UNCHANGED

Hitting an IOD home run

- We believe IVL's NP and EBITDA could hit record highs in 2022-23, backed by IOD EBITDA growth to USD0.6b in 2022-23.
- Acquisition of a producer of PET preforms, packaging, bottles and closures in Vietnam should strengthen its packaging segment.
- Maintain BUY and raise our TP from THB62 to THB70.

Solid 4Q21-2022 net profit outlook may surprise the market

Our site visit at IVL's integrated oxides and derivatives (IOD) plant reinforced our view that IVL's net profit and EBITDA could hit record highs in 2022-23, driven by: 1) the Oxiteno acquisition in Feb-22; 2) a 30% y-y PET-PTA margin expansion on the contract price increases for IVL's 5mt PET and PTA sales volumes in North America and Europe; and 3) 15-20% y-y higher sales volumes. In 4Q21, we expect IVL to post a strong quarterly net profit of THB8.1b, slightly lower than its 2Q21 net profit peak of THB8.3b, thanks to strong product margins and higher utilisation rates across all product segments.

Site visit in the US suggests a strong IOD EBITDA outlook

After our site visit at IVL's integrated IOD plant complex in Port Neches, Texas, we gained higher confidence for our higher-than-consensus net profit forecasts for 2021-23. We see three key potential catalysts for IOD EBITDA growth from USD0.3b in 2021 to USD0.6b in 2022-23: 1) a 90-95% average utilisation rate in 2022; 2) a USD50m EBITDA gain by 2024 from the Olympus project; and 3) the acquisition of Oxiteno could boost the margins of surfactants, ethanolamine, and polyurethane.

Strengthening its packaging business in Vietnam

On 10 Jan-22, IVL announced the USD118m acquisition of a 100% stake in Ngoc Nghia, a producer of PET preforms, packaging, bottles, and closures in Vietnam, to be completed by 1Q22. We are positive on this acquisition given that IVL stands to benefit by: 1) entering the high-growth Vietnam market with a projected 8% demand CAGR in 2022-25; 2) solidifying IVL's packaging segment with a total capacity of 0.3mtpa; 3) enhancing its EBITDA margin via packaging's 20% EBITDA margin vs IVL's overall EBITDA margin of 10-15%; and 4) the reasonable acquisition cost at 8-9x with the potential to generate an IRR of over 10%.

Upgrade target price to THB70 for top pick

We maintain BUY and raise our TP from THB62, previously based on 8.32x 2021E EV/EBITDA, to THB70, based on 9.1x 2022E EV/EBITDA, to reflect: 1) our 2021-23E EPS increases by 6.2-18.9% on our PET margin assumption upgrades and higher IOD EBITDA on higher margins from the acquisition of Oxiteno; and 2) our valuation rollover to 2022.

Share price performance	1 Month	3 Month	12 Month

Investment thesis

We believe IVL is now at an inflection point for its third growth phase, transforming from a high value-added (HVA)-driven, polyethylene terephthalate (PET)/purified terephthalic acid (PTA)-focused product company into a packaging, olefin-integrated company in 2019-23.

Unlike its last two growth cycles when IVL funded its capacity growth through debt and capital increases using warrants (IVL-W1 and IVL-W2), key growth strategies in IVL's third growth cycle could be driven by: 1) M&A in the global packaging business, non-PET packaging in frontier markets and specialty chemicals for polyester chain products; and 2) backward integration into the olefins business, including an ethane cracker, propylene production, and downstream polyethylene (PE) and polypropylene (PP), as these are key feedstock materials for IVL's growing packaging segment. The integration focus should only be on self-sufficient, non-merchant applications.

Company profile

Indorama Ventures (IVL) was incorporated in 2003 to start up a petrochemical business in Thailand. Initially focusing on wool fibre, the company expanded into the polyester chain, including polyester fibre, PET, and PTA.

