Two gains boosted 1Q22 earnings

SCN posted a 1Q22 net profit (NP) of THB269m, up 9x q-q and 11x y-y, but a 1Q22 core net loss of THB36m, down from NPs of THB38m in 4Q21 and THB29m in 1Q21. In 1Q22, SCN booked non-recurring items worth THB322m, comprising THB121m from the divestment gain of its industrial compressed natural gas (iCNG) unit and a THB201m gain from the change of status in its investment in Pharmaceutical Plants Company. Key points were: 1) lower revenue from its natural gas-related business at THB212m (-18% y-y) and a lower gross profit (GP) at THB9.9m (-77% q-q, -76% y-y); 2) stronger revenue from its automotive unit at THB40m (+30% y-y) with a higher GP at THB5m (+20% y-y), mainly from the maintenance contract for 489 natural gas for vehicle (NGV) buses; 3) a 24% y-y drop in revenue from renewable energy to THB17m, with a lower GP at THB13m (-30% q-q, +7% y-y) due to the seasonality in electricity sales; and 4) lower revenue from logistics at THB61m (-10% y-y) with a gross loss of THB20m, down from a GP of THB3m in 4Q21.

Still weak operating performance in 1Q22

Despite the higher oil price, the natural gas-related unit continued to see weaker revenue from NGV stations at THB212m in 1Q22 (-18% y-y) due to the weaker demand and the impact of the de-consolidation of its iCNG unit, of which SCN divested 49% to its new partner, Shizuoka Gas Company. NGV demand in Thailand has rebounded slightly but has been in a structural decline over the past five years as consumers shift to internal combustion engine vehicles or electric vehicles to avoid the high maintenance expenses of NGV vehicles.

Transformation underway

SCN is now in the transformation process to shift away from its core gas NGV to iCNG, focusing on industrial, not consumer, users via its JV. In addition, SCN has entered into a pharmaceutical venture to grow and produce hemp and cannabis-related products.

More attractive on gas and cannabis prospects

We maintain BUY and our SoTP-based target price of THB3.1. We think SCN's ongoing effort to diversify its earnings portfolio away from its natural gas-related unit should gradually yield profits in 2022-23.

RECOMMENDATION STRUCTURE

Stock ratings

Stock ratings are based on absolute upside or downside, which we define as $(\text{target price}^* - \text{current price}) / \text{current price}$.

BUY (B). The upside is 10% or more.

HOLD (H). The upside or downside is less than 10%.

REDUCE (R). The downside is 10% or more.

Unless otherwise specified, these recommendations are set with a 12-month horizon. Thus, it is possible that future price volatility may cause a temporary mismatch between upside/downside for a stock based on market price and the formal recommendation.

* In most cases, the target price will equal the analyst's assessment of the current fair value of the stock. However, if the analyst doesn't think the market will reassess the stock over the specified time horizon due to a lack of events or catalysts, then the target price may differ from fair value. In most cases, therefore, our recommendation is an assessment of the mismatch between current market price and our assessment of current fair value.
