Continuing balance sheet clean-up

- In-line 3Q22 NP of THB10.6b. Key highlight is the NPL clean-up.
- Expect a drop y-y and q-q in its 4Q22 NP.
- Maintain BUY with the same 2023 GGM-based TP of THB192.

In-line 3Q22 results

KBANK reported an in-line 3Q22 net profit of THB10,574m (+23% y-y, -2% q-q). There was mixed performance in this quarter, in our view, with two improvements. First, its NIM increased by 12 bps q-q to 3.33% from a higher loan yield and higher returns from interbank and investment assets following the policy rate uptrend. Second, its NPLs significantly dropped by 20% q-q – implying an NPL ratio (based on our calculation) of 3.6% vs 4.4% in 2Q22 – from the substantial increase in its write-offs to THB29.7b vs THB14.3b in 2Q22, and a high level of NPL sales to its JV of THB25b. As of 9M22, KBANK wrote-off and sold NPLs worth THB55b and THB51b. Also, its stage 2 loans were reduced by 2% q-q, while its NPL formation (based on our calculation) improved q-q. We think KBANK preventively solved its asset quality problem. There are two negatives, in our view. First, the bank reported a higher loss on its net insurance premium. Second, its fee income still dropped y-y and q-q due to lower mutual fund and brokerage fees from the unfavourable capital market.

Neutral view from analyst meeting

The tone from the meeting was neutral. KBANK expects 2022 GDP growth of 2.9% y-y, with a policy rate of 1.25%. As for its operations, KBANK sees an upside risk to its 2022 NIM compared to its target of 3.1-3.3% due to the increase in its high-yield loan volume. Meanwhile, management expects three downsides in its 2022 target: loan growth and credit cost – due to its active NPL management – plus fee income growth on the back of the gloomy capital market conditions. We think that the significant improvement in its NIM should totally offset the three downside risks. Thus, we maintain our current forecasts.

Expect a y-y and q-q drop in 4Q22 net profit

We expect KBANK's 4Q22 net profit to slightly drop y-y due to a rise in its provisions following its strategy to clean up its portfolio. Meanwhile, its 4Q22 net profit might decline q-q thanks to a rise in seasonal OPEX.

Maintain BUY with 2023 GGM-based TP of THB192

We maintain our BUY call and 2023 GGM-based TP of THB192, as we believe KBANK's net profit and ROE should increase continuously. KBANK's transformation is now in full swing and should unlock its value and increase shareholder returns, in our view.

Investment thesis

We maintain our BUY call as we believe KBANK's net profit and ROE will increase continuously.

Moreover, once the Covid-19 dust has settled, we expect KBANK to post sustainable long-term growth, as it has laid a strong foundation for such. First, KBANK has been heavily investing in digital platforms for more than a decade – we believe it will utilise its digital platform to generate more revenue while reducing operating and funding costs. Second, KBANK is one of the first movers to have expanded into the Asean Economic Community +3. Therefore, its digital investment and international expansion should be a game changer, helping it to become a regional digital bank.

Company profile

Established on 8 June 1945, Kasikornbank was listed on the Stock Exchange of Thailand in 1976. At the end of 2021, KBANK operated 839 branches, down from 860 in 2020 and 10,991 ATMs, up from 10,911 in 2020. In addition, the bank has an international network that includes 16 establishments in eight countries.

Catalysts

Potential share price catalysts for KBANK include:

- Lower credit cost from better asset quality due to setting up JK AMC;
- Faster expansion in the digital lending space than expected;
- The return of foreign fund flows into the Thai stock market.

Risks to our call

Downside risks to our GGM-based TP are 1) prolonged economic sluggishness affecting loan growth and asset quality; and 2) the impact of new regulations from the Bank of Thailand.