Major shareholders

Source: Indorama Ventures

Catalysts

Potential catalysts for IVL include: 1) higher PET and PTA margins; 2) a 10% y-y rising sales volume due to multiple acquired assets in 2018; and 3) an EBITDA margin recovery for HVA products, given the re-pricing of HVA products to reflect higher feedstock costs.

Risks to our call

The key downside risks to our EV/EBITDA-based TP are weaker-than-expected margins for PX-PTA and PET-PTA, lower demand for polyester, and delays in IVL's projects.

Earnings sensitivity

- For every 1% change in the THB/USD exchange rate, we estimate a 1.4% change in 2021 EPS, all else being equal.
- For every 1% increase in latex price, we estimate 2021 EPS would fall 0.7%, and vice versa, all else being equal.
- For every 1% increase in utilisation rate, we estimate 2021 EPS would rise 1.5%, and vice versa, all else being equal.
- For every 1% increase in ASP, we estimate 2021 EPS would rise by 0.8%, and vice versa, all else being equal.

Source: FSSIA estimates

Our IOD site visit in the US confirms our positive view

We came back from our site visit at IVL’s IOD assets acquired from Huntsman in 4Q20 with a more confident view that IVL’s net profit and EBITDA could hit record highs in 2022 at THB32.1b and THB57.2b, respectively. We believe its IOD product group will not only see higher sales volumes as a result of a higher utilisation rate of over 90%, but also improving EBITDA margins y-y driven by higher demand and lower feedstock costs.

The key drivers include the stronger EBITDA from the IOD product group after the completed acquisition of Oxiteno in Feb-22, the margin expansion by up to 30% y-y that could generate a y-y higher USD450m EBITDA from the price increase for IVL’s 5mt PET and PTA sales volumes in Western markets (North America and Europe), and 15-20% y-y higher sales volumes due to higher demand for polyester fibre and PET bottles in 2022 with the expected post-pandemic global economic recovery.

Exhibit 1: Core net profit before tax, net profit, and core net profit growth

Sources: IVL; FSSIA estimates

Exhibit 2: Quarterly core net profit before tax, inventory gain (loss), and net profit

Sources: IVL; FSSIA estimates

We now expect IVL to post net profits of THB29.1b in 2021, THB32.1b in 2022, and THB36.4b in 2023, which could significantly beat Bloomberg consensus estimates by a large margin. For 2023, we now project IVL to continue to see stronger net profit growth momentum given the favourable demand-supply outlook for PET and IOD products as we expect global demand growth to rise meaningfully post Covid-19.

In 4Q21, we expect IVL to post a strong quarterly net profit of THB8.1b, slightly lower than its 2Q21 net profit peak of THB8.3b, thanks to strong product margins and higher utilisation rates across all product segments.

In 1Q22, net profit growth should continue both q-q and y-y, leading to a series of strong net profit growth rates in the next five quarters (4Q21-4Q22), backed by the higher sales volume (+20-25% y-y) from higher utilisation rates, new capacity from M&As, and high product margins.

The IOD product group is now a key growth catalyst

During our site visit at IVL’s integrated IOD plant complex in Port Neches, Texas, on 3 Jan-22, we gained more confidence for our strong and higher-than-consensus net profit forecasts for 2021-23, supported by a sharp rise in IOD EBITDA from USD0.3b in 2021 to USD0.6b in 2022-23, based on our estimate.

Under IVL’s management umbrella, the IOD plant site at Port Neches (IPN), acquired from Huntsman in 2020, suffered from multiple external factors that led to the disappointing net profit in 1H21.

Exhibit 3: EBITDA breakdown by product group

Sources: IVL; FSSIA estimates

Exhibit 4: EBITDA breakdown by product group (%)

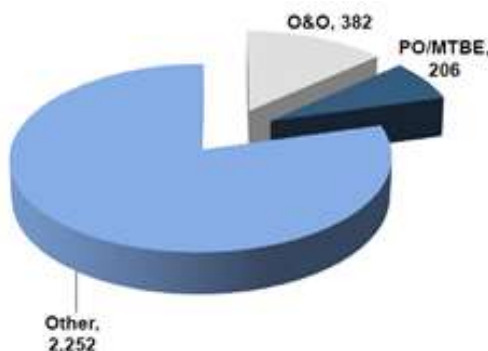

Sources: IVL; FSSIA estimates

We summarise the three key points that could drive the IOD product group’s EBITDA growth in 2022-23, based on management’s guidance.

