

Thailand Banks and Diversified Financials

Policy rate increase to 1%

- MPC unanimously voted to increase the monetary policy rate by 25 bps, hiking the policy rate to 1%.
- Banks should benefit from gradual rate hikes, while diversified financials should be negatively impacted. However, we think the negatives have mostly been priced in.
- Maintain Overweight for banks and diversified financials.

Unanimous vote to increase policy rate by 25 bps to 1%

On 28 Sep 2022, the Thai Monetary Policy Committee (MPC) unanimously voted to increase the monetary policy rate by 25 bps, hiking the policy rate to 1% in a bid to tame inflation. This was in line with the market's expectation.

Banks: should start to raise M-rate

We read the unanimous vote to raise the policy rate by 25 bps as positive for Thai banks, and believe banks will start to raise their M-rates following the hike. Due to the fragile, uneven economic recovery and high inflation, we believe banks will raise their rates gradually rather than aggressively. Hence, we forecast banks to increase their M-rates to only 50% of the policy rate hike vs the normal rate of 60-70%. BBL and KTB should benefit the most from the rate hike due to their floating asset bases, in our view, and the rising rate trend should also benefit KBANK, SCB, and TTB, in that order. Due to KKP's and TISCO's high proportion of fixed rate assets, we expect a slightly negative impact on their NIMs, as adjusting their rate charges would take more time. To recap, our current projections are based on a 1% policy rate in 2022 and 1.5% in 1H23.

Diversified financials: negative from higher cost of funds, but mostly priced in

As for diversified financials, they will face a higher cost of funds. However, since we expect that banks will gradually increase their M-rates, and most diversified financial companies have started to lock in their cost of funds by raising debentures, we think a rise in their cost of funds should be manageable. Like the banking sector, we have already factored in a 1% policy rate this year and 1.5% in 1H23. If the MPC raises the policy rate higher than our expectation, BAM, MTC and AEONTS would likely see the largest negative impact on their 2023 bottom lines. Meanwhile, SINGER and JMT would likely have an insignificant impact as they have sufficient capital bases. Details in Exhibit 2.

Maintain Overweight for banks and diversified financials

We maintain our Overweight view on the banking sector. We believe bank share prices have mostly priced in the concerns over high inflation and potential asset deterioration. SETBANK is trading at an undemanding 0.6x 2022E P/BV, despite the ROE recovery and the potential benefits from the rate uptrend. Our top picks are KTB and BBL. We also maintain our Overweight call on diversified financials with a selective Buy strategy. Although the rate uptrend would hurt their margins, we think the slump in their share prices indicates that it has already been factored in. Our most preferred by order are JMT, SINGER, MTC and THANI.

RECOMMENDATION STRUCTURE

Stock ratings

Stock ratings are based on absolute upside or downside, which we define as (target price* - current price) / current price.

BUY (B). The upside is 10% or more.

HOLD (H). The upside or downside is less than 10%.

REDUCE (R). The downside is 10% or more.

Unless otherwise specified, these recommendations are set with a 12-month horizon. Thus, it is possible that future price volatility may cause a temporary mismatch between upside/downside for a stock based on market price and the formal recommendation.

* In most cases, the target price will equal the analyst's assessment of the current fair value of the stock. However, if the analyst doesn't think the market will reassess the stock over the specified time horizon due to a lack of events or catalysts, then the target price may differ from fair value. In most cases, therefore, our recommendation is an assessment of the mismatch between current market price and our assessment of current fair value.
