

# **Thailand Market Strategy**

# **Resilience among fragility**

- ความปั่นป่วนในภาคธนาคารครั้งล่าสุดเพิ่มความเสี่ยงต่อการชะลอตัวของเศรษฐกิจโลก ในขณะที่เงินเฟ้อใน ภูมิภาคตะวันตกยังอยู่ในระดับสูง เราคาดว่าการปรับลดอัตราดอกเบี้ยจะไม่เกิดขึ้นในระยะเวลาอันใกล้ หุ้นยัง อยู่ภายใต้แรงกดดันและกระแสเงินคาดว่ายังไหลเข้าสู่ตลาดพันธบัตร
- เศรษฐกิจไทยยังแข็งแรงโดยได้บัจจัยหนุนจากบัจจัยภายในที่ดี โดยเฉพาะภาคการบริโภคและการท่องเที่ยวที่ ฟื้นตัว รวมถึงผลบวกจากการเลือกดั้งที่กำลังจะมาถึง
- เราปรับลด SET Target ลงเหลือ 1,700 คงแนะนำให้นักลงทุนสะสมหุ้นเมื่ออ่อนตัว หุ้นเด่นใน 2Q23 ของเรา ประกอบด้วย AOT, BA, BDMS, BGRIM, CPN, M, MAKRO และ NSL

### ธนาคารชาติสหรัฐฯ (FED) มีนโยบายเข้มงวดกว่าที่ตลาดคาด

การประชุม FED ครั้งล่าสุดสะท้อนว่าการขึ้นอัตราดอกเบี้ยของ FED อาจสิ้นสุดลงในเร็ววันนี้โดยน่าจะขึ้นดอกเบี้ยอีก 25 bps เป็น 5-5.25% ใน 2Q23 อย่างไรก็ดี dot plot ในเดือน มี.ค. 2023 ชี้ให้เห็นว่าคณะกรรมการฯคาดว่าจะไม่มีการ ลดอัตราดอกเบี้ยในปีนี้ซึ่งเป็นนโยบายที่เข้มงวดกว่าที่ตลาดคาดว่าจะปรับลดอัตราดอกเบี้ย 75-100 bps ในช่วง 2H23 เราเห็นว่าปัจจัยสำคัญที่อาจบังคับให้ FED ปรับลดอัตราดอกเบี้ยก็คือการลดลงของเงินเฟ้ออย่างมีนัยสำคัญในระยะ กลางซึ่งหมายความว่าเศรษฐกิจสหรัฐฯ อาจชะลอตัวอย่างรุนแรงหรือถดถอย ด้วยเหตุดังกล่าวเราจึงคาดว่าตลาดหุ้น โลกจะยังอยู่ภายใต้แรงกดดันเนื่องจากกระแสเงินน่าจะไหลเข้าสินทรัพย์ที่มีความเสี่ยงต่ำและสินทรัพย์ที่มีความ ปลอดภัยสูง

### เศรษฐกิจและกลุ่มธนาคารไทยมีความแข็งแรงมากกว่า

ความปั่นปวนในธุรกิจธนาคารในสหรัฐฯ และยุโรปที่เกิดขึ้นในช่วงที่ผ่านมาทำให้ระบบการเงินมีความเสี่ยงมากยิ่งขึ้น ปัจจัยดังกล่าวอาจกระทบความเชื่อมั่นทางธุรกิจและของผู้บริโภคในระยะสั้นถึงกลาง อย่างไรก็ดีเราคิดว่าเศรษฐกิจไทย จะยังแข็งแกร่ง มีเพียงแค่ภาคการส่งออกที่ได้รับผลกระทบ ในขณะที่การบริโภคในประเทศและการท่องเที่ยวยังอยู่ใน ทิศทางขาขึ้น ด้านฐานทุนของธนาคารไทยยังอยู่ในเกณฑ์ดีด้วย Tier 1 และ CAR ratio ที่สูงกว่าเกณฑ์ขั้นต่ำอยู่มาก นอกจากนี้เงินลงทุนของธนาคารไทยส่วนมากอยู่ในพันธบัตรในประเทศซึ่งไม่ได้รับผลกระทบอย่างรุนแรงจากการขึ้น อัตราดอกเบี้ย

