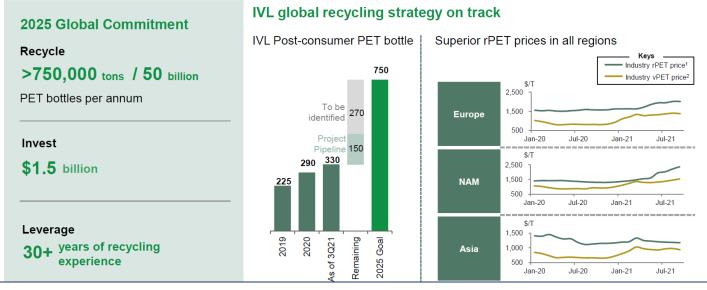

Exhibit 34: IVL's global recycling plant locations

Source: IVL

Greener and recycling plastics are the global megatrend. On 15 Nov-21, during the summit meeting of the UN Climate Change Conference (COP26), aimed at reducing the worst impacts of climate change, a new global agreement – the Glasgow Climate Pact – was reached by 197 countries. The COP26 pact sets the global agenda on climate change for the next decade to limit global warming to within 1.5C, and one of the key actions is to enhance the level of plastics recyclability to reduce the production of virgin PET plastics, according to the Energy Information Administration.

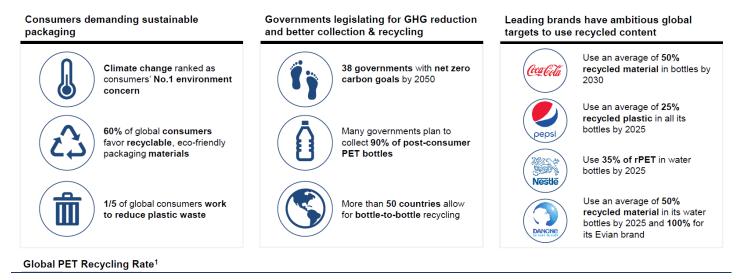

Exhibit 35: IVL's recycling target and plan

Source: IVL

Many of IVL's clients, mostly in the food & beverage and FMCG industries, have already mandated a number of requirements, including 1) at least 50% recycled material in bottles by 2030; and 2) 35% rPET in water bottles by 2025. Hence, we think IVL is ahead of the industry curve by not only complying with greener megatrends but also by benefitting from the rising premiums of recycled PET.

Exhibit 36: Recycling is now embedded in many global corporates' policies under the COP26 pact and ESG

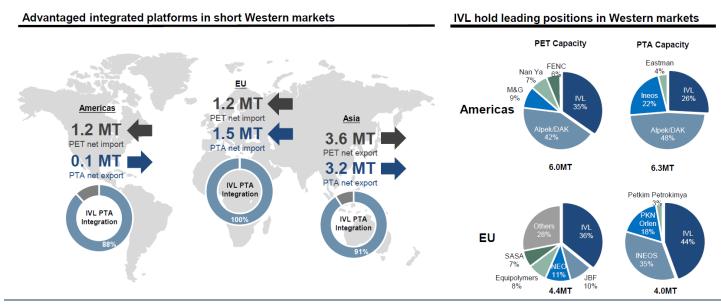

Source: IVL

Advantage #2: More favourable market structure. Unlike the PET market in Asia with a number of suppliers in China, India, and other North and Southeast Asian countries, the number of PET producers in North America and Europe is much more limited and concentrated, with only three major producers (IVL, Alpek, and M&G for a combined market share of 86%) in the Americas (North and South American continents) and five major players in the EU (five players for a combined 72% market share).

For the PTA upstream market, there is a similar picture, with only three major producers in the Americas (IVL, Alpek, and Inoes for 96%) and Europe (IVL, Ineos, and PKN Orlen for 97%). This is probably the most compelling reason why the margins of PET-PTA and PTA-PX in the Americas and Europe are much higher than the margins in Asia, in our view.

Exhibit 37: Favourable market structures in North America and Europe resulting in higher PET margins

Source: IVL

Advantage #3: Import market structure. Both the Americas and Europe are net import markets for PET and PTA, with the Americas' net imports amounting to 1.2mtpa of PET and net exports totalling 0.1mtpa of PTA and Europe's net imports at 1.2mtpa of PET and 1.5mtpa of PTA as of 3Q21. As a result, import parity costs, including the freight cost for shipping and land transportation will add meaningful costs to the prices of PET and PTA in Western markets.