First, management expects a 90-95% average utilisation rate for its IPN plants in 2022, up by over 10 ppts y-y, compared to 1H21 when they were affected by a freak winter storm. In addition, the planned major maintenance shutdown every five years for surfactants, ethanolamine, and MTBE at three key production units will not occur in 2022 but will instead be executed in 2024 (surfactants), 2023 (ethanolamine), and 2025 (MTBE and PO).

Second, management plans to achieve USD50m EBITDA by 2024 from synergies and cost savings under the “Olympus” operational improvement plan, up from USD22m in 2021. Third, post the complete acquisition of Oxiteno, IPN plans to gain higher synergies from the high-margin product portfolio of surfactants, ethanolamine, and polyurethane. With an additional 1,000 hectares of land available for development, IPN’s capacity could be expanded to double the current 4mtpa capacity to 8mtpa, based on management’s guidance.

Exhibit 5: IOD product group’s EBITDA breakdown

Source: IVL

Exhibit 6: Capacity breakdown at Port Neches, Texas, USA

Products	Capacity (mtpa)
Ethylene Oxide	1,300
Ethylene Glycol	964
Surfactants	580
Propylene Oxide	525
EOA (MEA, DEA, TEA)	400
Ethylene	480
Propylene Glycol	145
Propylene	40
DEG	73
MTBE	260 mg/yr

Source: IVL

However, starting in 3Q21, IVL has seen a significant improvement in the financial performance of IPN thanks to a sharp rise in the utilisation rate to 95% in 3Q21, up from 69% in 1Q21, due mainly to forced shutdowns caused by the polar vortex winter storm and the 78% utilisation rate in 2Q21 due to the impact of hurricanes.

In 3Q21, the IOD product group, which includes IPN and IVL’s ethylene oxide (EO) and ethylene glycol (EG) plants in Clear Lake, Texas, generated strong EBITDA of USD120m, up 21% q-q and 14x y-y, with an EBITDA margin of 17% vs IVL’s overall EBITDA margin of 11% in 3Q21.