### ปรับลดเป้าหมายสำหรับ SET ลงเหลือ 1,700 ยังเลือกหุ้นในประเทศ

ประเทศไทยจะมีการเลือกตั้งทั่วไปในวันที่ 14 พ.ค. 2023 จากการศึกษาของเราโดยมาก SET จะปรับขึ้นโดยเฉลี่ย 1.7% ในช่วง 2 เดือนก่อนการเลือกตั้ง เราคาดว่ารูปแบบดังกล่าวอาจเกิดขึ้นอีกครั้งในปีนี้จากการใช้จ่ายเพื่อการ เลือกตั้งที่คาดว่าจะอยู่ในระดับที่สูงมาก นอกจากนี้ถ้าการเลือกตั้งมีผู้ชนะอย่างขาดลอยจนสามารถจัดตั้งรัฐบาลที่มี เสถียรภาพสูง เราคิดว่าตลาดน่าจะตอบสนองในเชิงบวก ปัจจัยดังกล่าวอาจช่วยเพิ่มความมั่นใจในเศรษฐกิจในระยะ ยาวและ 'Sell in May' อาจไม่เกิดขึ้นในปีนี้

### ปรับลดเป้าหมายสำหรับ SET ลงเหลือ 1,700 ยังเลือกหุ้นในประเทศ

เราปรับลดเป้าหมายสำหรับ SET ในปี 2023 ลงจาก 1,750 เหลือ 1,700 โดยคิดจาก PER ที่ 16.9x เราปรับลด ประมาณการกำไรต่อหุ้นปี 2023 ลงจาก 111 เป็น 101 บาท ยังเติบโตสูง +20% y-y เรายังคาดว่าการปรับตัวลดลงของ SET มาอยู่ในช่วง 1,500-1,550 เป็นโอกาสในการสะสมหุ้นพื้นฐานโดยอิงสมมติว่าไม่เกิดวิกฤตการเงิน เรายังชอบหุ้น ในประเทศและหุ้นที่เกี่ยวข้องกับประเด็นการเปิดประเทศ หุ้นเด่นของเราใน 2Q23 ประกอบด้วย AOT, BA, BDMS, BGRIM, CPN, MAKRO, M และ NSL.

### FED's dot plot indicates peak rate at 5-5.25%; no rate cut this year

The FED recently decided to hike its policy rate by another 0.25% to 4.75-5% in order to fight stubborn inflation, even though there are new negative factors from the financial sector. In particular, US headline CPI remains at a high level, growing by 0.4% m-m and 6% y-y in February, while core CPI grew by 0.5% m-m and 5.5% y-y, which is far above the FED's long-term target of 2%. The FED's primary goal is still price stability. March 2023's dot plot indicates that another rate hike is coming, likely in May 2023, which should see the policy rate peaking at 5-5.25%. This would be in line with our view which anticipates the FED funds rate to peak in 2Q23. However, the FED insists that no rate cuts are in their baseline consideration this year, which is more hawkish than the market's view, which anticipated a rate cut in 2H23. Moreover, the FED cut its GDP growth forecasts for 2023-24 to +0.4% y-y and +1.2% y-y, respectively. This could imply that the FED is considering an economic slowdown or even a small technical recession in 2H23 likely from the very high interest rate environment and financial sector risk. The US treasury market reversed from early last month once again, as 2Y and 10Y bond yields dropped by c120 bps and c40 bps to c4% and c3.6%, respectively. This should reflect that the peak rate is coming soon and heighten concerns about the economy in the medium to long term. We maintain our view that this situation should continue to limit equity upside in the short term, with a greater emphasis on economic concerns than liquidity factors. Fund flows are likely to move into bonds and gold.

