### Still profitable despite y-y double gas cost

BGRIM's 1Q22 net profit (NP) was THB23m, down 88% q-q and 96% y-y. Excluding non-recurring items, 1Q22 core NP was THB34m, down 84% q-q and 95% y-y. The key factors were 1) higher revenue of THB14.8b (+14% q-q, +41% y-y) on the back of y-y rising demand from industrial users (IU) in both Thailand and Vietnam and revenue from BGRIM's new service business venture; 2) 57% y-y and 13% q-q higher electricity revenue for the power sold to the Electricity Generating Authority of Thailand due to strong demand; 3) solid revenue from steam due to higher demand from IUs; and 4) an unrealised FX gain of THB8m.

### New growth driver via in-house project development expertise

The EBITDA margin plunged to 14.7% in 1Q22, down from 19.2% in 4Q21 and 31.5% in 1Q21, dragged down by the sharp rise in the gas price to THB442/mmbtu (+32% q-q, +100% y-y) due to the impact of the higher priced LNG imports by PTT to compensate for the gas supply shortfall from the Erawan gas field. While the gas price spiked by 32% q-q and 100% y-y, the price of electricity sold to IUs only rose to THB3.46/kWh (+7% y-y, +6% q-q), and the steam price rose to THB1,070/t (+30% y-y, +15% q-q), resulting in margin squeezes for the electricity and steam sold to IUs from BGRIM's small power producers (SPP). In 1Q22, BGRIM began to book revenue of THB0.2b from its new venture to provide services for power plant developers in Thailand and Vietnam, leveraging its in-house project development expertise to generate new earnings growth via a high margin with a marginal cost increase.

### Visible recovery is ahead

We expect BGRIM's net profit to bottom out in 1Q22 and recover marginally in 2Q22 due to the continued high gas cost. However, by 3Q22 we think earnings growth will accelerate, driven by 1) 5 new SPPs under SPP replacement power purchase agreements; and 2) gradually lower gas prices due to the lower price of self-imported LNG.

### Time to reload ahead of strong earnings recovery in 2H22

Maintain BUY and our SOTP-TP of THB44. We think BGRIM is attractive as a turnaround and growth power play on an earnings recovery.

## RECOMMENDATION STRUCTURE

### Stock ratings

Stock ratings are based on absolute upside or downside, which we define as  $(\text{target price}^* - \text{current price}) / \text{current price}$ .

**BUY (B).** The upside is 10% or more.

**HOLD (H).** The upside or downside is less than 10%.

**REDUCE (R).** The downside is 10% or more.

Unless otherwise specified, these recommendations are set with a 12-month horizon. Thus, it is possible that future price volatility may cause a temporary mismatch between upside/downside for a stock based on market price and the formal recommendation.

\* In most cases, the target price will equal the analyst's assessment of the current fair value of the stock. However, if the analyst doesn't think the market will reassess the stock over the specified time horizon due to a lack of events or catalysts, then the target price may differ from fair value. In most cases, therefore, our recommendation is an assessment of the mismatch between current market price and our assessment of current fair value.

### Industry Recommendations
