3Q24 results at first glance

3Q24 profit beat our forecast; manageable asset quality

BBL's 3Q24 net profit stood at THB12.5b, surpassing our estimate and the BBG consensus by 8%, representing a growth of 5.7% q-q and 9.9% y-y. However, PPOP matched our expectation, showing a decline of 1.4% q-q but an increase of 2.7% y-y. Non-NII, including mark-to-market investment gains (FVTPL) and fee income, helped offset rising operating expenses, particularly IT-related costs, increasing income taxes, and a flat NII. Asset quality continued deteriorating, especially in the NPL ratio, but remained within guidance. The high coverage ratio also allowed BBL to significantly reduce credit costs during this period, maintaining the highest level among its peers.

The 9M24 net profit increased to THB34.8b, representing a 6.2% growth y-y and accounting for 83% of our full-year forecast. We expect the 4Q24 net profit to decline significantly due to the peak season for operating expenses—including personnel, IT, and marketing—and a lower NIM, which could offset the anticipated reduction in ECL.

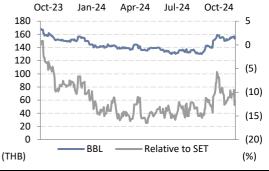

We maintain our 2024-26E net profit growth at a 3.7% CAGR, based on our conservative assumptions without factoring in any positives from government stimulus packages. For 2024, we expect 1.0% y-y net profit growth with a 7.7% ROE due to a large base in 2023 following market interest rate hikes. For 2025-26, we anticipate a net profit recovery of 4.1% y-y and 6.0% y-y, respectively. We retain BBL as our top BUY and 2025 TP of THB184, implying a P/BV of 0.60x, under an expected LT-ROE of 7.7% and COE of 12.2%. BBL trades at a very cheap valuation of 0.53x P/BV, below its 5-yr average of 0.60x, combined with an attractive dividend yield of c4.6-5.1% p.a.

Highlights

(+) NII and NIM surpassed expectations. NII reached THB33.4b, up 0.7% q-q but down 2.2% y-y. NII grew slightly q-q (contrary to our expected contraction) despite a 3.0% q-q, 3.1% y-y, and 1.2% YTD loan contraction, which remains below the full-year 2024 guidance of 3-5% y-y and our target of 3% y-y. The contraction mainly stemmed from loan repayments in the business and commercial, combining with international segments. However, large corporate and retail loans showed positive growth. NIM rose by 5bps to 2.99%, exceeding our flat growth expectation due to loan yields (from lower loan base effects) increasing more than the cost of funds. Overall, the 9M24 NIM was 3.00%, consistent with its guidance and our target of 2.94%, as we expect a decline in NIM in 4Q24.

- (+) Non-NII exceeded expectations. Net fee income aligned with our forecast, increasing by 1.2% q-q and 2.4% y-y, supported by improved bancassurance and mutual fund fee performance. Other non-NII, which performed better than anticipated, was driven by 1) growth in MTM investment gains (THB3.64b vs. THB2.42b in 2Q24), primarily from domestic and international equity securities, and 2) an increase in investment gains, debt securities, of THB721m compared to a loss of THB145m in 2Q24.
- (-) OPEX and the cost-to-income ratio were significantly higher than expected. BBL saw a notable increase in OPEX due to IT-related and marketing expenses. As a result, the 3Q24 cost-to-income ratio reached 47.7%, exceeding our forecast of 45.6% and up from 44.1% in 2Q24. The 9M24 cost-to-income ratio was 46.3%, which is still in line with its 2024 guidance of high-40s% and our forecast of 48.9%, as we expect rising OPEX in 4Q24 due to seasonal factors.
- (-) Asset quality has worsened more than anticipated but is less of a concern, as it aligns with the 2024 guidance. The NPL ratio increased to 3.94%, up from 3.64% in 2Q24. This rise was mainly due to three factors: 1) the expiration of debt forbearance at the end of 2023, causing the NPL ratio to revert to pre-Covid levels (3.40-3.90% during 2017-19); 2) a relapse of restructured loans rather than new formations, which remained low and were mainly in the manufacturing and commercial segments; and 3) its policy of focusing on debt restructuring instead of write-offs and sales. However, the credit cost dropped sharply to 122bps from 153bps in 2Q24, aligning with its guidance of a downward trend in 2H24. As a result, the 3Q24 coverage ratio stood at 267%, down from 283% in 2Q24, maintaining its position as the strongest in the industry.

Exhibit 4: FSSIA ESG score implication

62.41 /100

Rating	Score	Implication
****	>79-100	Leading its industry peers in managing the most significant ESG risks which not only better cost efficiency but also lead to higher profitability.
***	>59-79	A mixed track record of managing the most significant ESG risks and opportunities relative to industry peers.
***	>39-59	Relevant ESG materiality matrix has been constructively addressed, well-managed and incorporated into day-to-day operations, in which targets and achievements are evaluated annually.
**	>19-39	Relevant ESG materiality matrix has been identified with key management in charge for progress to be followed up on and to provide intensive disclosure. Most targets are conventional and achievable.
*	1-19	The company has adopted the United Nations Sustainable Development Goals (UN SDGs), established sustainability management guidelines and fully complies with regulations or ESG suggested guidance from related organizations such as the SET and SEC.

All share prices are as at market close on 17-Oct-2024 unless otherwise stated.

RECOMMENDATION STRUCTURE

Stock ratings

Stock ratings are based on absolute upside or downside, which we define as (target price* - current price) / current price.

BUY (B). The upside is 10% or more.

HOLD (H). The upside or downside is less than 10%.

REDUCE (R). The downside is 10% or more.

Unless otherwise specified, these recommendations are set with a 12-month horizon. Thus, it is possible that future price volatility may cause a temporary mismatch between upside/downside for a stock based on market price and the formal recommendation.

* In most cases, the target price will equal the analyst's assessment of the current fair value of the stock. However, if the analyst doesn't think the market will reassess the stock over the specified time horizon due to a lack of events or catalysts, then the target price may differ from fair value. In most cases, therefore, our recommendation is an assessment of the mismatch between current market price and our assessment of current fair value.

Industry Recommendations

Overweight. The analyst expects the fundamental conditions of the sector to be positive over the next 12 months.

Neutral. The analyst expects the fundamental conditions of the sector to be maintained over the next 12 months.

Underweight. The analyst expects the fundamental conditions of the sector to be negative over the next 12 months.

Country (Strategy) Recommendations

Overweight (O). Over the next 12 months, the analyst expects the market to score positively on two or more of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.

Neutral (N). Over the next 12 months, the analyst expects the market to score positively on one of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.

Underweight (U). Over the next 12 months, the analyst does not expect the market to score positively on any of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.