#### Banking turmoil should be monitored, but Thai banks remain strong

The collapse of Silicon Valley Bank (SVB), Silvergate Bank, and Signature, plus Credit Suisse's (CS) takeover by UBS reflect the huge selloff in risky assets in March 2023. The US government is considering measures to boost consumer confidence on deposits, while Swiss National Bank initially provided liquidity to CS before shifting to UBS on the takeover deal. These actions could calm investor fears over contagion risks which could spread to other banks and become a financial crisis. However, the current turmoil needs to be monitored in 2Q23 to see if more negative cases occur while central banks keep raising interest rates. In terms of the economy, we anticipate that the current situation could affect consumer confidence in spending, which increases the chance for US and EU economic slowdowns in the coming quarters, while CPI could drop faster than the market previously anticipated.

For the Thai banking sector, we do not see a negative impact from the recent financial turmoil. This is because Thai banks' investment exposures are largely in the local bond market, which is more stable and resilient than those in the US and EU markets. The Bank of Thailand (BoT) has not aggressively raised the interest rates when compared with the FED and European Central Bank due to lower CPI pressure. In addition, Thai banks' fundamentals remain strong with an average Tier 1 ratio and CAR of 15.8% and 19.4%, respectively, as of 2022 – well above the minimum requirement of 8.5% and 12%. Deposits and loan portfolios are well diversified. For 1Q23 earnings, we think Thai banks' aggregate earnings will increase q-q but remain flat y-y, largely due to their higher net interest income, underpinned by the interest rate upcycle. The key market focus remains asset quality.

#### Less pressure from Thai CPI for BoT; maintain peak rate at 2% in June 2023

Thailand's headline inflation rate significantly dropped from +5% y-y in January 2023 to +3.8% y-y in February 2023, while core CPI continued to come down from +3% in January 2023 to +1.9% y-y in February 2023. We expect CPI numbers in the coming months to further decline on a y-y basis from the base effect, as inflation started to rise in 1Q22 at the onset of the Russia-Ukraine war. We anticipate that headline CPI could drop to range of +c3% y-y, while core CPI should continue to stay below +2% y-y and move closer to the BoT's long-term inflation target of 1-3%. This scenario implies that there would not be any significant pressure on the BoT to aggressively tighten its monetary policy, and that economic growth could be supported by the rising domestic consumption and tourism recovery. The BoT recently noted that some demand-pull inflation this year could be another factor to monitor. The BoT raised its policy rate by 25 bps to 1.75% in the March 2023 meeting. We maintain our forecast which sees the BoT raise its policy rate by another 25 bps to 2%, likely hitting the peak level in June 2023.

#### Thailand is entering election mode

Recently, the prime minister dissolved parliament on 20 March 2023, with a general election scheduled to take place on 14 May 2023, one week later than the Election Commission of Thailand had originally scheduled. The University of the Thai Chamber of Commerce anticipates that the election campaign could generate roughly THB50b. With an economic multiplier, it could benefit the economy by USD1-1.2tn, or equal to 0.5-0.7% of GDP.

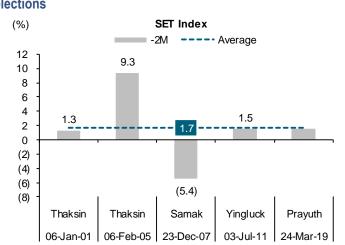

Based on our study, during the two-month period before the last five general elections, the SET index has increased by an average of 1.7% with an 80% probability (i.e. four out of five times). The sectors that performed the best were commerce +2.9%, foods +2.4%, media +4.1% and ICT +5.8%, all of which are domestic sectors and benefit from campaign spending. Conversely, the energy and petrochemical sectors were at -0.5% and -3.6%, respectively. We expect global sectors to be impacted by global commodity prices rather than internal factors. We expect that local institutional investors will be key to driving the SET, and could have a net buy position during the election campaign, as has been seen historically. The SET could rebound in the short term after the huge sell-off in March 2023, dragged down by US and European financial turmoil. However, the upside is still limited as we anticipate that the market will wait to see the election outcome. We assess three possible scenarios as follows:

 <u>Scenario 1</u> - Pheu Thai wins the election in a landslide and cooperates with Palang Pracharath to be the ruling parties to form the government. In that case, we think the market could react very positively, as the incoming government would likely be very stable with a huge majority in the House. We would expect foreign fund flows to be strong as in the 2005 and 2011 elections.

