A weak 2Q22 on rising costs and weak revenue

PSH reported a weak 2Q22 net profit of THB430m, down 22% q-q but up 1% y-y, missing Bloomberg's consensus estimate by 5% and ours by 9%. Revenue dropped to THB5.3b, down 10% q-q and 17% y-y due to the 26% y-y weaker revenue from low-rise projects at THB3.7b (+3% q-q). Revenue from high-rise condominium projects weakened q-q to THB1.4b, down 3% q-q but up 4% y-y. Hospital revenue rose to THB443m in 2Q22 after the operational start-up of Vimut Hospital in May 2022. Share of profits rose to THB9m in 2Q22, up from a THB1m net loss in 2Q21.

Weaker revenues in all segments

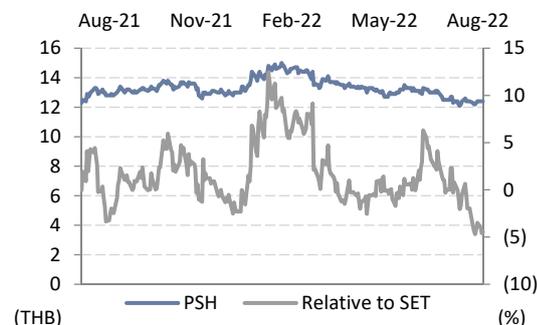

In the low-rise segment, revenue from townhouses dropped to THB1.9b in 2Q22, down 28% y-y, while revenue from single-detached houses was at THB818m, down 26.1% y-y, and revenue from condominiums declined to THB345m, down 10.9% y-y. PSH recorded revenue from land sales of THB643m in 1H22.

Margins lowered on rising costs

While the gross margin increased to 31% in 2Q22, the operating margin dropped to 10.5% in 2Q22, down from 13% in 1Q22 and 11.1% in 2Q21 due to rising material costs for the real estate segment. The net margin declined q-q to 8% in 2Q22 due to the rising SG&A-to-sales ratio which jumped to 20.5% in 2Q22, up from 16.7% in 1Q22 and 17.3% in 2Q21 due to rising costs of hospital operations and higher staff expenses.

Vimut Hospital turnaround is key

We maintain BUY and our TP of THB15, pegged at 9.5x 2022E P/E, or at its 5-year average. We think the worst period of poor sales and revenue growth is over and the rising cost impact should soon subside in the next few months as the prices of commodities, including steel and cement, have already softened from their peaks in 2Q22. PSH recently opened its Vimut wellness hospital in August 2022 with a 50-bed capacity to provide health-to-home services. The hospital's financial returns should gradually increase and reach breakeven within 2023-24, thereby lowering the net loss contribution to PSH.

RECOMMENDATION STRUCTURE

Stock ratings

Stock ratings are based on absolute upside or downside, which we define as $(\text{target price}^* - \text{current price}) / \text{current price}$.

BUY (B). The upside is 10% or more.

HOLD (H). The upside or downside is less than 10%.

REDUCE (R). The downside is 10% or more.

Unless otherwise specified, these recommendations are set with a 12-month horizon. Thus, it is possible that future price volatility may cause a temporary mismatch between upside/downside for a stock based on market price and the formal recommendation.

* In most cases, the target price will equal the analyst's assessment of the current fair value of the stock. However, if the analyst doesn't think the market will reassess the stock over the specified time horizon due to a lack of events or catalysts, then the target price may differ from fair value. In most cases, therefore, our recommendation is an assessment of the mismatch between current market price and our assessment of current fair value.