Advantage #4: Higher contract margin upside for PET and PTA in 2022. We believe IVL will have a margin upside for its combined PET, its largest product group, in 2022, as it is now negotiating with global customers for new contract prices for PET in Western markets. This is possible due to the currently tight supply and high freight costs for intercontinental shipping, which we think are unlikely to subside anytime soon until at least mid-2022, due to the container shortage and the chronic Covid-19 pandemic.

Management indicated that the margins of PET and PTA sold to clients under oneyear contracts – which we estimate at 5.2mtpa, accounting for 70% of the PET sales volume and part of the PTA sales volume in the Americas and Europe – will command 30% or a USD150-200/t higher margin y-y for the sales volumes to be delivered throughout 2022.

Within IVL's product portfolio, we estimate that around two-thirds of its EBITDA comes from fixed margin products: 1) the IOD group: pure EO (PEO), PO, ethanolamine, and surfactants (18% of 2021E contribution margin); 2) the fibre group: HVA products in polyester, nylon, polypropylene (PP), polyethylene (PE) and rayon; and 3) the combined PET group: PET and PTA with contract pricing (50% of sales volume) and specialty chemical products (PIA and NDC). We estimate that IVL's fixed products will generate EBITDA of USD0.8b-1.0b annually in 2021-23 thanks to their fixed margin natures.

Exhibit 38: IVL's product portfolio - breakdown by fixed and floating margins

| Margin structure | Product group | Product | Contribution margin |
|--------------------------------|---------------|--|---------------------|
| | | | (%) |
| Fixed margin products | IOD | PEO/PO/Ethanolamine/surfactants | 18 |
| Fixed margin products | Fibres | HVA for polyester, nylon, PP/PE, and rayon | 15 |
| Fixed margin products | Combined PET | Contract cost-plus PET and PTA in North America and Europe | 30 |
| Total fixed margin products | | | 63 |
| Gas-based products | IOD | MTBE/MEG | 12 |
| Commodity products | Fibres | Lifestyle attire and clothes | 5 |
| Spot margin products | Combined PET | Spot price PET and PTA in Asia | 20 |
| Total volatile margin products | ; | | 37 |

IVL's growth cycle history revisited: This time IOD is a growth hero

IVL's first growth cycle (2000-11) started with the acquisition of PET and PTA capacity in the 2000s to timely capture the PTA margin upcycle in 2010-11.

In the second growth cycle (2012-18), IVL shifted its strategic growth direction to acquire mostly HVA products, primarily for polyester fibres, in Europe and North America, to strengthen its earnings growth and sustainability. In 2017-18, when the margin upcycle for integrated PET-PTA and polyester fibres arrived, IVL had again successfully captured the strong margin of integrated PET-PTA, particularly in the Western markets where IVL has a much larger capacity via acquisitions and greenfield growth projects.

Exhibit 39: IVL's historical growth cycles

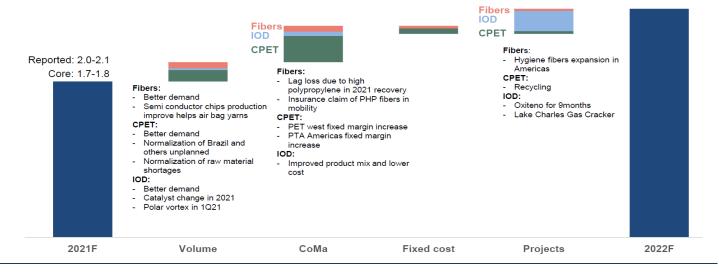

| | Unit | 1st growth cycle | 2nd growth cycle | 3rd growth cycle |
|---|-------|------------------|---------------------|--|
| Period (bottom to peak margin) | year | 2000-11 | 2012-18 | 2019-23E |
| Capacity growth | % | 20 | 25 | 22 |
| % EBITDA | % | 26 | 26 | 23 |
| Key drivers | | Tuntex | AlphaPET, HVA | Huntsman, Oxiteno, ethane cracker |
| Product added | | PTA, PET | PET, HVA, polyester | Olefins and derivatives (IOD), recycling |
| PET-PTA integrated margin | USD/t | 188-194 | 188-194 | 250 |
| Estimated EBITDA contribution from new capacity | USD b | 0.4 | 0.7 | 1.0 |
| Peak EBITDA | USD b | 0.6 | 1.4 | 2.7 |

Source: IVL

In the third growth cycle (which we estimate to last from 2019-23), we project that IVL's EBITDA will grow from USD1.2b in 2019-20 to USD2.8-3.0b in 2023, driven mostly by the capacity growth from the IOD group from the two key acquisitions of Huntsman (4.1mtpa) and Oxiteno (c1mtpa).