Exhibit 7: IOD site aerial view

Source: IVL

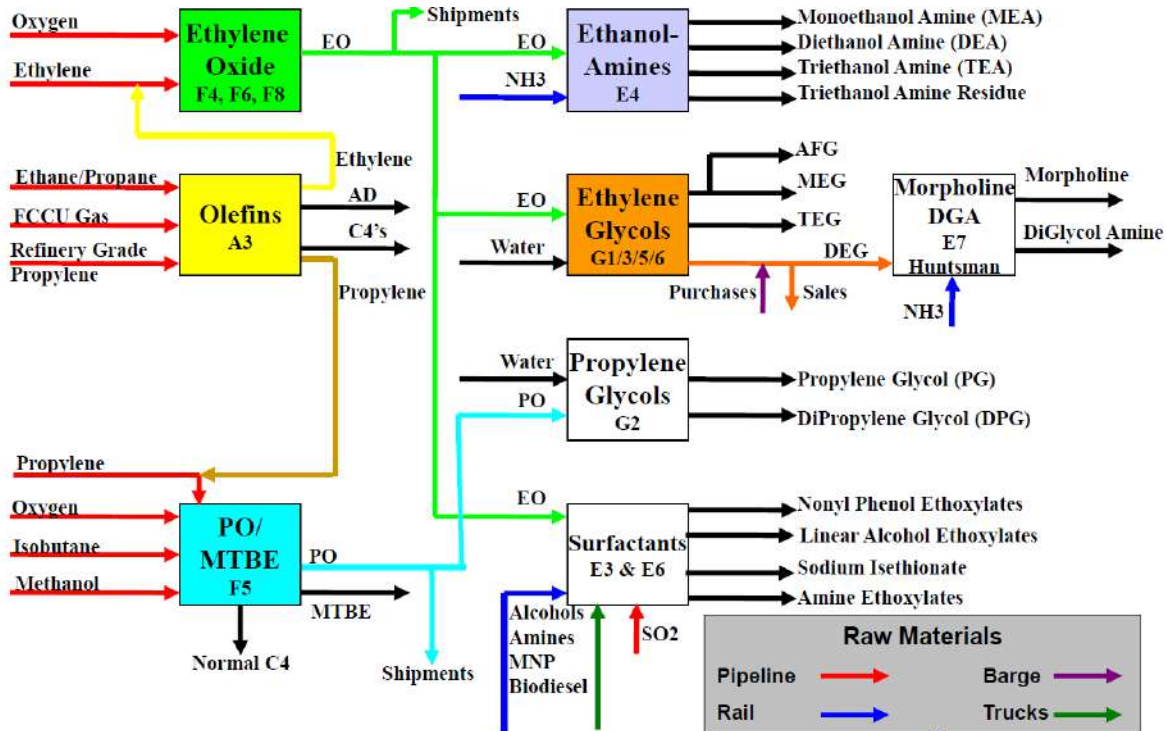

Exhibit 8: IOD site boundaries

Source: IVL

Port Neches IOD site – IVL’s crown jewel. We believe the IPN site, along with IVL’s EO/EG plants in Clear Lake, Texas, and the recently started up ethane cracker plant in Lake Charles, Louisiana, could emerge to become IVL’s new core EBITDA growth driver in 2022-23. We project that the IOD product group will generate USD450m-500m EBITDA in 2022-23. If we include the EBITDA from an additional 1mtpa from the acquisition of Oxiten’s IOD assets in Brazil, scheduled to be completed by IVL in Feb-22, we expect its EBITDA to rise to USD0.6b in 2022-23.

