2Q24 results at first glance

2Q24 core profit beat our estimate by over 30%

Highlights

- GABLE posted a net profit of THB63m in 2Q24 with one extra gain related to a deferred tax reversal of THB29m. Excluding the deferred tax item, GABLE reported a core profit of THB93m (+961% q-q, +55% y-y), beating our estimate by over 30%.
- The significant q-q surge in 2Q24 core profit was the result of revenue recognition from the very large-scale hardware project worth cTHB700m won in late 1Q24, bringing the revenue from the enterprise solution unit (83% of total revenue) to its highest-ever level at THB1.6b (+75% q-q, +77% y-y).
- The rapidly growing revenue came at the cost of a lower gross margin. The blended gross margin in 2Q24 slid to 15.7% (-210 bps q-q and -520 bps y-y). The SG&A expense was well controlled, resulting in EBITDA growth of 352% q-q and 44.5% y-y.
- The sharp increase in interest expenses was due to the temporary rise in short-term loans to support the bidding project during the previous quarter. Once the company delivered the job, it repaid the loan. We expect GABLE to return to a near-debt-free company again in 3Q24.
- GABLE's revenue and core profit in 1H24 grew 31.1% y-y and 49.5% y-y, respectively.

Outlook

- Typically, the performance in 2H is much higher than in 1H. GABLE's core profit in 1H24, which achieved 49% of our full-year forecast, helps mitigate the downside risks to our estimates.
- Our estimated revenue for 2024 of THB5.9b should be secured by the company's backlog of THB5.6b; 73% of our forecast. We, therefore, maintain our projection.
- We retain our BUY call with the same TP of THB5.50, based on a 2024E P/E of 15.0x.
- Note that PM Srettha's dismissal opens risks to economic growth, stalls the approval of the 2025 budget, and creates a no-confidence mood. The increased risks may lead us to revise our target P/E downward. We are closely monitoring the domestic political situation.

RECOMMENDATION STRUCTURE

Stock ratings

Stock ratings are based on absolute upside or downside, which we define as $(\text{target price}^* - \text{current price}) / \text{current price}$.

BUY (B). The upside is 10% or more.

HOLD (H). The upside or downside is less than 10%.

REDUCE (R). The downside is 10% or more.

Unless otherwise specified, these recommendations are set with a 12-month horizon. Thus, it is possible that future price volatility may cause a temporary mismatch between upside/downside for a stock based on market price and the formal recommendation.

* In most cases, the target price will equal the analyst's assessment of the current fair value of the stock. However, if the analyst doesn't think the market will reassess the stock over the specified time horizon due to a lack of events or catalysts, then the target price may differ from fair value. In most cases, therefore, our recommendation is an assessment of the mismatch between current market price and our assessment of current fair value.
