4Q24 results at first glance

4Q24 profit in line, marking new full-year profit high

Highlights

- CPN reported a net profit of THB3.9b for 4Q24 (-5.7% q-q, -2.1% y-y). This included accounting items (such as profit-sharing adjustments, lease agreements for Central Rama 2 pending payment from CPNREIT, and revenue from the renewal of the Central Pinklao lease) totaling a loss of THB302m.
- Excluding these accounting items, the core profit stood at THB4.2b (+1.7% q-q, +5.6% y-y), in line with our expectation. The q-q profit growth is considered strong because marketing expenses are typically high in 4Q, which usually puts pressure on profits.
- Total revenue grew 4.5% q-q to THB12.8b, driven by the growth of food courts, the hotel business, and the residential business. However, rental income from shopping malls declined 5.1% q-q due to renovations at some malls. Despite this, many shopping malls saw record-high foot traffic and revenue. In the hotel business, Hilton Pattaya also recorded an all-time high in both RevPAR and revenue.
- Revenue from the property business in 4Q24 declined by 10.0% y-y due to competition but nearly doubled q-q, driven by the transfers of existing projects. Additionally, four new projects were launched this quarter (two condos and two low-rise houses). However, the gross margin declined to 30.9%, partly due to competition and partly because most of the transferred projects were in non-central locations, which typically yield lower margins.
- The overall performance in 2024 was impressive, with record highs in revenue across all business segments, gross margins, core profit, and a dividend per share of THB2.10 (56% payout ratio). Total revenue grew 8.8% y-y, driven by expansion in all sectors, particularly food courts and hotels. In 2024, CPN opened two new shopping malls (Central Nakhon Sawan and Central Nakhon Pathom), which also contributed to the growth of food courts. The hotel segment achieved record-high revenue due to strong occupancy rates and room rates.
- While the property business fell short of the company's initial target, revenue still grew by 6.8% y-y, and the gross margin remained stable.

Outlook

- The 2024 financial performance was strong, with continued growth momentum expected. We maintain our profit forecast for 2025-27 and our BUY call. CPN shares trade at an attractive 2025E P/E of 12.3x, a P/BV of 2.0x, and a dividend yield of 4.6%.
- We maintain our TP of THB83 (DCF, 7.4% WACC, 2% LTG).

Central Pattana PCL (CPN TB)

Exhibit 4: FSSIA ESG score implication

81.38 /100

| Rating | Score | Implication |
|--------|---------|--|
| **** | >79-100 | Leading its industry peers in managing the most significant ESG risks which not only better cost efficiency but also lead to higher profitability. |
| **** | >59-79 | A mixed track record of managing the most significant ESG risks and opportunities relative to industry peers. |
| *** | >39-59 | Relevant ESG materiality matrix has been constructively addressed, well-managed and incorporated into day-to-day operations, in which targets and achievements are evaluated annually. |
| ** | >19-39 | Relevant ESG materiality matrix has been identified with key management in charge for progress to be followed up on and to provide intensive disclosure. Most targets are conventional and achievable. |
| * | 1-19 | The company has adopted the United Nations Sustainable Development Goals (UN SDGs), established sustainability management guidelines and fully complies with regulations or ESG suggested guidance from related organizations such as the SET and SEC. |

You can contact the analyst named on the front of this note or your representative at Finansia Syrus Securities Public Company Limited.

All share prices are as at market close on 28-Feb-2025 unless otherwise stated.

RECOMMENDATION STRUCTURE

Stock ratings

Stock ratings are based on absolute upside or downside, which we define as (target price* - current price) / current price.

BUY (B). The upside is 10% or more.

HOLD (H). The upside or downside is less than 10%.

REDUCE (R). The downside is 10% or more.

Unless otherwise specified, these recommendations are set with a 12-month horizon. Thus, it is possible that future price volatility may cause a temporary mismatch between upside/downside for a stock based on market price and the formal recommendation.

* In most cases, the target price will equal the analyst's assessment of the current fair value of the stock. However, if the analyst doesn't think the market will reassess the stock over the specified time horizon due to a lack of events or catalysts, then the target price may differ from fair value. In most cases, therefore, our recommendation is an assessment of the mismatch between current market price and our assessment of current fair value.

Industry Recommendations

Overweight. The analyst expects the fundamental conditions of the sector to be positive over the next 12 months.

Neutral. The analyst expects the fundamental conditions of the sector to be maintained over the next 12 months.

Underweight. The analyst expects the fundamental conditions of the sector to be negative over the next 12 months.

Country (Strategy) Recommendations

Overweight (O). Over the next 12 months, the analyst expects the market to score positively on two or more of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.

Neutral (N). Over the next 12 months, the analyst expects the market to score positively on one of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.

Underweight (U). Over the next 12 months, the analyst does not expect the market to score positively on any of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.