- Scenario 2 United Thai Nation, Palang Pracharath, Bhumjaithai, Democrat, and allies continue to form the government as they did previously, with a marginal majority in the House. In this case, we expect that the market could react neutrally to slightly negatively as the government and its policies would look like the same as in the past four years.
- Scenario 3 Palang Pracharath, United Thai Nation, Bhumjaithai, Democrat, and allies continue to form the government with no majority in the House, but the Senate supports voting for the prime minister. We think that in this case, the government would not be very stable and the House might not be able to pass major or very important bills, which would negatively affect the country's administration and economy. The market should react negatively while foreign fund flows would not likely return in the short term.

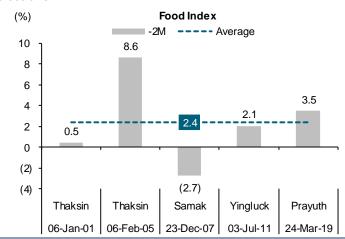

### 'Sell-in-May' or not is up to election results

Historically, 'Sell-in-May' has occurred more often than not for the SET index. In the last ten years, the SET dropped an average of 0.57% in May with a probability of 60% (i.e. 6 out of 10 years). Note that in May 2021, the index fell sharply in the first half of the month but strongly rebounded in the second half. Foreign investors have posted a net sell position on average of THB12b during the month. We think the likelihood of Sell-in-May manifesting this year will depend on the election results. If scenario 1 occurs, foreign inflows should return, reducing the chance of Sell-in-May. Conversely, if scenario 2 or 3 occurs, we expect that history might repeat itself as foreign investors could have less confidence in the new government and the economic outlook.

#### Domestic consumption, tourism recovery key to offset negative export growth

We continue to see private consumption and the tourism industry as key driving engines for the Thai economy in 2023. We expect 1Q23 GDP growth to turn positive q-q and escape a technical recession, supported by the "Shop Dee Mee Kuen" stimulus program, the absence of flooding in Northeast Thailand, and China's reopening. In addition, we anticipate 2Q23 private consumption to continue to grow thanks to the election campaign, while the tourism sector should benefit from the return of Chinese tourists, despite entering the low season in 2Q23. All of these factors should help offset negative export growth due to the global economic slowdown and the high base last year. In particular, the monthly export value in 1H22 was around USD24.8b, while the January 2023 number was at USD20.2b. As a result, we expect to see a significant drop by c10-20% y-y in monthly exports in 1H23. The Bloomberg consensus currently expects 1Q23-2Q23 GDP to grow by 2.9% y-y and 3.3% y-y, respectively, accelerating from +1.4% y-y in 4Q22.

The Office of the National Economic and Social Development Council (NESDC) trimmed its 2023E GDP growth to 2.7-3.7% y-y from 3-4% y-y previously, while the BoT also trimmed its 2023 forecast to +3.6% from +3.7% y-y in the November 2022 report, mainly on the back of weak exports.

We see strong growth momentum for both domestic consumption and the tourism recovery. For the commerce sector, we have seen positive same-store sales growth (SSSG) for six consecutive quarters on average, with 6.9% SSSG estimated for 1Q23. For the tourism sector, we expect international tourist arrivals to be stable or even rise, despite the low season in 2Q23. Tourism should still benefit from the return of Chinese tourists and higher flight numbers, as Thai airlines entered The International Air Transport Association (IATA) summer schedule in late March 2023.