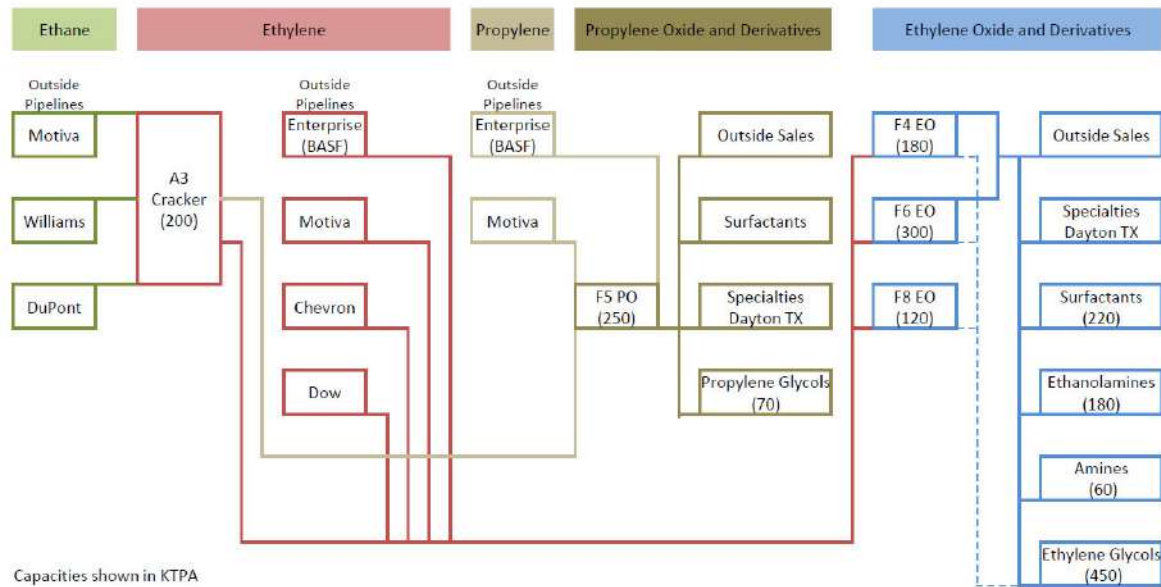

Exhibit 9: IOD site integration and production plan

Source: IVL

IPN is a highly integrated production plant complex. Within the site we visited, there are multiple production facilities that produce the upstream ethylene and propylene used as feedstock for EO/EG, propylene oxide (PO), and methyl tert-butyl ether (MTBE). The EO/EG is further processed into multiple downstream specialty products, including ethanolamine, EG derivatives, propylene glycol (PG), and surfactants, all of which are sustainable, lucrative products that we expect to generate an EBITDA margin of over 15%.

Exhibit 10: Major feedstock flows for IOD plants

Source: IVL

A brief history of the IPN site. Originally founded as Jefferson Chemical, a JV between Texaco and American Cyanamid in 1944, IPN’s plants entered production in 1947. In 1994, Huntsman acquired IPN from Texaco Chemical and later commenced operations at the EO unit in 2016. In 2020, IVL acquired IPN from Huntsman at an acquisition cost of USD2.1b. The site has a total of 600 employees and 450 contractor associates, according to management.

Exhibit 11: A bird’s-eye view of the IOD site

Source: IVL

Synergy and operational excellence. Similar to other assets worldwide acquired by IVL, after IVL's acquisition, IPN was reorganised in Feb-21 with a new director, Ms. Kimberley Hoyt, a highly experienced chemical engineer, who was joined by a number of other veteran management team members.