We, however, believe that our EBITDA forecasts for 2022-23 still have potential upsides based on the stronger-than-expected margins of IOD products and PET in Western markets. IVL's recently guided EBITDA for 2022 is in the range of USD2.9-3.0b, which is on par with our USD2.8-3.0b estimate.

Disclaimer:

The disclosure of the survey results of the Thai Institute of Directors Association ('IOD") regarding corporate governance is made pursuant to the policy of the Office of the Securities and Exchange Commission. The survey of the IOD is based on the information of a company listed on the Stock Exchange of Thailand and the Market for Alternative Investment disclosed to the public and able to be accessed by a general public investor. The result, therefore, is from the perspective of a third party. It is not an evaluation of operation and is not based on inside information.

The survey result is as of the date appearing in the Corporate Governance Report of Thai Listed Companies. As a result, the survey results may be changed after that date.

FSS International Investment Advisory Company Limited does not confirm nor certify the accuracy of such survey results. * CGR scoring should be considered with news regarding wrong doing of the company or director or executive of the company such unfair practice on securities trading, fraud, and corruption SEC imposed a civil sanction against insider trading of director and executive; ** delisted

Declared This level indicates determination to participate in the Thailand's Private Sector Collective Action Coalition Against Corruption programme (Thai CAC)

Disclaimer:

The disclosure of the Anti-Corruption Progress Indicators of a listed company on the Stock Exchange of Thailand, which is assessed by Thaipat Institute, is made in order to comply with the policy and sustainable development plan for the listed companies of the Office of the Securities and Exchange Commission. Thaipat Institute made this assessment based on the information received from the listed company, as stipulated in the form for the assessment of Anti-corruption which refers to the Annual Registration Statement (Form 56-1), Annual Report (Form 56-2), or other relevant documents or reports of such listed company. The assessment result is therefore made from the perspective of Thaipat Institute that is a third party. It is not an assessment of operation and is not based on any inside information. Since this assessment is only the assessment result as of the date appearing in the assessment result, it may be changed after that date or when there is any change to the relevant information. Nevertheless, FSS International Investment Advisory Company Limited does not confirm, verify, or certify the accuracy and completeness of the assessment results.

Note: Companies participating in Thailand's Private Sector Collective Action Coalition Against Corruption programme (Thai CAC) under Thai Institute of Directors (as of June 24, 2019) are categorised into: 1) companies that have declared their intention to join CAC, and; 2) companies certified by CAC.

Additional Disclosures

Target price history, stock price charts, valuation and risk details, and equity rating histories applicable to each company rated in this report is available in our most recently published reports. You can contact the analyst named on the front of this note or your representative at Finansia Syrus Securities Public Company Limited

FSSIA may incorporate the recommendations and target prices of companies currently covered by FSS Research into equity research reports, denoted by an 'FSS' before the recommendation. FSS Research is part of Finansia Syrus Securities Public Company Limited, which is the parent company of FSSIA.

All share prices are as at market close on 08-Dec-2021 unless otherwise stated.

RECOMMENDATION STRUCTURE

Stock ratings

Stock ratings are based on absolute upside or downside, which we define as (target price* - current price) / current price.

BUY (B). The upside is 10% or more.

HOLD (H). The upside or downside is less than 10%.

REDUCE (R). The downside is 10% or more.

Unless otherwise specified, these recommendations are set with a 12-month horizon. Thus, it is possible that future price volatility may cause a temporary mismatch between upside/downside for a stock based on market price and the formal recommendation.

* In most cases, the target price will equal the analyst's assessment of the current fair value of the stock. However, if the analyst doesn't think the market will reassess the stock over the specified time horizon due to a lack of events or catalysts, then the target price may differ from fair value. In most cases, therefore, our recommendation is an assessment of the mismatch between current market price and our assessment of current fair value.

Industry Recommendations

Overweight. The analyst expects the fundamental conditions of the sector to be positive over the next 12 months. **Neutral.** The analyst expects the fundamental conditions of the sector to be maintained over the next 12 months. **Underweight.** The analyst expects the fundamental conditions of the sector to be negative over the next 12 months.

Country (Strategy) Recommendations

Overweight (O). Over the next 12 months, the analyst expects the market to score positively on two or more of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.

Neutral (N). Over the next 12 months, the analyst expects the market to score positively on one of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.

Underweight (U). Over the next 12 months, the analyst does not expect the market to score positively on any of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.
