1Q25 results at first glance

1Q25 profit exceeded expectations, but it may be this year's peak

Highlights

- GFPT posted a 1Q25 net profit of THB638m (+67% q-q, +37% y-y), beating expectations by 20%, mainly driven by strong profit sharing from associates. While GFPT's overall operations were solid, they were not particularly exciting.
- Total revenue was roughly in line with expectations (-5% q-q, +2.7% y-y). The y-y growth was supported by a higher export volume, which rose to 8,700 tonnes (+4.8% y-y, but -11% q-q). Domestic sales remained stable.
- The 1Q25 gross margin improved to 14% from 12.8% in 4Q24 and 12.6% in 1Q24, thanks to lower raw material costs, while meat prices rose q-q, boosting profitability.
- The company also managed overall expenses well, partly due to the easing of container shipping constraints, leading to a drop in the SG&Ato-sales ratio to 7.8%, down from 8.2% in both 4Q24 and 1Q24.
- The most notable upside came from profit sharing from associates, which hit a new record of THB322m, accounting for 50% of GFPT's net profit (vs the usual 35-40%). To elaborate, McKey's profit sharing was at THB218m (+167% q-q, +55% y-y), boosted by strong exports and likely a one-off item, and GFN's was at THB103m (+181% q-q, +13% y-y), also helped by a strong export volume.

Outlook

- We are currently reviewing our full-year forecasts, as 1Q25 profit already accounts for 40% of our full-year estimate. However, we preliminarily view 1Q25 as the likely earnings peak for the year.
- We expect 2Q25 net profit to decline q-q if McKey does not contribute another one-off gain. In addition, we have a slightly cautious view following the analyst meeting, where the chicken export volume is expected to soften in 2Q25 both q-q and y-y, down to 8,200–8,300 tonnes, due to a high base last year and continued stock levels among European customers. That said, the company has already secured orders through August, though at similar levels to 2Q25.
- Raw material costs remain low, which should help support the gross margin for the rest of the year. However, it will be important to watch whether chicken prices can hold at THB40-42/kg in 2H25, as we expect, especially as the export volume starts to slow.

GFPT (GFPT TB)

Exhibit 12: FSSIA ESG score implication

40.94 /100

Rating	Score	Implication
****	>79-100	Leading its industry peers in managing the most significant ESG risks which not only better cost efficiency but also lead to higher profitability.
****	>59-79	A mixed track record of managing the most significant ESG risks and opportunities relative to industry peers.
***	>39-59	Relevant ESG materiality matrix has been constructively addressed, well-managed and incorporated into day-to-day operations, in which targets and achievements are evaluated annually.
**	>19-39	Relevant ESG materiality matrix has been identified with key management in charge for progress to be followed up on and to provide intensive disclosure. Most targets are conventional and achievable.
*	1-19	The company has adopted the United Nations Sustainable Development Goals (UN SDGs), established sustainability management guidelines and fully complies with regulations or ESG suggested guidance from related organizations such as the SET and SEC.

Additional Disclosures

Target price history, stock price charts, valuation and risk details, and equity rating histories applicable to each company rated in this report is available in our most recently published reports. You can contact the analyst named on the front of this note or your representative at Finansia Syrus Securities Public Company Limited.

All share prices are as at market close on 09-May-2025 unless otherwise stated.

RECOMMENDATION STRUCTURE

Stock ratings

Stock ratings are based on absolute upside or downside, which we define as (target price* - current price) / current price.

BUY (B). The upside is 10% or more.

HOLD (H). The upside or downside is less than 10%.

REDUCE (R). The downside is 10% or more.

Unless otherwise specified, these recommendations are set with a 12-month horizon. Thus, it is possible that future price volatility may cause a temporary mismatch between upside/downside for a stock based on market price and the formal recommendation.

* In most cases, the target price will equal the analyst's assessment of the current fair value of the stock. However, if the analyst doesn't think the market will reassess the stock over the specified time horizon due to a lack of events or catalysts, then the target price may differ from fair value. In most cases, therefore, our recommendation is an assessment of the mismatch between current market price and our assessment of current fair value.

Industry Recommendations

Overweight. The analyst expects the fundamental conditions of the sector to be positive over the next 12 months.

Neutral. The analyst expects the fundamental conditions of the sector to be maintained over the next 12 months.

Underweight. The analyst expects the fundamental conditions of the sector to be negative over the next 12 months.

Country (Strategy) Recommendations

Overweight (O). Over the next 12 months, the analyst expects the market to score positively on two or more of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.

Neutral (N). Over the next 12 months, the analyst expects the market to score positively on one of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.

Underweight (U). Over the next 12 months, the analyst does not expect the market to score positively on any of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.