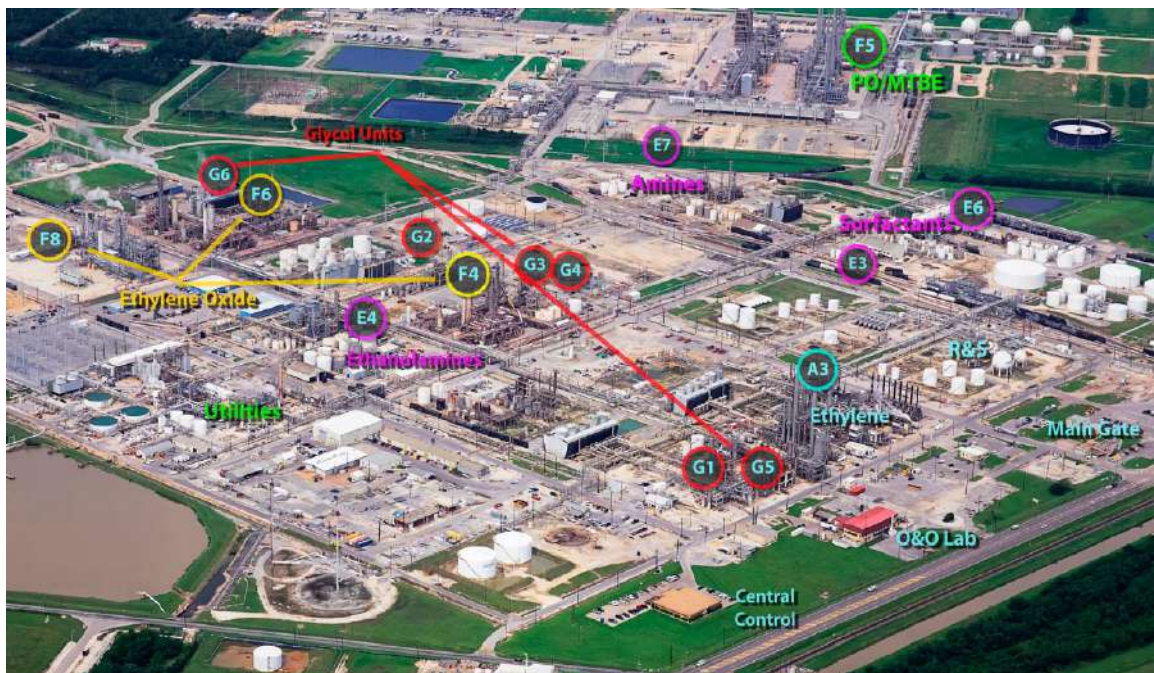

Exhibit 12: IOD site overview with each product plant's location

Source: IVL

The synergy potential under IVL's umbrella for IPN includes cost savings for centralised maintenance, engineering and human resources, and operational enhancements after the implementation of new information technology systems across IVL's global platform under the multi-year operational improvement program "Olympus". In addition, IPN's management expects to achieve even higher synergies via the integration of Oxiteno's IOD plants and IVL's EO/EG plants in Clear Lake, TX.

Exhibit 13: Oxides and olefins production sites

Source: IVL

Exhibit 14: PO/MTBE production site

Source: IVL

Logistics is key. The IPN site is highly competitive, with the navigable Neches River nearby, along with a seaport for exported products and imported feedstock deliveries. Other logistical possibilities include shipments by truck, railcar, pipeline, barge, drum, and ocean-going tanker.

Exhibit 15: Dock site for import and export from the plant

Source: IVL

Exhibit 16: Joint wastewater treatment plant

Source: IVL

Given the highly integrated production complex, IPN in particular is expected to be the key catalyst for IVL’s IOD group, which in turn should be the key catalyst to drive IVL’s EBITDA higher in 2022-23.

Based on our projection of y-y significant improvements in the operations and margins of IVL’s IOD product group – which suffered from multiple external events including a freak winter storm due to the polar vortex, hurricanes, and the global Covid-19 outbreak in 2021 – we expect to see a sharp rise in the utilisation rate to over 90% in 2022-23, up from 84% in 2021.

Exhibit 17: IOD integrated plant complex

Sources: IVL; FSSIA

Exhibit 18: Surfactants production plant

Sources: IVL; FSSIA

Rail is the most efficient transportation method for IPN. Most feedstock and product deliveries are transported via rail car. Multiple railway sidings on the IPN site allow IPN to transport products to and from each production site.

Strengthening its packaging segment in Vietnam

On 10 Jan-22, IVL announced the acquisition of a 100% stake in Ngoc Nghia (NN), a producer of PET preforms, packaging, bottles, and closures, with three production plants in northern and southern Vietnam at a cost of USD118m. The transaction is expected to be completed by 1Q22.

We are positive on this acquisition given that: 1) the move is IVL's first entry into Vietnam's high-growth market, with IVL projecting 8% CAGR demand growth in 2022-25; 2) the acquisition could strengthen IVL's packaging segment, bringing the total capacity to 0.3mtpa; 3) it could enhance IVL's EBITDA margin as the packaging business is a high-margin segment with an EBITDA margin of more than 20% vs IVL's overall EBITDA margin of 10-15%; and 4) the acquisition cost is reasonable at 8-9x, in line with the industry average, and has the potential to generate an IRR of over 10%.

In the past 10 years, IVL has grown its EBITDA from its packaging unit from USD6m in 2011 to USD84m in 2021, with the EBITDA margin rising from 14% in 2011 to 24% in 2021. With the acquisition of NN, we expect its EBITDA to grow to USD100m and the EBITDA margin to remain high at 22-23%.

Exhibit 21: NN is a leading packaging producer in Vietnam

Source: IVL

Exhibit 22: Rigid plastic packaging segment growth is forecast to reach a CAGR of 8% in 2022-25

Source: IVL

4Q21 net profit to hit THB8.1b

We think one of the potential catalysts driving up IVL's share price within the next six months would be if Bloomberg consensus upgrades its net profit forecasts on IVL in 2022-23 by 30-50%. We think IVL's strong EBITDA from the IOD and combined PET groups could positively surprise the market's expectations, based on the following:

- A q-q higher sales volume to 3.8mt, up from 3.73mt in 3Q21, driven by the higher utilisation rates of all three units – combined PET, IOD, and fibres – with an average utilisation rate of 88%;
- Higher EBITDA to USD480m, up from USD437m in 3Q21 and surpassing the high EBITDA of USD477m in 2Q21, due to the high product margins;
- Flattening core EBITDA margin to 12.4% vs 12.5% in 3Q21, driven by the higher margins of PET-PTA and fibres due to stronger demand;
- Inventory gain of USD30m vs USD28m in 3Q21.