In-line 3Q22 results

KBANK reported an in-line 3Q22 net profit of THB10,574m (+23% y-y, -2% q-q). There was mixed performance in this quarter, in our view, with two improvements. First, its NIM increased by 12 bps q-q to 3.33% from a higher loan yield and higher returns from interbank and investment assets following the policy rate uptrend. Second, its NPLs significantly dropped by 20% q-q – implying an NPL ratio (based on our calculation) of 3.6% vs 4.4% in 2Q22 – from the substantial increase in its write-offs to THB29.7b vs THB14.3b in 2Q22. Additionally, its stage 2 loans were reduced by 2% q-q, while its NPL formation (based on our calculation) improved q-q. We think KBANK preventively solved its asset quality problem.

There are two negatives, in our view. First, the bank reported a higher loss on its net insurance premium. Second, its fee income still dropped y-y and q-q due to lower mutual fund and brokerage fees from the unfavourable capital market conditions.

3Q22 key highlights

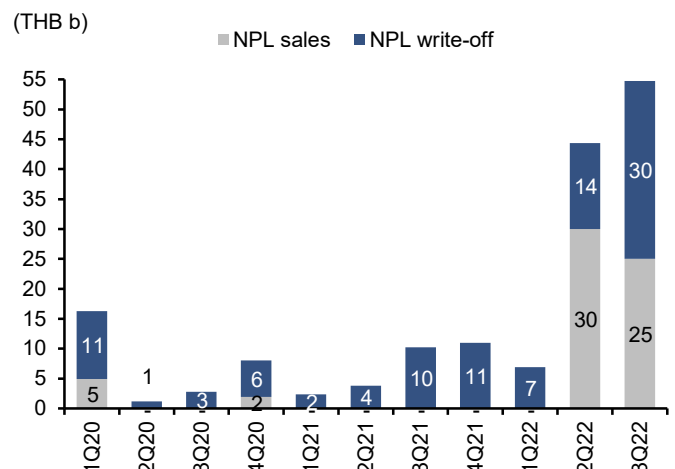

- The total loan volume decreased by 1% q-q (+1.75% YTD) from a significant write-off. Excluding the massive NPL management, its loan volume increased by 4-6% YTD, according to management;
- The NIM increased strongly to 3.33% from 3.21% in 2Q22 from higher returns from interbank assets and its investment portfolio following the interest rate uptrend and the increase in high-yield loans;
- Non-NII plunged by 9% q-q due mainly to a loss in its net insurance premium of THB1b and lower fee income due to the gloomy capital market;
- NPLs significantly decreased by 20% q-q, implying an NPL ratio of 3.6%;
- Its coverage ratio (based on our calculation) went up to 138% from 128% in 2Q22.

Additional Disclosures

Target price history, stock price charts, valuation and risk details, and equity rating histories applicable to each company rated in this report is available in our most recently published reports. You can contact the analyst named on the front of this note or your representative at Finansia Syrus Securities Public Company Limited

FSSIA may incorporate the recommendations and target prices of companies currently covered by FSS Research into equity research reports, denoted by an 'FSS' before the recommendation. FSS Research is part of Finansia Syrus Securities Public Company Limited, which is the parent company of FSSIA.

All share prices are as at market close on 20-Oct-2022 unless otherwise stated.

RECOMMENDATION STRUCTURE

Stock ratings

Stock ratings are based on absolute upside or downside, which we define as $(\text{target price}^* - \text{current price}) / \text{current price}$.

BUY (B). The upside is 10% or more.

HOLD (H). The upside or downside is less than 10%.

REDUCE (R). The downside is 10% or more.

Unless otherwise specified, these recommendations are set with a 12-month horizon. Thus, it is possible that future price volatility may cause a temporary mismatch between upside/downside for a stock based on market price and the formal recommendation.

* In most cases, the target price will equal the analyst's assessment of the current fair value of the stock. However, if the analyst doesn't think the market will reassess the stock over the specified time horizon due to a lack of events or catalysts, then the target price may differ from fair value. In most cases, therefore, our recommendation is an assessment of the mismatch between current market price and our assessment of current fair value.

Industry Recommendations

Overweight. The analyst expects the fundamental conditions of the sector to be positive over the next 12 months.
