### Highlights

- We attended the site visit today at the Narasiri Bangna Km.10 project, which is valued at THB4.1b. It is the flagship ultra-luxury projects this year, launched on 24–25 May, and developed as the first JV project with the Mitsui Fudosan Group. The project offers 56 units of luxury detached houses, with selling prices ranging from THB60m to THB150m per unit. Apart from the strong brand and the signature luxurious design, another key selling point lies in its prime location within the Sansiri 10 East community at Bangna Km.10.
- To date, this project has generated presales of three units totaling THB200m, with one unit (THB60m) already transferred in 2Q26 and the other two scheduled for transfer in 3Q26. The customers are primarily real demand buyers who are familiar with the location. Meanwhile, the company remains focused on managing its inventory in line with demand, with 13 ready-to-move-in units currently available totaling around THB1b.
- SIRI maintains its 3Q25 presales target of THB9.0b, up from THB7.8b in 2Q25, but down from THB10.3b in 3Q24. Meanwhile, Jul–Aug presales were moderate at THB6.5b, comprising 48% from low-rises and 42% from condos. Low-rise presales remained sluggish, similar to 2Q25, due to the absence of new launches and weak demand. However, condo presales showed an improving trend, supported by the unusually low base in 2Q25 and an increase in new launches.
- The company has already introduced three new condo projects in 3QTD: 1) Valles Haus (THB2.8b), a low-rise condo that exceeded its target with a take-up rate of 40%; 2) Widen by Sansiri (THB3.1b), which was soft-launched in Sep and achieved a take-up rate of 16%, with its official launch scheduled for Oct-25; and 3) The BASE Urban Rama 9 (THB1.7b), which has a take-up rate of 10% and transfers scheduled for Oct-25. The company also plans to launch another condo, XELF by Sansiri (THB4.9b), in late Sep-25, while the new low-rise project, Saransiri Chatuchot (THB2.4b), might be delayed from 3Q25 to 4Q25.
- SIRI's 2H25 earnings should improve h-h, with 4Q25 expected to be the peak of the year, driven by a greater number of newly completed condos. We preliminarily project 3Q25 profit to be flat q-q and down y-y. Transfers are expected to slightly decline q-q, as most new condos are scheduled to begin transfers in late Sep, while property GPM is likely to remain below 30%. However, SIRI may record extra gains from a land sale to a new JV project in 3Q25.
- We maintain our 2025 core profit forecast at THB4.2b (-14% y-y). The share price had rallied sharply over the past two weeks, but 3Q25 earnings are expected to be lackluster.

| SET ESG Ratings List (SETESG) by The Stock Exchange of Thailand (SET)      | SET ESG quantifies responsibility in Environmental and Social issues by managing business with transparency in Governance, updated annually. Candidates must pass the preemptive criteria, with two crucial conditions: 1) no irregular trading of the board members and executives; and 2) free float of >150 shareholders, and combined holding must be >15% of paid-up capital. Some key disqualifying criteria include: 1) CG score of below 70%; 2) independent directors and free float violation; 3) executives' wrongdoing related to CG, social & environmental impacts; 4) equity in negative territory; and 5) earnings in red for > 3 years in the last 5 years.                                                                                                                                                                                                                                                                                                                                                             | To be eligible for <b>SETESG inclusion</b> , verified data must be scored at a minimum of 50% for each indicator, unless the company is a part of DJSI during the assessment year. The scoring will be fairly weighted against the nature of the relevant industry and materiality. <b>SETESG Index</b> is extended from the SET ESG Ratings companies whose 1) market capitalization > THB5b (~USD150b); 2) free float >20%; and 3) liquidity >0.5% of paid-up capital for at least 9 out of 12 months. The SETTHSI Index is a market capitalisation-weighted index, cap 5% quarterly weight at maximum, and no cap for number of stocks. |                                                                                                                               |              |         |                                                                                   |        |             |       |             |       |             |          |                                                                                                                               |    |             |   |             |     |             |          |                                                                                             |

| AGM level By Thai Investors Association (TIA) with support from the SEC    | It quantifies the extent to which shareholders' rights and equitable treatment are incorporated into business operations and information is transparent and sufficiently disclosed. All form important elements of two out of five the CG components to be evaluated annually. The assessment criteria cover AGM procedures before the meeting (45%), at the meeting date (45%), and after the meeting (10%). <i>(The first assesses 1) advance circulation of sufficient information for voting; and 2) facilitating how voting rights can be exercised. The second assesses 1) the ease of attending meetings; 2) transparency and verifiability; and 3) openness for Q&amp;A. The methodology considers the principle of financial materiality including information that significantly helps explain future risk-adjusted performance. Materiality is applied by over-weighting features with higher materiality and rebalancing these weights on a rolling quarterly basis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | The total ESG score is calculated as a weighted sum of the features scores using materiality-based weights. The score is scaled between 0 and 100 with higher scores indicating better performance.                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                               |              |         |                                                                                   |        |             |       |             |       |             |          |                                                                                                                               |    |             |   |             |     |             |          |                                                                                             |

## RECOMMENDATION STRUCTURE

### Stock ratings

Stock ratings are based on absolute upside or downside, which we define as  $(\text{target price}^* - \text{current price}) / \text{current price}$ .

**BUY (B).** The upside is 10% or more.

**HOLD (H).** The upside or downside is less than 10%.

**REDUCE (R).** The downside is 10% or more.

Unless otherwise specified, these recommendations are set with a 12-month horizon. Thus, it is possible that future price volatility may cause a temporary mismatch between upside/downside for a stock based on market price and the formal recommendation.

\* In most cases, the target price will equal the analyst's assessment of the current fair value of the stock. However, if the analyst doesn't think the market will reassess the stock over the specified time horizon due to a lack of events or catalysts, then the target price may differ from fair value. In most cases, therefore, our recommendation is an assessment of the mismatch between current market price and our assessment of current fair value.

### Industry Recommendations

**Overweight.** The analyst expects the fundamental conditions of the sector to be positive over the next 12 months.

**Neutral.** The analyst expects the fundamental conditions of the sector to be maintained over the next 12 months.

**Underweight.** The analyst expects the fundamental conditions of the sector to be negative over the next 12 months.

### Country (Strategy) Recommendations

**Overweight (O).** Over the next 12 months, the analyst expects the market to score positively on two or more of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.

**Neutral (N).** Over the next 12 months, the analyst expects the market to score positively on one of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.

**Underweight (U).** Over the next 12 months, the analyst does not expect the market to score positively on any of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.