### Revising down 2023E EPS and SET target

Based on 151 listed companies (comprising 86 under our coverage and the rest under the Bloomberg consensus), we expect 2023 EPS to grow by 20% to THB101, down from our forecast of THB111 in December 2022. This is a result of companies' poor 4Q22 earnings, prompting us to revise our 2023 forecasts downward. Along with the slump in energy prices, the energy sector is likely to post only 3% y-y earnings growth, while we expect the food sector's earnings to grow by only 3% y-y in 2023. However, the tourism, transport, and commerce sectors should continue to show healthy growth in 2023 thanks to the tourism and consumption recovery. Meanwhile, petrochemicals should jump from the very low base in 2022. As a result, we decrease our 2023 SET target from 1,750 to 1,700 by using a target PER of 16.9x, the 10-year historical average. This is higher than our previous assumption of SD-0.25 due to the lower bond yield trend, as we believe global interest rates should peak soon.

In terms of valuation, the current SET index level of c1,600 implies an earnings yield of 6.3%, while the 10Y Thai government bond yield is now at 2.3%. This implies that the current earnings yield gap is now at 4% – the highest level since the outbreak of the Covid-19 pandemic. We have found that the earnings yield gap can reach 6-7%, but only when financial crises occur. As a result, we anticipate that this level is attractive enough to accumulate stocks, based on the assumption that no crisis will materialise. We adjust our estimated trading range for the SET in 2Q23 to 1,520-1,660.

## Domestic and defensive plays to outperform market

From all of the factors mentioned above, we maintain our call to stick to domestic sectors over global plays. We expect that those stocks that will benefit from a rise in domestic consumption and a tourism recovery, as well as companies that benefit from lower commodity prices, especially oil and gas, should continue to outperform the market. Based on our investment themes, our top picks for 2Q23 are AOT, BA, BDMS, BGRIM, CPN, M, MAKRO and NSL.

#### Exhibit 27: FSSIA's stock picks for 2Q23

Company	BBG code	Key rationale
Airports of Thailand	AOT TB, BUY, TP THB85	AOT trades at an attractive valuation of 31x FY24E (first nominalised year) P/E, lower than its historical average of 46x. There is a potential upside from the three new airports (Udon Thani, Buriram and Krabi) which should be transferred from the Department of Airports to AOT by 1H23, subject to cabinet approval. Earnings momentum should continue in 2QFY23, and there is the potential for AOT to revise up its passenger volume forecast.
Bangkok Airways	BA TB, BUY, TP THB18.00	We believe that BA is the best tourism-related play on the SET, with a cheap valuation for a near-monopoly business. We think BA is an alternative pick among Thai tourism stocks as it trades at 18x 2024E P/E, lower than AAV (32x), AOT (32x) and the hotel sector's average (33x). Potential upsides include the return of Chinese tourists who typically account for c10% of revenue and gains from Samui Airport improvements (flight capacity expansion and terminal renovation). Its earnings momentum over the next three quarters is promising on China's reopening and the upcoming Samui high season (1Q23 and 3Q23), coupled with dividend income from BDMS in 2Q23.
Bangkok Dusit Medical Services	BDMS TB, BUY, TP THB34.50	We forecast BDMS' earnings to grow by 7% in 2023, driven by the potential to capture more Chinese medical tourists. Thus, international patient revenue should remain its growth driver in 1Q23. We forecast revenue to grow by 6% in 2023 (vs management's projected 6-8% growth over 2023-25). In addition, we estimate the EBITDA margin to remain strong in 2023.
B.Grimm Power	BGRIM TB, BUY, TP THB47	BGRIM is the turnaround stock for a Thai utilities play. We expect BGRIM to see a meaningful improvement in earnings growth momentum in 2023, driven by 1) wider gross margins at its small power producers (SPPs) due to the fuel tariff (Ft) hike that should outpace the gas cost rise; 2) gas cost savings by 6-10% from the seven new SPPs that are scheduled to sequentially come on stream in 2H22-2023; 3) higher volumes of electricity and steam sold to industrial users, mainly from higher demand and seven new SPPs; and 4) a y-y lower gas cost in 2023 as more gas from Erawan replaces US LNG.at the lower prices.
Central Pattana	CPN TB, BUY, TP THB82	We believe CPN is attractive as a domestic play benefiting from Thailand's reopening, tourism recovery, and its solid position as a scalable mixed-use developer. CPN's overall operations in 2022 fully recovered to 2019 levels. We expect a 2023 net profit of THB13b, +17.8% y-y. in our view, CPN is more than a reopening play, with tis committed 5-year plan to develop projects under its retail-led mixed-use development theme.
MK Restaurant Group	M TB, BUY, TP THB59	MK restaurant is Thailand's sukiyaki king. M has continuously expanded its business since 1986. It currently operates 710 restaurants nationwide. We think 2023-24 profit should surge by 59% y-y and 10% y-y, respectively, as profitability returns to near the pre-Covid level in 2024. China's reopening should serve as a catalyst for Laem Charoen, in our view. We recommend BUY with a TP of THB59, based on 22x 2023E P/E, in line with local peers. We expect the company to pay a 2H22 DPS of THB1.0, implying a dividend yield of 1.7%. We like M's profit potential and strong financial position.
Siam Makro	MAKRO TB, BUY, TP THB46	We believe MAKRO is attractive for its strong presence in business-to-business (B2B) grocery wholesaling coupled with Lotus's business-to-consumer (B2C) grocery retailing and consumer-centric brand in Southeast Asia. We forecast MAKRO's core profit in 2023-25 to rise at a 27.8% CAGR, which reflects the robust growth expected from MAKRO and Lotus's, including well-managed costs. Its share price is currently trading at 39x 2023E P/E, which is below its 5-year average of 39.8x P/E.
NSL Foods	NSL TB, BUY, TP THB26	NSL earns its revenue mainly from domestic sales, with CP All (CPALL TB, NR) as its key account. Management targets 17% y-y revenue growth in 2023 at THB4.7b (vs THB3.9b in 2022), driven by a traffic recovery, 7-Eleven branch expansions, and plans for new product launches, such as its new Rice Bar product which will be sold at 10,000 7-Eleven branches within 1Q23. Furthermore, we expect its food service revenue to recover to near the pre-Covid level in 2023. In 1H23, NSL's earnings should return to THB80m-85m per quarter, based on our assumptions, which exclude Rice Bar sales.