Exhibit 23: 4Q21/2021 net profit forecasts

Sources: IVL; FSSIA estimates

Margin on the rise

IVL has continued to see a stronger product margin trend, particularly for its two key products, PET and PTA, which saw their integrated PET-PTA margin jump markedly to USD326/t in Dec-21 in Asia and USD848/t in Western markets (North America and Europe), driven mainly by the m-m higher PTA-paraxylene (PX) margin to offset the m-m weaker PET-PTA margin.

While the integrated PET-PTA margin in Asia is at its highest level since the 1H18 cyclical peak, the integrated PET-PTA margin of USD848/t in Western markets is also at its highest level since 4Q19, thanks to strong demand growth, higher import barriers in the form of higher tax rates, and a sharp rise in the intercontinental freight cost triggered by seaport traffic jams that are likely to continue into 2022.

Exhibit 24: Asia industry PET and PTA spread

Source: IVL

Exhibit 25: Western industry PET and PTA spread

Source: IVL

Meanwhile, the margins of mono ethylene glycol (MEG) and MTBE have been healthy, with the MEG-ethylene margin remaining high over USD450/t in Dec-21 and the MTBE margin rebounding to USD200/t in Dec-21. This should reduce the net losses from MTBE for IVL's IOD group in 4Q21 and 2022, based on our estimate.

Exhibit 26: US MEG industry integrated spread

Source: IVL

Exhibit 27: US MTBE industry spread

Source: IVL

We believe IOD products will be the key driver for a potentially surprising earnings upside for IVL and are likely to generate strong EBITDA of over USD150m-200m in 2022-23 from Oxiteno (USD150m) and USD100m EBITDA from the ethane cracker in Lake Charles, LA, which started commercial operations in Nov-21.

Exhibit 28: IVL and Oxiteno's IOD product portfolios

EPS and target price revisions

We maintain BUY and raise our EPS forecasts for 2021-23 by 6.2-18.9% to incorporate: 1) our change in PET margin assumptions by 14-20% to reflect the higher-than-expected margin outlook; and 2) our 23.5-66.7% higher IOD EBITDA estimates to incorporate the higher margins from the acquisition of Oxiteno.

Sources: IVL; FSSIA estimates

IVL remains our top pick in the Thai petrochemical sector given its strong net profit growth in 2021-23, driven by: 1) higher capacity growth from M&As (Oxiteno for IOD and NN for packaging); 2) higher product margins for both PET, PTA, and IOD, thanks to the much stronger demand outlook in 2022; and 3) the benefit of the margin increase for IVL's 5mt capacity of PET and PTA sales volumes in North American and European markets which we expect to generate up to USD450m in additional EBITDA y-y in 2022 starting in Jan-22.

Level	
Certified	This level indicates practical participation with thoroughly examination in relation to the recommended procedures from the audit committee or the SEC's certified auditor, being a certified member of Thailand's Private Sector Collective Action Coalition Against Corruption programme (Thai CAC) or already passed examination to ensure independence from external parties.
Declared	This level indicates determination to participate in the Thailand's Private Sector Collective Action Coalition Against Corruption programme (Thai CAC)

Disclaimer:

The disclosure of the Anti-Corruption Progress Indicators of a listed company on the Stock Exchange of Thailand, which is assessed by Thaipat Institute, is made in order to comply with the policy and sustainable development plan for the listed companies of the Office of the Securities and Exchange Commission. Thaipat Institute made this assessment based on the information received from the listed company, as stipulated in the form for the assessment of Anti-corruption which refers to the Annual Registration Statement (Form 56-1), Annual Report (Form 56-2), or other relevant documents or reports of such listed company. The assessment result is therefore made from the perspective of Thaipat Institute that is a third party. It is not an assessment of operation and is not based on any inside information. Since this assessment is only the assessment result as of the date appearing in the assessment result, it may be changed after that date or when there is any change to the relevant information. Nevertheless, FSS International Investment Advisory Company Limited does not confirm, verify, or certify the accuracy and completeness of the assessment results.

