

# Thailand Energy

## Implications of the fire-hit Freeport LNG terminal

- Freeport terminal will have to be shut down for 3 weeks following the explosion, leading to a lower gas price in the US and higher LNG and gas prices outside the US.
- The EIA expects the high levels of US LNG exports to continue into 2022, thanks to the continued strong global natural gas demand.
- We think PTTEP, BANPU, and IVL are the winners from the shutdown.

### Fire incident at Freeport LNG terminal could stir up the global gas market

According to Natural Gas Intelligence, an explosion occurred at 11.40am Central Time at the Freeport LNG terminal facility on Quintana Island in Texas on Wednesday 8 Jun-22. While the cause of the fire remains unclear, it will have a decided albeit likely temporary impact on the US' LNG capacity. Freeport is one of the largest LNG terminals in the US with a capacity of 2bcfd from three trains, or around 16% of the US' total LNG capacity of 14bcfd (106mtpa). It is also the only liquefaction facility in the US and one of the only two export terminals in the world that uses electric motors vs conventional gas turbines to drive the liquefaction compressors, according to the Energy Information Administration (EIA).

### Freeport fire incident to lead to lower gas price in US but higher gas price in EU

According to Reuters, the Freeport terminal will have to be shut down for 3 weeks following the explosion, leading to a lower gas price in the US and higher LNG and gas prices outside the US. The US Henry Hub (HH) benchmark gas price has plunged by 8.9% to USD8.2/mmbtu after the explosion. Prior to the incident the Freeport terminal had been running near maximum capacity in May-22, with 2.6bcfd of feed gas nominations on the pipelines. The HH price had been strengthened in the past few months due to the strong demand on the back of the hot weather in the US, LNG exports, low inventories, and lagging domestic gas production. On the demand side, we think the gas prices in Europe and Asia, the net import markets for gas, will be higher given the tighter gas supply.

### US LNG exports to rise, becoming the world's top exporter by 2022

Despite the LNG supply disruption at Freeport for 3 weeks, the EIA expects the high levels of US LNG exports to continue into 2022, averaging 11.3bcfd in 2022, up 16% y-y, thanks to the continued strong global natural gas demand to accommodate the US' additional LNG export capacity in 2022-23. In 2022, the EIA expects an additional 3mtpa capacity of LNG exports to come on stream, which should help alleviate the currently tight demand-supply ratio of the global gas market as a result of the sanctions against Russia's energy trade.

### Winners from the Freeport LNG incident – PTTEP, BANPU, and IVL

We think PTTEP, BANPU, and IVL are the winners from the 3-week shutdown of Freeport terminal. PTTEP will benefit from the high price for the gas produced in the Gulf of Thailand, Myanmar, and Malaysia, while BANPU's shale gas EBITDA should rise q-q in 2Q22 as the lower HH price will lead to lower hedging losses to offset the lower ASP for the shale gas sales volume. IVL should see stronger EBITDA thanks to its two IOD asset acquisitions in 2020-1Q22, driven by wider margins on lower energy costs and strong IOD margins.

**Disclaimer:**

The disclosure of the Anti-Corruption Progress Indicators of a listed company on the Stock Exchange of Thailand, which is assessed by Thaipat Institute, is made in order to comply with the policy and sustainable development plan for the listed companies of the Office of the Securities and Exchange Commission. Thaipat Institute made this assessment based on the information received from the listed company, as stipulated in the form for the assessment of Anti-corruption which refers to the Annual Registration Statement (Form 56-1), Annual Report (Form 56-2), or other relevant documents or reports of such listed company. The assessment result is therefore made from the perspective of Thaipat Institute that is a third party. It is not an assessment of operation and is not based on any inside information. Since this assessment is only the assessment result as of the date appearing in the assessment result, it may be changed after that date or when there is any change to the relevant information. Nevertheless, FSS International Investment Advisory Company Limited does not confirm, verify, or certify the accuracy and completeness of the assessment results.

Note: Companies participating in Thailand's Private Sector Collective Action Coalition Against Corruption programme (Thai CAC) under Thai Institute of Directors (as of June 24, 2019) are categorised into: 1) companies that have declared their intention to join CAC, and; 2) companies certified by CAC.

Company	Ticker	Price	Rating	Valuation & Risks
Banpu	BANPU TB	THB 13.10	BUY	We see downside risks to our SoTP-based TP from lower coal prices, higher diesel costs and any unplanned shutdowns of its power plants.
PTT Explor & Prod	PTTEP TB	THB 174.00	BUY	Risks our TP, which is based on EV/EBITDA, are a sharp decline in oil price and a potential earnings downside from government intervention.
Indorama Ventures	IVL TB	THB 51.50	BUY	The key downside risks to our EV/EBITDA-based TP are weaker-than-expected margins for PX-PTA and PET-PTA, lower demand for polyester, and delays in IVL's projects.

### Additional Disclosures

Target price history, stock price charts, valuation and risk details, and equity rating histories applicable to each company rated in this report is available in our most recently published reports. You can contact the analyst named on the front of this note or your representative at Finansia Syrus Securities Public Company Limited

FSSIA may incorporate the recommendations and target prices of companies currently covered by FSS Research into equity research reports, denoted by an 'FSS' before the recommendation. FSS Research is part of Finansia Syrus Securities Public Company Limited, which is the parent company of FSSIA.

All share prices are as at market close on 09-Jun-2022 unless otherwise stated.

## RECOMMENDATION STRUCTURE

### Stock ratings

Stock ratings are based on absolute upside or downside, which we define as  $(\text{target price}^* - \text{current price}) / \text{current price}$ .

BUY (B). The upside is 10% or more.

HOLD (H). The upside or downside is less than 10%.

REDUCE (R). The downside is 10% or more.

Unless otherwise specified, these recommendations are set with a 12-month horizon. Thus, it is possible that future price volatility may cause a temporary mismatch between upside/downside for a stock based on market price and the formal recommendation.

\* In most cases, the target price will equal the analyst's assessment of the current fair value of the stock. However, if the analyst doesn't think the market will reassess the stock over the specified time horizon due to a lack of events or catalysts, then the target price may differ from fair value. In most cases, therefore, our recommendation is an assessment of the mismatch between current market price and our assessment of current fair value.

## Industry Recommendations

**Overweight.** The analyst expects the fundamental conditions of the sector to be positive over the next 12 months.

**Neutral.** The analyst expects the fundamental conditions of the sector to be maintained over the next 12 months.

**Underweight.** The analyst expects the fundamental conditions of the sector to be negative over the next 12 months.

## Country (Strategy) Recommendations

**Overweight (O).** Over the next 12 months, the analyst expects the market to score positively on two or more of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.

**Neutral (N).** Over the next 12 months, the analyst expects the market to score positively on one of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.

**Underweight (U).** Over the next 12 months, the analyst does not expect the market to score positively on any of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.