#### Public disclosures related to sustainable development evaluation of Thai listed companies

Rating regarding the sustainable development of Thai listed companies, both on the SET and MAI, are publicly available on the website of the Securities and Exchange Commission of Thailand (SEC). Currently, ratings available are 1) "CG Score" by the Thai Institute of Directors Association (Thai IOD); 2) "AGM Checklist" by the Thai Investors Association (TIA), a "CAC certified member" of the Thai Private Sector Collective Action Against Corruption (CAC); and 3) Sustainability Investment List (THSI) by the Stock Exchange of Thailand. The ratings are updated on an annual basis. FSS International Investment Advisory Company Limited does not confirm nor certify the accuracy of such ratings.

#### CG Score by the Thai Institute of Directors Association (Thai IOD)<sup>1</sup>

The CG Score indicates corporate governance (CG) strength in the sustainable development of Thai listed companies. Annually, the Thai IOD, with support from the Stock Exchange of Thailand (SET), surveys and assesses the CG practices of companies and publishes the results on the <u>Thai IOD website</u> in a bid to promote and enhance the CG of Thai listed companies in order to promote compliance with international standards for better investment decisions. The results are from the perspective of a third party, not an evaluation of operations, as of the date appearing in the report, and may be changed after that date.

The five underlying categories and weighting used for the CG scoring in 2022 include the rights of shareholders and equitable treatment of shareholders (weight 25% combined), the role of stakeholders (25%), disclosure and transparency (15%), and board responsibilities (35%).

The CGR report rates CG in six categories: 5 for Excellent (score range 90-100), 4 for Very Good (score range 80-89), 3 for Good (Score range 70-79), 2 for Fair (score range 60-69), 1 for Pass (score range 60-69), and not rated (score below 50).

