Expect a strong recovery

- We expect BEC to report an impressive core earnings result in 4Q21 of THB301m (+112% q-q).
- There could be a 20% upside to our 2021E net profit to THB768m.
- Maintain BUY with the TP of THB15.

Impressive earnings in 4Q21

Thanks to the strong recovery in TV advertising expenditure (adex), we expect BEC's TV revenue to surge by 29% q-q to THB1.4b – its highest TV revenue in the past two years since Covid-19 hit Thailand in 2020. Its 4Q21 utilisation rate should improve from 60% in 3Q21 to 75%, while its ad rate should also grow to THB82,000/min in 4Q21 vs THB79,800/min in 3Q21. Global content licensing (GCL) and digital revenue should remain flattish due to the pandemic impact. We anticipate that BEC's 4Q21 GPM should also improve to 42%, while SG&A-to-sales should increase due to the seasonal effect of its rebate expense. As a result, we expect BEC's core net profit in 4Q21 to reach THB301m (+112% q-q).

High potential to beat our earnings estimate in 2020

Thanks to the expectation of strong 4Q21 results, there could be a 20% upside to our 2021E net profit of THB641m to THB768m. It should also beat the Bloomberg consensus expectation of THB676m. Moreover, the company has the potential to increase its ad rate as its utilisation rate has already reached a high level. Notably, we project its 2022 ad rate and utilisation rate at only THB83,720/min and 72%, respectively. We maintain our 2021 forecast, awaiting updates from the analyst meeting.

Solid TV ratings helped the company gain higher revenue

BEC had the most stable TV ratings in 2021. Its TV ratings stood at 1.078 (+0.4% m-m) in Dec-21, compared to Thailand's total TV ratings that dropped 4% m-m. BEC has boosted its TV market share to 16%, giving it the second highest TV ratings in Thailand. Moreover, its news programs such as Morning News and Hone-Krasae currently have a utilisation rate of almost 100%, and it has the highest TV rating for news than any other channel for the morning and afternoon time slots.

Maintain BUY with TP of THB15

We believe that BEC has a solid outlook ahead. Its 1Q22 earnings should remain strong, and if the Omicron variant doesn't spread in Thailand further, there is a potential upside risk to our 2022 earnings estimate of THB859m. We maintain BUY on BEC with a TP of THB15. The company is now trading at 32x 2022E P/E (+0.5SD of its mean P/E). The 14% decrease in its share price since Nov-21 presents an opportunity to reinvest in BEC.

Investment thesis

BEC used to be the second biggest TV operator in Thailand, and regularly enjoyed profits of more than THB4b per year. However, changes in consumer behaviour, more competitors, and a continuous decline in advertising expenditure (adex) have hurt BEC, which has booked a loss for three consecutive years.

However, we believe that 2021 will be the first profitable year for the company, given its recent adex recovery and efficient cost cutting, and believe its financial performance could improve significantly next year.

Company profile

BEC's principal business operations are its 1) content business - TV, online, global content licensing, program sourcing, production distribution; and 2) supporting businesses - the production of variety shows and content and promotional campaign activities.

Catalysts

- A strong recovery in 2021 should boost the company's revenue;
- A huge cost reduction;
- If it can expand its market share via global content licensing.

Risks to our call

The key downside risks to our P/E based TP are a lower-than-expected adex recovery and the company's worse-than-expected cost reduction.

RECOMMENDATION STRUCTURE

Stock ratings

Stock ratings are based on absolute upside or downside, which we define as $(\text{target price}^* - \text{current price}) / \text{current price}$.

BUY (B). The upside is 10% or more.

HOLD (H). The upside or downside is less than 10%.

REDUCE (R). The downside is 10% or more.

Unless otherwise specified, these recommendations are set with a 12-month horizon. Thus, it is possible that future price volatility may cause a temporary mismatch between upside/downside for a stock based on market price and the formal recommendation.

* In most cases, the target price will equal the analyst's assessment of the current fair value of the stock. However, if the analyst doesn't think the market will reassess the stock over the specified time horizon due to a lack of events or catalysts, then the target price may differ from fair value. In most cases, therefore, our recommendation is an assessment of the mismatch between current market price and our assessment of current fair value.
