

Thailand Banks

Corporate borrowing boosts loan volume in July

- Overall loan portfolio rose 0.64% m-m due largely to a rise in corporate demand.
- No significant downside risks from a short-term pause in the M-rate hike.
- Maintain OVERWEIGHT with KTB and BBL as our top picks.

Overall loan portfolio increased 0.64% m-m in Jul-22

The overall loan portfolio in Jul-22 for the banks under our coverage (BUC) rose 0.64% m-m, with the expansion coming mainly from the corporate and retail segments. According to BUC, there was stronger corporate demand for both long-term loans and working capital. Regarding the retail segment, most banks saw stronger demand for credit cards and personal loans due to the resumption of business activity and the rising cost of living. Also, mortgage lending continued to minimally increase m-m. The only segment where loan volume was flat to slightly lower was the SME segment. BBL reported the highest growth at 1.42% m-m – as we would expect from a rise in corporate and international loans. KBANK was second, with 1.07% m-m, driven mainly by corporate customers. As for the deposits side, they rose by 0.93% m-m, with the LDR steady at 87%. Due to the excess liquidity in the system, banks did not raise deposits aggressively, in our view.

Short-term pause for M-rate and deposit rate increases

On 10 Aug-22, the Bank of Thailand increased its policy rate by 0.25% to 0.75%. However, the Thai Bankers Association and all Thai banks have decided to postpone their M-rate hikes in the short term to support their clients during the slow economic recovery. At the same time, to mitigate cost of funds, banks are maintaining their deposit rates at the current levels. We think Thai banks might possibly hold off on hiking their M-rates and deposit rates for two to three months, and their benefits from the rate hike might kick in slightly slower than our expectation. However, we do not see significant downside risks to our forecasts.

3Q22 net profit should rise significantly y-y, but drop slightly q-q

We project the BUC's 3Q22 aggregate net profit to rise y-y as we forecast banks' provision stockpiling to decline y-y due to the excess provisions that were set aside in 2020-21. Plus, we believe that loan volumes will increase moderately. We also believe banks' 3Q22 NIMs should be relatively stable q-q. The pause in M-rate and deposit rate hikes should have a limited impact on NIM for banks. The BUC's 3Q22 aggregate net profit might decline q-q from higher OPEX. Due to the full resumption of business activity, we think the BUC will increase their marketing efforts.

Maintain Overweight, with KTB and BBL our top picks

We believe bank share prices have mostly priced in the concerns over high inflation and potential asset deterioration. SETBANK is trading at an undemanding 0.6x 2022E P/BV, despite the ROE recovery and benefits from the rate uptrend. We maintain OVERWEIGHT for long-term investment and retain KTB and BBL as our top picks. We believe they should benefit the most from future rate hikes and face the lowest risk from asset deterioration.

Additional Disclosures

Target price history, stock price charts, valuation and risk details, and equity rating histories applicable to each company rated in this report is available in our most recently published reports. You can contact the analyst named on the front of this note or your representative at Finansia Syrus Securities Public Company Limited

FSSIA may incorporate the recommendations and target prices of companies currently covered by FSS Research into equity research reports, denoted by an 'FSS' before the recommendation. FSS Research is part of Finansia Syrus Securities Public Company Limited, which is the parent company of FSSIA.

All share prices are as at market close on 22-Aug-2022 unless otherwise stated.

RECOMMENDATION STRUCTURE

Stock ratings

Stock ratings are based on absolute upside or downside, which we define as $(\text{target price}^* - \text{current price}) / \text{current price}$.

BUY (B). The upside is 10% or more.

HOLD (H). The upside or downside is less than 10%.

REDUCE (R). The downside is 10% or more.

Unless otherwise specified, these recommendations are set with a 12-month horizon. Thus, it is possible that future price volatility may cause a temporary mismatch between upside/downside for a stock based on market price and the formal recommendation.

* In most cases, the target price will equal the analyst's assessment of the current fair value of the stock. However, if the analyst doesn't think the market will reassess the stock over the specified time horizon due to a lack of events or catalysts, then the target price may differ from fair value. In most cases, therefore, our recommendation is an assessment of the mismatch between current market price and our assessment of current fair value.

Industry Recommendations

Overweight. The analyst expects the fundamental conditions of the sector to be positive over the next 12 months.

Neutral. The analyst expects the fundamental conditions of the sector to be maintained over the next 12 months.

Underweight. The analyst expects the fundamental conditions of the sector to be negative over the next 12 months.

Country (Strategy) Recommendations

Overweight (O). Over the next 12 months, the analyst expects the market to score positively on two or more of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.

Neutral (N). Over the next 12 months, the analyst expects the market to score positively on one of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.

Underweight (U). Over the next 12 months, the analyst does not expect the market to score positively on any of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.