#### AGM Checklist by the Thai Investors Association (TIA)<sup>2</sup>

The "<u>AGM Checklist</u>" quantifies the extent to which shareholders' rights and equitable treatment are incorporated into business operations and the extent to which information is sufficiently disclosed and the level of its transparency. All the considered factors form important elements of two out of five the CG components. Annually, the TIA, with support from the SEC, leads the project to evaluate the quality of Annual General Meetings of Shareholders (AGMs) and to rate quality of the meetings.

The <u>Checklist</u> contains the minimum requirements under law that companies must comply with, or best practices according to international CG guidance. Representatives of the TIA will attend the meetings and perform the evaluation. The assessment criteria cover AGM procedures before the meeting (45%), at the meeting date (45%), and after the meeting (10%). The first assesses 1) advance circulation of sufficient information for voting; and 2) facilitating of how voting rights can be exercised. The second assesses 1) the ease of attending meetings; 2) transparency and verifiability; and 3) openness for Q&A. The third involves the meeting minutes that should contain discussion issues, resolutions and voting results.

The results are classified into four categories: 5 for Excellent (score 100), 4 for Very Good (score 90-99), 3 for Fair (score 80-89), and not rated (score below 79).

#### CAC certified member by the Thai Private Sector Collective Action Against Corruption (CAC)<sup>3</sup>

A <u>CAC certified member</u> is a listed company whose Checklist satisfies the CAC Certification's criteria and is approved by the CAC Council. The core elements of the Checklist include corruption risk assessment, establishment of key controls, and the monitoring and developing of policies. Note that the CAC does not certify the behaviour of the employees nor whether the companies have engaged in bribery, and Certification is good for three years.

Companies deciding to become a CAC certified member start with by submitting a Declaration of Intent signed by the Chairman of the Board to kick off the 18-month deadline for companies to submit the CAC Checklist for Certification. The 18-month provision is for risk assessment, in place of policy and control, training of managers and employees, establishment of whistleblowing channels, and communication of policies to all stakeholders.

The checklist document will be reviewed by the CAC Certification Committee for adequate information and evidence. It is worth noting that the committee consists of nine professionals in business law, corporate governance, internal audit, financial audit and experienced representatives from certified members.

A passed Checklist will move on to the <u>CAC Council</u> for granting certification approvals. The CAC Council consists of twelve prominent individuals who are highly respected in professionalism and ethical achievements. Among them are former ministers, a former central bank governor, the former head of the Thai Listed Companies Association, Chairman of Anti-Corruption Organizations (Thailand), Chairman of Thai Institute of Directors, and reputable academic scholars.

#### Sustainability Investment (THSI)<sup>4</sup> by the Stock Exchange of Thailand (SET)

Thailand Sustainability Investment (THSI) quantifies responsibility in Environmental, and Social issues, by managing business with transparency in Governance. The THSI serves as another choice for investors who desire to adopt a responsible investment approach, according to the SET.

Annually, the SET will announce the voluntary participation of the company candidates which pass the preemptive criteria, and whose two key crucial conditions are met, i.e. no irregular trading of the board members and executives and a free float of >150 by the number of shareholders, and combined holding must >15% of paid-up capital. Some key disqualifying criteria include a CG score of below 70%; independent directors and free float violation; executives' wrongdoing related to CG, social and environmental impacts, equity in negative territory, and earnings in the red for more than three years in the last five years. To become eligible for THSI, the candidate must pass three indicators in data declaration: Economic (CG, risk management, customer relation management, supply chain management, and innovation); Environmental (environmental management, eco-efficiency, and climate risk); Social (human rights, talent attraction, operational health & safety, community development, and stakeholder engagement); and the incorporation of ESG in business operations.

To be approved for THSI inclusion, verified data must be scored at a 50% minimum for each indicator, unless the company is a part of the Dow Jones Sustainability Indices<sup>5</sup> (DJSI) during the assessment year. The scoring will be fairly weighted against the nature of the relevant industry and materiality.

Note that, from the <u>THSI list</u>, the SET further developed a sustainability <u>SETTHSI Index</u> in June 2018 from selected THSI companies whose 1) market capitalisation > THB5b (~USD150b); 2) free float >20%; and 3) liquidity >0.5% of paid-up capital for at least 9 out of 12 months. The SETTHSI Index is a market capitalisation-weighted index, cap 5% quarterly weight at maximum, and no cap for number of stocks.

