Investment thesis

THG is in an expansion mode, as it opened three hospitals during 2018-19. The three hospitals have recently turned profitable and improved the overall performance of the group.

Aside from the new hospitals that had impacted group earnings, Jin Wellbeing is currently a drag on THG, as it missed its presales target, while Covid-19 has slowed the demand for condominiums. The project's fixed costs and interest expenses should continue to be a burden on the group. The operation has improved overall and reached the breakeven point in 3Q22.

We like THG's fundamentals, but have a REDUCE rating due to the expensive valuation and uncertainty over Jin Wellbeing.

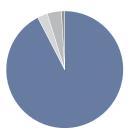

Company profile

The company operates a medical treatment business under nine hospitals, as well as a healthcare solution provider business.

Recap: 3Q22 results review

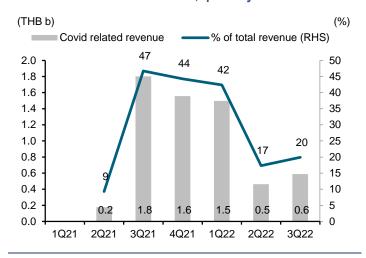

THG reported a 3Q22 core profit of THB372m (-55% y-y, -3% q-q), beating the Bloomberg consensus estimate by 41%. Core profit dropped q-q due to a lower Covid-related service volume. Including a THB65m net gain after tax from land disposal, THG's 3Q22 net profit was THB438m. Revenue grew by 11% q-q. Hospital revenue grew by 13% q-q, driven by non-Covid patient revenue and revenue realised from releasing all remaining Covid-19 vaccines. Revenue from sales of Jin Wellbeing units decreased by 20%, as 29 residential units were transferred in 3Q22 (vs 32 units in 2Q22). COGS increased by 11% q-q, while SG&A increased by 14% q-q, mainly due to donations of Moderna vaccines. As a result, the EBITDA margin slightly improved from 26% in 2Q22 to 27% in 3Q22. The share of loss from Ar Yu Hospital was THB12m in 3Q22 (vs a THB42m share of profit in 1Q22) due to an unrealised FX loss. Excluding the FX loss, share income would amount to THB18m.

RECOMMENDATION STRUCTURE

Stock ratings

Stock ratings are based on absolute upside or downside, which we define as (target price* - current price) / current price.

BUY (B). The upside is 10% or more.

HOLD (H). The upside or downside is less than 10%.

REDUCE (R). The downside is 10% or more.

Unless otherwise specified, these recommendations are set with a 12-month horizon. Thus, it is possible that future price volatility may cause a temporary mismatch between upside/downside for a stock based on market price and the formal recommendation.

* In most cases, the target price will equal the analyst's assessment of the current fair value of the stock. However, if the analyst doesn't think the market will reassess the stock over the specified time horizon due to a lack of events or catalysts, then the target price may differ from fair value. In most cases, therefore, our recommendation is an assessment of the mismatch between current market price and our assessment of current fair value.