Note: Companies participating in Thailand's Private Sector Collective Action Coalition Against Corruption programme (Thai CAC) under Thai Institute of Directors (as of June 24, 2019) are categorised into: 1) companies that have declared their intention to join CAC, and; 2) companies certified by CAC.

Company	Ticker	Price	Rating	Valuation & Risks
Indorama Ventures	IVL TB	THB 47.25	BUY	The key downside risks to our EV/EBITDA-based TP are weaker-than-expected margins for PX-PTA and PET-PTA, lower demand for polyester, and delays in IVL's projects.
IRPC PCL	IRPC TB	THB 4.06	BUY	Key risks to our positive view and EV/EBITDA-based target price are weaker-than-expected oil product demand growth and lower-than-expected PP-naphtha and SM-benzene margins.
PTT Global Chemical	PTTGC TB	THB 60.25	BUY	The key downside risks to our EV/EBITDA-based TP are the weaker-than-expected HDPE price and HDPE-naphtha margin.
Siam Cement	SCC TB	THB 389.00	BUY	Downside risks to our SOTP based TP include 1) a lower-than-expected demand for chemicals, CBM, and packaging; 2) rising coal costs for its cement and packaging units; and 3) weaker demand from the automobile industry that could erode the demand for SCC's chemical unit and its dividend contributions.
Eastern Polymer Group	EPG TB	THB 12.40	BUY	Downside risks to our EV/EBITDA-based target price include 1) a sharp rise in feedstock prices, driven mostly by a higher oil price; and 2) lower-than-expected demand for plastics used for insulators and the automobile and packaging industries.

Additional Disclosures

Target price history, stock price charts, valuation and risk details, and equity rating histories applicable to each company rated in this report is available in our most recently published reports. You can contact the analyst named on the front of this note or your representative at Finansia Syrus Securities Public Company Limited

FSSIA may incorporate the recommendations and target prices of companies currently covered by FSS Research into equity research reports, denoted by an 'FSS' before the recommendation. FSS Research is part of Finansia Syrus Securities Public Company Limited, which is the parent company of FSSIA.

All share prices are as at market close on 11-Jan-2022 unless otherwise stated.

RECOMMENDATION STRUCTURE

Stock ratings

Stock ratings are based on absolute upside or downside, which we define as (target price* - current price) / current price.

BUY (B). The upside is 10% or more.

HOLD (H). The upside or downside is less than 10%.

REDUCE (R). The downside is 10% or more.

Unless otherwise specified, these recommendations are set with a 12-month horizon. Thus, it is possible that future price volatility may cause a temporary mismatch between upside/downside for a stock based on market price and the formal recommendation.

* In most cases, the target price will equal the analyst's assessment of the current fair value of the stock. However, if the analyst doesn't think the market will reassess the stock over the specified time horizon due to a lack of events or catalysts, then the target price may differ from fair value. In most cases, therefore, our recommendation is an assessment of the mismatch between current market price and our assessment of current fair value.

Industry Recommendations

Overweight. The analyst expects the fundamental conditions of the sector to be positive over the next 12 months.

Neutral. The analyst expects the fundamental conditions of the sector to be maintained over the next 12 months.

Underweight. The analyst expects the fundamental conditions of the sector to be negative over the next 12 months.

Country (Strategy) Recommendations

Overweight (O). Over the next 12 months, the analyst expects the market to score positively on two or more of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.

Neutral (N). Over the next 12 months, the analyst expects the market to score positively on one of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.

Underweight (U). Over the next 12 months, the analyst does not expect the market to score positively on any of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.
