Investment thesis

We expect 2Q24 earnings to be the best in seven quarters post-Covid, registering a core profit of THB1.1b (+122% q-q, +134% y-y) as every business unit enters its high season in 2Q. The offshore service business should be the highest contributor both in terms of revenue and gross profit as it schedules to deliver more projects, and there would be less dry docking of vessels. Shipping should enjoy high rates. Also, since fertilisation timing in Vietnam is in 2Q and 4Q, we expect higher fertilizer sales volume both in domestic and export markets.

We maintain our BUY call on TTA with a TP of THB10.

Catalysts

Key catalysts include 1) fewer ships being built, which could reduce global fleet capacity, 2) China's stimulus package to boost the economy, and 3) higher CAPEX by the global energy sector, which creates opportunities for TTA's offshore service segment.

Risks to our call

Downside risks to our P/E-based TP include 1) a fall in freight rates (TCE); 2) exchange rate volatility; 3) slow economic growth in China; and 4) regulatory risks, including new EEXI and CII requirements, effective on 1 Jan 2023.

RECOMMENDATION STRUCTURE

Stock ratings

Stock ratings are based on absolute upside or downside, which we define as (target price* - current price) / current price.

BUY (B). The upside is 10% or more.

HOLD (H). The upside or downside is less than 10%.

REDUCE (R). The downside is 10% or more.

Unless otherwise specified, these recommendations are set with a 12-month horizon. Thus, it is possible that future price volatility may cause a temporary mismatch between upside/downside for a stock based on market price and the formal recommendation.

* In most cases, the target price will equal the analyst's assessment of the current fair value of the stock. However, if the analyst doesn't think the market will reassess the stock over the specified time horizon due to a lack of events or catalysts, then the target price may differ from fair value. In most cases, therefore, our recommendation is an assessment of the mismatch between current market price and our assessment of current fair value.
