EQUITY RESEARCH - COMPANY REPORT

ASIA AVIATION AAV TB

THAILAND / TRANSPORT & LOGISTICS

Ending the year on a high note

- AAV booked a core profit of THB0.1b in 3Q24, slightly missing our estimate.
- Positive feedback from analyst meeting; expect strong 4Q24 with potential core profit profile similar to 1Q24 at THB1.2b.
- Maintain BUY with a TP of THB3.4/shr, based on 16x 2025E P/E.

Record 3Q24 core profit in the lowest season

AAV reported a turnaround 3Q24 core profit of THB0.1b (vs a THB1.0b core loss in 3Q23), slightly missing our estimate due to marginally lower-than-expected ticket fares and ancillary revenue. Including a THB4.2b pre-tax FX gain, AAV posted a net profit of THB3.5b. Passenger revenue jumped 15% y-y. Passengers carried grew by 7% y-y to 4.9m (accounting for 93% of the pre-Covid level) with a strong load factor of 90% (flat y-y). Ticket fares increased by 7% y-y to THB1,847 and exceeded pre-Covid by 27%. Ancillary income grew 1% y-y in 3Q24, with a decline in ancillary income per passenger to THB382 (vs THB404 in 3Q23) due to lower processing fees following a higher booking volume executed through OTA channels. Expenses decreased by 2% y-y mainly due to 5% y-y lower fuel costs following a decline in jet fuel prices. Meanwhile non-fuel costs increased by 1% y-y following 18% y-y higher aircraft maintenance and 19% y-y higher staff costs. As a result, the 3Q24 operating profit margin improved to 7% (vs -6% in 3Q23).

Passenger volume should reach the peak in 4Q24

We attended the analyst meeting today and have positive feedback. Operations in 4Q24 are likely to be stronger than in 1Q24 (which booked a core profit of THB1.2b). AAV plans to increase its seat capacity to 99% of the pre-Covid level in 4Q24 (vs 90% in 1Q24). The load factor remained strong at 90% in Oct with solid forward bookings in Nov and Dec. This should lead the 4Q24 passenger volume to be higher than 5.5m in 1Q24. In addition, jet fuel prices have declined to cUSD88/bbl currently (vs USD103 in 1Q24).

Larger aircraft fleet would provide an upside to 2025

If 4Q24 core profit is at least THB1.2b, this would provide an upside to our 2024E of THB2.6b. Earnings momentum should continue in 2025 as AAV's fleet is larger, from 56 in 2023 to 60 in 2024, and it plans to receive 4-5 additional aircraft per year from 2025 onward. AAV plans to increase its exposure in the domestic, India and Vietnam markets in 2025.

Trading at a cheap valuation

AAV trades at an attractive valuation of 13x 2025E P/E (vs peers' avg. of 14x). Share price catalysts are strong 4Q24 operations and an earnings upside from the declining jet fuel environment.

Investment thesis

We believe AAV is on track for a recovery and expect its passenger volume to recover in 2024. AAV should continue to gain more market share in the domestic market following a faster capacity ramp-up than its peers. Meanwhile, AAV should be able to capture a robust recovery of Chinese tourists, whose volume should recover from 31% of the pre-Covid level in 2023 to 60-70% in 2024.

We expect the cost structure to support its operational turnaround, especially personnel. AAV has reduced its headcount since the Covid pandemic along with aircraft lease payments, as it has negotiated with lessors to restructure lease contracts.

AAV's ticket fares are on an upward trend and have exceeded its pre-Covid level. This should more than offset rising fuel prices and aircraft maintenance costs.

Company profile

AAV owns 100% of Thai AirAsia (TAA, not listed), which is the leading low-cost carrier in Thailand. TAA serves travellers throughout Asia, the Middle East and Europe.

Catalysts

Key potential growth drivers include: 1) more passengers carried following a global tourism recovery; 2) lower jet fuel prices; and 3) strong pent-up demand from Chinese tourists.

Risks to our call

Downside risks to our P/E multiple target price include 1) extraordinary events such as political turmoil and natural disasters; 2) higher-than-expected fuel expenses following an increase in oil prices; and 3) the slower-than-expected recovery of international tourist numbers.

Event calendar

Date	Event
Feb 2025	4Q24 results announcement

Key assumptions

	2024E	2025E	2026E
Number of aircraft (no.)	60	60	60
Pax carried (m)	20.9	21.6	21.7
Load factor (%)	91.3	90.8	90.5
Average ticket fare (THB)	1,985	2,025	2,065
Ancillaries per pax (THB/pax)	398	402	411
Fuel price spot (USD/bbl)	100	100	100

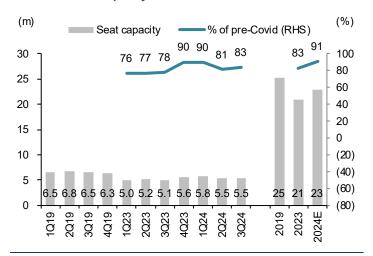

Source: FSSIA estimates

Earnings sensitivity

- For every 1% increase in load factor, we project a 2025 profit increase of 17% and vice versa, all else being equal.
- For every 1% increase in average ticket fare, we project a 2025 profit increase of 12% and vice versa, all else being equal.
- For every 1% increase in Brent spot price, we project a 2025 profit reduction of 5% and vice versa, all else being equal.

Asia Aviation PCL (AAV TB)

Exhibit 10: FSSIA ESG score implication

43.83 /100

Rating	Score	Implication
****	>79-100	Leading its industry peers in managing the most significant ESG risks which not only better cost efficiency but also lead to higher profitability.
****	>59-79	A mixed track record of managing the most significant ESG risks and opportunities relative to industry peers.
***	>39-59	Relevant ESG materiality matrix has been constructively addressed, well-managed and incorporated into day-to-day operations, in which targets and achievements are evaluated annually.
**	>19-39	Relevant ESG materiality matrix has been identified with key management in charge for progress to be followed up on and to provide intensive disclosure. Most targets are conventional and achievable.
*	1-19	The company has adopted the United Nations Sustainable Development Goals (UN SDGs), established sustainability management guidelines and fully complies with regulations or ESG suggested guidance from related organizations such as the SET and SEC.

All share prices are as at market close on 12-Nov-2024 unless otherwise stated.

RECOMMENDATION STRUCTURE

Stock ratings

Stock ratings are based on absolute upside or downside, which we define as (target price* - current price) / current price.

BUY (B). The upside is 10% or more.

HOLD (H). The upside or downside is less than 10%.

REDUCE (R). The downside is 10% or more.

Unless otherwise specified, these recommendations are set with a 12-month horizon. Thus, it is possible that future price volatility may cause a temporary mismatch between upside/downside for a stock based on market price and the formal recommendation.

* In most cases, the target price will equal the analyst's assessment of the current fair value of the stock. However, if the analyst doesn't think the market will reassess the stock over the specified time horizon due to a lack of events or catalysts, then the target price may differ from fair value. In most cases, therefore, our recommendation is an assessment of the mismatch between current market price and our assessment of current fair value.

Industry Recommendations

Overweight. The analyst expects the fundamental conditions of the sector to be positive over the next 12 months.

Neutral. The analyst expects the fundamental conditions of the sector to be maintained over the next 12 months.

Underweight. The analyst expects the fundamental conditions of the sector to be negative over the next 12 months.

Country (Strategy) Recommendations

Overweight (O). Over the next 12 months, the analyst expects the market to score positively on two or more of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.

Neutral (N). Over the next 12 months, the analyst expects the market to score positively on one of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.

Underweight (U). Over the next 12 months, the analyst does not expect the market to score positively on any of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.