#### Disclaimer:

<sup>&</sup>lt;sup>5</sup> Dow Jones Sustainability Indices – <u>Wikipedia</u> – Launched in 1999, DJSI evaluates the sustainability performance of companies based on corporate economic, environmental, and social performance.

Thai Institute of Directors Association (<u>Thai IOD</u>) was established in December 1999 and is a membership organisation that strives to promote professionalism in directorship. The Thai IOD offers directors certification and professional development courses, provides a variety of seminars, forums and networking events, and conducts research on board governance issues and practices. Membership comprises board members from companies ranging from large publicly listed companies to small private firms.

<sup>&</sup>lt;sup>2</sup> Thai Investors Association (<u>TIA</u>) was established in 1983 with a mission to promote investment knowledge and to protect the investment rights of Thai investors. In 2002, the association was appointed by the Securities and Exchange Commission (SEC) to represent individual shareholders. To obtain information for evaluation, the association recruits volunteer investors to join AGMs and score the meetings. Weightings for each meeting are at a 45:45:10 ratio. They have been applied since 2017 and subject to change.

<sup>&</sup>lt;sup>3</sup> Thai Private Sector Collective Action against Corruption (<u>CAC</u>) was founded in 2010 and is 100% privately funded. It is an initiative by the Thai private sector to take part in tackling corruption problems via collective action. The CAC promotes the implementation of effective anti-corruption policies in order to create a transparent business ecosystem by developing a unique certification program for large/medium/small companies to apply for and to control corruption risk systematically and efficiently. The CAC's operations are sponsored by the US-based Center for Private Enterprise (CIPE) and the UK Prosperity Fund.

Sustainability Investment List (THSI), created by the Stock Exchange of Thailand in 2015, comprises the listed companies that conduct sustainable business operations.

#### **Additional Disclosures**

Target price history, stock price charts, valuation and risk details, and equity rating histories applicable to each company rated in this report is available in our most recently published reports. You can contact the analyst named on the front of this note or your representative at Finansia Syrus Securities Public Company Limited

FSSIA may incorporate the recommendations and target prices of companies currently covered by FSS Research into equity research reports, denoted by an 'FSS' before the recommendation. FSS Research is part of Finansia Syrus Securities Public Company Limited, which is the parent company of FSSIA.

All share prices are as at market close on 28-Mar-2023 unless otherwise stated.

### **RECOMMENDATION STRUCTURE**

#### **Stock ratings**

Stock ratings are based on absolute upside or downside, which we define as (target price\* - current price) / current price.

BUY (B). The upside is 10% or more.

HOLD (H). The upside or downside is less than 10%.

REDUCE (R). The downside is 10% or more.

Unless otherwise specified, these recommendations are set with a 12-month horizon. Thus, it is possible that future price volatility may cause a temporary mismatch between upside/downside for a stock based on market price and the formal recommendation.

\* In most cases, the target price will equal the analyst's assessment of the current fair value of the stock. However, if the analyst doesn't think the market will reassess the stock over the specified time horizon due to a lack of events or catalysts, then the target price may differ from fair value. In most cases, therefore, our recommendation is an assessment of the mismatch between current market price and our assessment of current fair value.

#### **Industry Recommendations**

**Overweight.** The analyst expects the fundamental conditions of the sector to be positive over the next 12 months. **Neutral.** The analyst expects the fundamental conditions of the sector to be maintained over the next 12 months. **Underweight.** The analyst expects the fundamental conditions of the sector to be negative over the next 12 months.

#### **Country (Strategy) Recommendations**

**Overweight (O).** Over the next 12 months, the analyst expects the market to score positively on two or more of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.

Neutral (N). Over the next 12 months, the analyst expects the market to score positively on one of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.

Underweight (U). Over the next 12 months, the analyst does not expect the market to score positively on any of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.
