3Q23 results at first glance

3Q23 results beat both our and consensus estimates

Highlights

- 3Q23 results beat estimates: GPSC reported a 3Q23 net profit of THB1.8b (+478.6% q-q and +440.8% y-y), beating both our and BBG's consensus estimates. The main reasons for the robust 3Q23 earnings were the strong operations for all power plants (i.e. IPPs, SPPs, and VSPPs), no major maintenance, higher SPP margins from lower energy costs, higher share of profits on seasonality from the Xayaburi hydropower plant, no coal inventory adjustment in the quarter (vs THB0.3b coal inventory adjustment in 2Q23) and dividend income of THB0.1b from Ratchaburi Power (RPCL). 9M23 net profit accounted for 83% of our 2023E.
- IPP business: IPP gross profit increased 16% q-q or +THB0.3b q-q, mainly from no coal inventory adjustment and a higher availability payment from GIPP.
- SPP business: SPP gross profit improved by 69% or by THB1.7b qq, which was partly due to lower energy costs. 3Q23 gas and coal prices were down by 24% and 28% q-q to THB339/mmbtu and USD224/ton JPU, respectively. The gas costs already included compensation from PTT of ~THB0.18b during the fixed gas price period in Jan-Apr 2023 at THB520/mmbtu, while actual gas prices were lower. Additionally, Glow Energy Phase 5 (shutdown 25 days in 2Q23 with revenue loss of ~THB0.25b) ran at full operations, and IU and steam demand were higher q-q.
- Share of profits and dividend income improved q-q: 3Q23 share of profits increased by 238% q-q or by THB0.4b q-q, mainly from a higher share of profit from Xayaburi hydropower (+THB0.5b q-q) due to seasonality, while share of profits from solar projects both in Thailand and Avaada (ARPL) in India were down due to seasonality. In addition, CFXD, wind projects in Taiwan, still recorded a share of loss of ~THB0.2b due to high construction costs that could not be capitalized during the construction period. GPSC also received dividend income of THB0.1b from RPCL in the quarter.
- Challenging 4Q23 outlook: The 4Q23 earnings outlook is still challenging, as the average Ft will be down from THB0.68/kWh in 3Q23 to THB0.20/kWh in 4Q23, while gas costs should slightly decrease to ~THB330/mmbtu from THB339/mmbtu in 3Q23. Therefore, the SPP margin should be squeezed. In addition, we estimate that share of profits will be lower q-q mainly on seasonality for Xayaburi hydropower plant and no dividend income from RPCL.

Maintain BUY rating on GPSC with TP of THB59/share.

Exhibit 4: FSSIA ESG score implication

| Rating | Score | Implication |
|--------|---------|--|
| **** | >79-100 | Leading its industry peers in managing the most significant ESG risks which not only better cost efficiency but also lead to higher profitability. |
| **** | >59-79 | A mixed track record of managing the most significant ESG risks and opportunities relative to industry peers. |
| *** | >39-59 | Relevant ESG materiality matrix has been constructively addressed, well-managed and incorporated into day-to-day operations, in which targets and achievements are evaluated annually. |
| ** | >19-39 | Relevant ESG materiality matrix has been identified with key management in charge for progress to be followed up on and to provide intensive disclosure. Most targets are conventional and achievable. |
| * | 1-19 | The company has adopted the United Nations Sustainable Development Goals (UN SDGs), established sustainability management guidelines and fully complies with regulations or ESG suggested guidance from related organizations such as the SET and SEC. |

Additional Disclosures

Target price history, stock price charts, valuation and risk details, and equity rating histories applicable to each company rated in this report is available in our most recently published reports. You can contact the analyst named on the front of this note or your representative at Finansia Syrus Securities Public Company Limited.

All share prices are as at market close on 06-Nov-2023 unless otherwise stated.

RECOMMENDATION STRUCTURE

Stock ratings

Stock ratings are based on absolute upside or downside, which we define as (target price* - current price) / current price.

BUY (B). The upside is 10% or more.

HOLD (H). The upside or downside is less than 10%.

REDUCE (R). The downside is 10% or more.

Unless otherwise specified, these recommendations are set with a 12-month horizon. Thus, it is possible that future price volatility may cause a temporary mismatch between upside/downside for a stock based on market price and the formal recommendation.

* In most cases, the target price will equal the analyst's assessment of the current fair value of the stock. However, if the analyst doesn't think the market will reassess the stock over the specified time horizon due to a lack of events or catalysts, then the target price may differ from fair value. In most cases, therefore, our recommendation is an assessment of the mismatch between current market price and our assessment of current fair value.

Industry Recommendations

Overweight. The analyst expects the fundamental conditions of the sector to be positive over the next 12 months. **Neutral.** The analyst expects the fundamental conditions of the sector to be maintained over the next 12 months. **Underweight.** The analyst expects the fundamental conditions of the sector to be negative over the next 12 months.

Country (Strategy) Recommendations

Overweight (O). Over the next 12 months, the analyst expects the market to score positively on two or more of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.

Neutral (N). Over the next 12 months, the analyst expects the market to score positively on one of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.

Underweight (U). Over the next 12 months, the analyst does not expect the market to score positively on any of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.
